The Normative Status of Time Bias Kristie Miller, 2024-12-10 This book empirically investigates the nature of time biases Many philosophers think that it is rationally permissible to prefer a life that is overall worse to one that is overall better as long as the badness of that life lies in the past rather than the future These philosophers think that it is rationally permissible to be time biased Time biased individuals differently value the wellbeing of their various selves in virtue of where those selves are located in time This book focuses on three key kinds of time bias near present and future bias It presents a rich picture of the conditions under which we display these biases and it outlines several psychological explanations for them It then uses this new empirical research we conducted to inform arguments regarding the normative status of these biases At its heart it considers the question does having time biased preferences of one sort or another make us better off or worse off And it uses the answers to these questions to inform our theorising about whether we have reason either to have or to avoid having such preferences

Events and Semantic Architecture Paul M. Pietroski, 2005 This book explores how grammatical structure is related to meaning The meaning of a phrase clearly depends on its constituent words and how they are combined

But how does structure contribute to meaning in natural language Does combining adjectives with nouns as in brown dog differ semantically from combining verbs with adverbs as in barked loudly What is the significance of combining verbs with names and quantificational expressions as in Fido chased every cat In addressing such questions Paul Pietroski develops a novel conception of linguistic meaning according to which the semantic contribution of combining expressions is simple and uniform across constructions Drawing on work at the heart of contemporary debates in linguistics and philosophy the author argues that Donald Davidson's treatment of action sentences as event descriptions should be viewed as an instructive special case of a more general semantic theory The unified theory covers a wide range of examples including sentences that involve quantification plurality descriptions of complex causal processes and verbs that take sentential complements Professor Pietroski also provides freshways of thinking about much discussed semantic generalizations that seem to reflect innately determined aspects of human languages Designed to be accessible to anyone with a basic knowledge of elementary logic Events and Semantic Architecture will interest a wide range of scholars in linguistics philosophy and cognitive science
