

The background of the slide is a complex, abstract graphic design. It features several stylized, overlapping faces in shades of gray and white. The faces are composed of smooth, flowing lines and organic shapes, giving them a dreamlike, ethereal quality. Some faces are more prominent than others, with clear eyes and features, while others are partially obscured or blended into the background. Interspersed among the faces are numerous circular and oval shapes of varying sizes, some with a gradient, suggesting spheres or bubbles. The overall composition is dense and layered, creating a sense of depth and movement. The title text is centered in a white rectangular box, providing a clear contrast to the busy background.

**The Fourth Dimension and Non-Euclidean Geometry in Modern Art, revised edition**

Linda Dalrymple Henderson, 2018-05-18 The long awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art In this groundbreaking study first published in 1983 and unavailable for over a decade Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception the curved spaces of non Euclidean geometry and most important a higher fourth dimension of space were central to the development of modern art The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher dimensional existence That iconoclastic idea encouraged radical innovation by a variety of early twentieth century artists ranging from French Cubists Italian Futurists and Marcel Duchamp to Max Weber Kazimir Malevich and the artists of De Stijl and Surrealism In an extensive new Reintroduction Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000 Although largely eclipsed by relativity theory beginning in the 1920s the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s In a remarkable turn of events it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics with its ten or eleven dimensional universes and computer graphics Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller Robert Smithson and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak
