The Failure of Markets Craig Allan Medlen,2022-03-02 The core thesis of this book is that the major economic issues of renewable energy housing health and income disparities could best be addressed through direct government in kind production and redistributive measures It is argued that this governmental in kind production of essential needs would allow a rapid movement towards solutions that the market cannot possibly match The market works through indirect means So it is no mystery why in the areas of energy housing and health problems are not only formidable but in many respects are getting worse In contrast governmental in kind production would be direct Outcomes could be explicitly planned and managers would be publicly accountable This shift in production should be accompanied by redistributive measures through higher taxes on corporations and the rich and the possible adoption of monetary policies in line with Modern Monetary Theory MMT Relatedly the book demonstrates that the current lack of imaginative solutions results from a paralysis of imagination rooted deeply in nineteenth century liberalism that held that the market was to serve all issues A progressive agenda today needs to separate out needs from wants and to engage government production in the service of collectivist needs In kind production would infuse a democratic component within the economy The last chapter of the book also deals with how the ideology of neoliberalism blocks even the contemplation of governmental production in the service of people s needs This accessible work will be of significant interest to anyone seeking original solutions to age old problems particularly readers of public policy heterodox economics progressive politics and MMT More generally it is of interest to scholars

[The Oxford Handbook of the History of Mathematics](#) Eleanor Robson,Jacqueline Stedall,2008-12-18 This Handbook explores the history of mathematics under a series of themes which raise new questions about what mathematics has been and what it has meant to practice it It addresses questions of who creates mathematics who uses it and how A broader understanding of mathematical practitioners naturally leads to a new appreciation of what counts as a historical source Material and oral evidence is drawn upon as well as an unusual array of textual sources Further the ways in which people have chosen to express themselves are as historically meaningful as the contents of the mathematics they have produced Mathematics is not a fixed and unchanging entity New questions contexts and applications all influence what counts as productive ways of thinking Because the history of mathematics should interact constructively with other ways of studying the past the contributors to this book come from a

diverse range of intellectual backgrounds in anthropology archaeology art history philosophy and literature as well as history of mathematics more traditionally understood The thirty six self contained multifaceted chapters each written by a specialist are arranged under three main headings Geographies and Cultures Peoples and Practices and Interactions and Interpretations Together they deal with the mathematics of 5000 years but without privileging the past three centuries and an impressive range of periods and places with many points of cross reference between chapters The key mathematical cultures of North America Europe the Middle East India and China are all represented here as well as areas which are not often treated in mainstream history of mathematics such as Russia the Balkans Vietnam and South America A vital reference for graduates and researchers in mathematics historians of science and general historians
