## **The Great Living System The Religion Emerging From The Sciences:**

**The Great Living System** John Ruskin Clark,1984      Science and the Search for God Gary A. Kowalski,2003 Harvard educated theologian Gary Kowalski argues that many of the ills of the modern world from the rise of fundamentalist intolerance to secular society's endless and empty search for thrills stem from the mistaken view that science and faith are antagonists rather than natural allies Both science and faith the author suggests compel us now to move beyond materialism toward an understanding of the world that includes the realities of consciousness and spirit In the twenty first century human beings have less reason than before to feel they hold a privileged or special position in the cosmos but more cause than ever to feel connected and akin to all that is Christians and Jews skeptics and seekers alike will find that this brief persuasively written volume sheds new light on the old questions Who are we Where do we figure in the larger scheme of things And what can we honestly believe

**World Religions and the New Era of Science** Janak Singh,2010-07-22 Since ancient times the enduring religious concepts of love your fellow being live truthfully and do to others what you would like them to do to you have laid the foundations of the laws of civilized human societies The presence of a supernatural power and its feeling at a personal level has been a source of inspiration and emotional satisfaction for the spiritual believer The spiritual enhancement reinforced the human mind to achieve greater goodness in the conduct of life All religions have contributed significantly in shaping humanity and they continue to do so World religions have a common spiritual heritage to guide us on the path of a purposeful life of kindness peace and harmony in spite of differences in languages cultures and historical origins Science has demystified the awe of natural phenomenon like earthquakes volcanic eruptions and violent storms It has eradicated many ailments and created amenities to facilitate life in numerous ways It has helped in the religious mission of a happier life Benefits of science and technology are available to everybody The geographic barriers have been shrunk for our global township of diverse cultures and faiths However science has also produced the menace of thermonuclear and biological weapons capable of global devastations In this new era of science religion has a greater role to play for education in universal awakening to purge prejudice and antagonism that trigger conflicts and wars Religion and science have a new paradigm for humanity Live and help to live

**Meanings of War and Peace** Francis A. Beer,2001 When the stakes of public words and actions are global and permanent and especially when they involve war and peace can we afford not to seek their meaning For three decades Francis Beer has pioneered the effort to discover describe and connect pieces of the complex puzzle of war peace their interrelationship and their causes In this volume Beer joined by colleagues as co authors of some chapters examines the cognitive behavioral and linguistic dimensions of war and peace Language he shows is important because it mediates between thought and action It expresses beliefs about war and peace and affects the perceptions of potential adversaries about one's own intentions Using multiple perspectives and methods he explores the uses of communication in international relations and the development of meaning for war and peace In this unique and

innovative post realist analysis Beer examines how language transmits and creates meaning through interaction with specific audiences His case studies include the Somalian intervention Sarajevo and the Balkan conflict and the Gulf War Moving beyond the discrete words of war the book takes a broader view of how political participants interact in war and peace through continuous streams of communication that reflect and construct worlds of meaning This stimulating and challenging volume brings together insights and evidence from political science cognitive psychology linguistics history and rhetorical studies and applies them in a focused way to the problem of war and peace      *Toward an Ethic of Citizenship* William K. Dustin, 2000-01-11 The idea for this book arose out of a little known political scandal known as phonegate that occurred in Minnesota in the early 1990 s in which a number of legislators were found to have been abusing their phone privileges The hubris of the legislature in response to the discovery of this abuse not only made me rather angry but since I had been called for jury duty the year before gave me the idea that service in the legislature ought to be a duty of citizenship like jury duty Although the idea of the citizen legislature goes back to Aristotle serious consideration of it raises the question of what is meant by citizenship and representation This book addresses that question It is an attempt to develop a model of citizenship in which representation is simultaneously a fundamental right and the highest obligation After developing these ideas at a rather high level of abstraction the book concludes with a proposed constitutional amendment for the State of Minnesota to illustrate how the model will work in practice      **Rebirth of the Sacred** Robert Nadeau, 2012-11-06 Argues that a new dialogue between truths of science and religion provides a basis for articulating and disseminating an environmental ethos which could result in the fairly rapid emergence of well organized and highly effective worldwide movement in religious environmentalism      Science and Religion Lucas F. Johnston, Whitney Bauman, 2014-02-05 This collection offers new perspectives on the study of science and religion bringing together articles that highlight the differences between epistemological systems and call into question the dominant narrative of modern science The volume provides historical context for the contemporary discourse around religion and science detailing the emergence of modern science from earlier movements related to magic and other esoteric arts the impact of the Reformation on science and the dependence of Western science on the so called Golden Age of Islam In addition contributors examine the impacts of Western science and colonialism on the ongoing theft of the biological resources of traditional and indigenous communities in the name of science and medicine The volume s multi perspectival approach aims to refocus the terms of the conversation around science and religion taking into consideration multiple rationalities outside of the dominant discourse      **Spiritual Insights From The New Science: Complex Systems And Life** Raima Larter, 2021-05-05 *Spiritual Insights from the New Science* is a guide to the deep spiritual wisdom drawn from one of the newest areas of science the study of complex systems The author a former research scientist with over three decades of experience in the field of complexity science tells her story of being attracted as a young student to the study of self organizing systems where she encountered the strange and beautiful topics of chaos

fractals and other concepts that comprise complexity science Using the events of her life she describes lessons drawn from this science that provide insights into not only her own life but all our lives These insights show us how to weather the often disruptive events we all experience when growing and changing The book goes on to explore through the unfolding story of the author's life as a practicing scientist other key concepts from the science of complex systems cycles and rhythms attractors and bifurcations chaos fractals self organization and emergence Examples drawn from religious rituals dance philosophical teachings mysticism native American spirituality and other sources are used to illustrate how these scientific insights apply to all aspects of life especially the spiritual Spiritual Insights from the New Science shows the links between this new science and our human spirituality and presents in engaging accessible language the argument that the study of nature can lead to a better understanding of the deepest meaning of our lives

Describing the Dynamics of "Free" Material Components in Higher-Dimensions Dr. Martin Concoyle, 2014-01-16 This book is an introduction to the simple math patterns used to describe fundamental stable spectral orbital physical systems represented as discrete hyperbolic shapes The containment set has many dimensions and these dimensions possess macroscopic geometric properties which are discrete hyperbolic shapes Thus it is a description that transcends the idea of materialism i e it is higher dimensional and it can also be used to model a life form as a unified high dimension geometric construct which generates its own energy and which has a natural structure for memory where this construct is made in relation to the main property of the description being the spectral properties of both material systems and of the metric spaces that contain the material systems where material is simply a lower dimension metric space and where both material components and metric spaces are in resonance with the containing space

**Religion and Science from Galileo to Bergson** J. C. Hardwick, 2019-12-03 In Religion and Science from Galileo to Bergson J C Hardwick delves into the intricate interplay between science and religion from the Renaissance to the early twentieth century This scholarly work offers a meticulous examination of seminal figures including Galileo Newton and Bergson portraying how their groundbreaking ideas often challenged and shaped contemporary theological views Hardwick employs a critical yet accessible literary style intertwining historical narrative with philosophical analysis to elucidate the evolving paradigms that unified and divided these two intellectual domains The book situates itself within the broader discourse of the scientific revolution and modern philosophical thought making it a crucial contribution to the fields of intellectual history and the philosophy of science J C Hardwick a prominent historian of ideas draws upon his extensive academic background to uncover the nuanced relationships between established religions and scientific advancements His insights are informed by a rich tapestry of previous scholarship as well as personal reflections on the parallels between historical conflicts and contemporary debates in the realms of science and faith Hardwick's passion for unraveling the complexities of this dynamic relationship is palpable throughout the text This book is highly recommended for scholars students and general readers with an interest in the historical dialogue between religion and science Hardwick's engaging

narrative and comprehensive analysis make it an essential resource for understanding the ideological battles and reconciliations that have shaped human thought across centuries

**The Comprehensive Guide to Science and Faith** William A. Dembski, Casey Luskin, Joseph M. Holden, 2021-10-05 Science and Faith Can and Do Support Each Other Science and Christianity are often presented as opposites when in fact the order of the universe and the complexity of life powerfully testify to intelligent design With this comprehensive resource that includes the latest research you ll witness how the findings of scientists provide compelling reasons to acknowledge the mind and presence of a creator Featuring more than 45 entries by top caliber experts you ll better understand how scientific concepts like intelligent design are supported by evidence the scientific findings that support the history and accounts found in the Bible the biases that lead to scientific information being presented as a challenge rather than a complement to Christianity Whether you re looking for answers to your own questions or seeking to explain the case for intelligent design to others The Comprehensive Guide to Science and Faith is an invaluable apologetic tool that will help you explore and analyze the relevant facts research and theories in light of biblical truth

*Living by Surprise* Woody Bartlett, 2003 Woody Bartlett a theologian and environmentalist posits a new Christ centered cosmology founded upon four Dynamics Being Belonging Becoming and Surprise to bring the earth into harmony Being Bartlett proffers is essence Belonging is the Being s place among other Beings Becoming is the intent of both Being and Belonging Surprise is the unexpected unfolding of the intent Humanity Bartlett explains violates the four dynamics and Jesus is the perfect embodiment of the four Dynamics

**Falling for Science** Bernard Beckett, 2011-11-01 Brilliant examination of evolution vs creationism and of Intelligent Design by an award winning author What is consciousness Is evolution compatible with traditional religion Does time exist or is it just our way of ordering experiences Could a machine ever think What do scientists really mean when they call something a fact Modern science has unravelled the mystery of life seen back to the dawn of time and peered down into the weird world of quantum mechanics Small wonder then that people now look to science to answer the big metaphysical questions In Falling for Science Bernard Beckett shows this instinct to be misguided According to Beckett the modern fashion for making scientists the High Priests of Everything is mysticism in a lab coat Here the author argues for a new model of scepticism one which leaves scientists and story tellers to each get on with what they re best at Beckett is a powerful persuasive communicator who writes in the contemporary vein of popular science writers like Matt Ridley Steven Pinker and Jared Diamond With wit and not a little irreverence Beckett offers a history of the ideas behind recent scientific development and introduces the reader to arguments about the nature of consciousness evolutionary biology artificial intelligence and more Brilliantly unsettling Falling for Science is compulsively readable

**The Cosmic Breath** Amos Yong, 2012-05-10 Recent thinking in the interfaith dialogue and in the theology science dialogue have taken a pneumatological turn The Cosmic Breath explores this pneumatological theology as unfolded in the

Christian Buddhist dialogue alongside critical interaction with the theology and science conversation As an attempt in comparative and constructive Christian philosophical theology its central thesis is that a pneumatological approach to Buddhist traditions in further dialogue with modern science generates new philosophical resources that invigorate Christian thinking about the natural world and humanity's place in it The result is a transformation of the Buddhist Christian dialogue from insights generated in the theology and science interface and a contribution to the religion and science dialogue from a comparative theological and philosophical perspective

*God and the New Atheism* John F. Haught, 2008-02-15 In *God and the New Atheism* a world expert on science and theology gives clear concise and compelling answers to the charges against religion laid out in recent best selling books by Richard Dawkins *The God Delusion* Sam Harris *The End of Faith* and Christopher Hitchens *God Is Not Great* For some these new atheists appear to say extremely well what they believe to be wrong with religion But as John Haught shows the treatment of religion in these books is riddled with logical inconsistencies shallow misconceptions and crude generalizations Can God really be dismissed as a mere delusion Is faith really the enemy of reason And does religion really poison everything *God and the New Atheism* offers a much needed antidote to the extremist claims of scientific fundamentalism This provocative and accessible little book will enable readers to see through the rhetorical fog of this recent phenomenon and come to a clearer understanding of the issues at stake in this crucial debate

**Reaching for the New Jerusalem** Seong Hyun Park, Aida Besancon Spencer, William David Spencer, 2013-08-02 The task of this book is to examine the biblical and theological meaning of the city and our mission within it It starts with the premise that the garden is lost and we are headed toward the New Jerusalem the city of God In the meanwhile we dwell in earthly cities that need to be adjusted to God's city The fall has conditioned us to fear the city though historically God intended it to provide safety even refuge We have to band together and act to take back our communities if we are to help God in the divine task of reconciling the world to Godself by assisting God in adjusting our communities to God's New Jerusalem rebuilding our own cities of Enoch on the blueprints of Christ to go into all the world and share his good news building the Christian community along the lines of the New Jerusalem a city of light in which God is revealed from the Introduction by William David Spencer Toward achieving this goal this single accessible volume brings together the biblical the systematic and the practical aspects of urban ministry by various contributors who are urban practitioners and theologians themselves and have taught at Gordon Conwell Theological Seminary Boston Campus

**The Credibility of Science and Religion** Paul Weingartner, 2025-01-27 Weingartner compares criteria and basic assumptions for the credibility of scientific and religious belief systems It is shown that mankind has access to basic knowledge about a higher spiritual power and knowledge by conscience about what is obligatory or forbidden This is defended by further axiomatizations on basic terms as natural goods natural and moral law and conscience Scientific and religious belief systems are then compared thoroughly and by logical deduction and verisimilitude One main argument is that every kind of belief

system has an upper and a lower bound of credibility yet a degree of credibility that leads to the impossibility of rational justification for scientific belief systems must not be required from religious belief systems Further topics are internal and external consistency local refutation mutual complementation between religion and theory of evolution as well as a comparison of the five world religions leading to general features of religion It is shown that one main yet basic axiom of morality is the principle of charity Finally the book concludes with the credibility requirements of science towards religion and those of religion towards science

**“The” Athenaeum** ,1861      **Science and the Sacred** C. S. Pearce,Philip Clayton,2025-02-27

In this beautifully written book an atheist and a theist explore the intersection points of science and the Sacred Honestly acknowledging their differences they discover unexpected common ground across every branch of science and many of the most urgent ethical and spiritual questions humanity now faces While science may be incompatible with some ancient beliefs about God the authors show why it is fully compatible with belief in an all pervading divine presence Indeed we will only be able to steer our way safely through the complexities of the modern world when we draw on the best of scientific knowledge as well as the deepest insights of the world s spiritual traditions past and present This unique exploration by a theologian and a well known science journalist offers a highly accessible overview of the most complex issues arising at the intersection of science belief and hope The two authors dive into debates normally deemed too sensitive to discuss identifying common sense ways that science and human values can guide each other Their emerging friendship and their new insights offer a pathway toward a world no longer plagued by religiously motivated violence and environmental crisis
