How High the Sky? Thomas Gangale,2018-11-26 In How High the Sky jurist Thomas Gangale explores the oldest and most important controversy in space law how far up does national airspace go and where does the international environment of outer space begin Even though nations did not object to the first satellites flying over their sovereign territory after more than six decades there is still no international agreement on how low the right of space object overflight extends nor are there agreed legal definitions of space object and space activity Dr Gangale brings his background as an aerospace engineer to bear in exploding long held beliefs of the legal community and he offers a draft international convention to settle the oldest and most intractable problems in space law *The Sky's the Limit* Simon Bishop,Tony Grayling,2003 The Sky's the Limit Mark J. F. H. Allen,Thomas B. Starr,2017-11-15 Although complexity surrounds us its inherent uncertainty ambiguity and contradiction can at first make complex systems appear inscrutable Ecosystems for instance are nonlinear self organizing seemingly chaotic structures in which individuals interact both with each other and with the myriad biotic and abiotic components of their surroundings across geographies as well as spatial and temporal scales In the face of such complexity ecologists have long sought tools to streamline and aggregate information Among them in the 1980s T F H Allen and Thomas B Starr implemented a burgeoning concept from business administration hierarchy theory Cutting edge when Hierarchy was first published their approach to unraveling complexity is now integrated into mainstream ecological thought This thoroughly revised and expanded second edition of Hierarchy reflects the assimilation of hierarchy theory into ecological research its successful application to the understanding of complex systems and the many developments in thought since Because hierarchies and levels are habitual parts of human thinking hierarchy theory has proven to be the most intuitive and tractable vehicle for addressing complexity By allowing researchers to look explicitly at only the entities and interconnections that are relevant to a specific research question hierarchically informed data analysis has enabled a revolution in ecological understanding With this new edition of Hierarchy that revolution continues Handbook of Air Quality and Climate Change Hajime Akimoto,Hiroshi Tanimoto,2023-09-27 This handbook covers the air quality air pollution from the viewpoints of causing impacts on human ecosystem health and climate change Traditionally air pollution has been a concern mainly in terms of its impacts on human health and it is still an immediate public and governmental concern in most Asian countries However in recent years so called extreme weather events such as stronger tropical cyclones flooding drought and other phenomena have been manifested causing tremendous losses of human lives and properties Importantly climate models tell us that such extreme weather events are actually induced by anthropogenic global warming It has been pointed out that mitigation or alleviation of such climate change leading to the extreme weather events in the next 30 years can be possible only by reducing air

pollutants with positive radiative forcing such as ozone or methane which are called short lived climate pollutants SLCPs Here concerns about mitigation of air pollutants from the points of human health and climate change have merged This book covers different kinds of air pollutants and radiative forcers and how they can be measured It also mentions the situation of air pollutants in different continents and their regional impacts to human health environment and economy as well as their link to extreme weather events The book presents how the air pollution and climate change can be mitigated and how clean air technologies and international initiatives for co controlling air pollution and climate change have been developed
