## Skyscrapers Architects:

**Manhattan Skyscrapers** Eric Nash, 1999-08 The city of New York is the city of skyscrapers Every first time visitor to Manhattan experiences the awe of gazing up at the soaring stone steel and glass towers of Wall Street or Midtown and wonders how those structures came to be built Manhattan Skyscrapers answers the question by presenting the 75 most significant tall buildings that make up the city's famous skyline From Louis Sullivan's Bayard Condict Building of 1898 on Bleeker Street to the Conde Nast tower currently rising above Times Square Manhattan Skyscrapers lavishly presents over a hundred years of New York's most interesting and important tall buildings Author Eric P Nash profiles familiar skyscrapers such as the Woolworth Building the Empire State Building the Chrysler Building the World Trade Towers the AT also included are quotes from the buildings architects and the architectural critics of the time Each skyscraper is illustrated with full page color photographs by noted photographer Norman McGrath as well as architectural drawings and plans archival images of the original interiors postcards and other ephemera Manhattan Skyscrapers is essential reading or an ideal gift for anyone interested in the buildings that make New York the ultimate skyscraper city Skyscrapers John Zukowsky, Martha Thorne, 2000 A global survey demonstrating the continued importance of the skyscraper reaching well beyond the bounds of Asia North America and Europe to incorporate less familiar sites as far afield as Saudi Arabia Lebanon and the United Arab Emirates as well as Uruguay and Mexico The introduction offers an overview of the architectural and economic trends that have affected the skyscraper at the close of the 20th century and the epilogue discusses the race for the world's tallest building in the first years of the 21st Century *Skyscrapers* George H. Douglas, 2004-08-19 This history of skyscrapers examines how these tall buildings affected the cityscape and the people who worked in lived in and visited them Much of the focus is rightly on the architects who had the vision to design and build America's skyscrapers but attention is also given to the steelworkers who built them the financiers who put up the money and the daredevils who attempt to conquer them in some inexplicable pursuit of fame The impact of the skyscraper on popular culture particularly film and literature is also explored *Skyscrapers of the Future* Carlo Aiello, 2011-01-01 No other architectural genre captures our imagination and reflects our cultural and technological achievements like these towers that pierce the sky We start off with the history and evolution of building high from the Egyptian pyramids Gothic cathedrals and first American skyscrapers to the contemporary reality in Asia and the Middle East We present two fascinating interviews the first one with Carol Willis the founder and director of the Skyscraper Museum in New York City who explains the true genetics and economics behind the birth and future of the skyscraper The second one with Italian artist Giacomo Costa who shares his vision about the relationship between the natural environment human activity and supernatural reality with provocative images of an apocalyptic urban future Javier Quintana exposes the time gap between new architectural concepts and their built reality like Arne Hisek's City of the Future designed in 1928 and materialized in 1998 by Cesar Pelli as the Petronas Towers in Kuala Lumpur or Sergei

Lopatin's 1925 idea for the Veshenka Tower in Moscow later observed as the Willis Tower former Sears Tower in Chicago in 1974 Another group of essays explore the global influence of Manhattan as a contemporary Babylon to be replicated across the world or the role of the Italian Futurists Japanese Metabolists and Archigram who influenced generations of architects and designers to push forward the concept of vertical living In the Opinion section you will find critiques on some of the latest ideas for skyscraper design by some of the most forward looking architects like the concept of pixilated tectonics in Le Project Triangle in Paris by Herzog while Morphosis Architects explores new programs for vertical density with The Phare Tower Lastly Studio SHIFT masterfully integrates their Miya Tower in Sichuan China with the existing landscape Central to this book are thirty projects from eVolo's 2009 Skyscraper Competition which look into the future of the skyscraper with the use of new technologies programs and aesthetic expression Sustainability globalization flexibility and adaptability are just some of the multi layered elements explored by some the entries You will find examples of cities in the sky horizontal skyscrapers that link various cities or emergency architecture for disaster zones **Skyscrapers** Matthew Wells, 2005 An investigation of thirty skyscrapers from around the world both recently built and under construction that explains the structural principles behind their creation **Skyscrapers** Matthew Wells, 2005-01-01 An investigation of thirty skyscrapers from around the world both recently built and under construction that explains the structural principles behind their creation

**How to Build a Skyscraper** John Hill, 2023-04-15 An architectural expert tours 46 of the world's most significant skyscrapers A useful ready reference work and a treat for architecture buffs Booklist Handsome color photographs fact packed summaries and crisp drawings especially a lucid cutaway look at each skyscraper enhance his bite sized blocks of text This book stays true to its title probing beneath the skin of skyscrapers to reveal their structural bones and the other things that shape them It's a fine primer especially for skyscraper geeks in search of a vicarious round the world tour Chicago Tribune This distinctive book is the most comprehensive collection of modern skyscrapers published in the last 20 years Skyscrapers have been piercing the clouds since the end of the nineteenth century but today's soaring land prices are driving developers to build bigger better and higher while aiming for as small a footprint as possible The lavish spreads feature a large photograph with cross section drawings plus fact boxes listing location year of completion height stories primary functions owner developer architect structural engineer and construction firm Concise text describes historical context unusual or innovative construction engineering and structural systems foundation facade and shape the site history and building usage as well as any special features that make the skyscraper unique For example The Gherkin at 30 St Mary Axe London UK surprisingly has only one piece of curved glass despite its rounded shape The 46 skyscrapers in How to Build a Skyscraper appear not for their height but for their pioneering technology sustainability and other characteristics that set them apart They are distributed over the world's most developed regions of North America Europe Asia and Australia
