Basic Sleep Mechanisms is a collection of studies about the different mechanisms that facilitate the process of sleep. The studies, despite being made by experts of different subspecialties, are more purposed for general interest. The book is divided into four parts. Part I covers the concepts under the neurophysiological mechanisms of sleep, such as the sleep-wake cycle, pontine stimulations of sleep, and the role of different parts of the nervous system in sleep. Part II includes topics under the neurochemical aspects of sleep and the role of monoaminergic neurons in it. Part III discusses the different three states of the adult human body, the direction in its research, and its psychological aspect. Part IV explains the developmental aspects of sleep, especially in infants and children. The text is recommended for neurologists, doctors, and psychologists who want to know more about the study or to conduct their own study about sleep, the principles behind it, and its development.

Neurological Modulation of Sleep Ronald Ross Watson, Victor R. Preedy, 2020-01-15. Neurological Modulation of Sleep provides readers with updated scientific reviews regarding the interaction between sleep and contributing factors, with special attention paid to the potential for neurological modulation of sleep via diet. With 30 international contributors, this book aims to provide readers with a unique global perspective on the role these factors play in sleep architecture and its regulation by circadian biology and neurology. Sleep disorders have become an increasing problem plaguing more than 70 million Americans according to the American Sleep Association. There is a clear association between sleep disorder and a wide range of other human disorders, performance deficiencies, psychiatric illnesses, heart disease, obesity, and more. But in spite of this, there is not yet a convenient overview on the market detailing the impact of obesity, age, diabetes, and diet on sleep duration and attendant health outcomes. Describes the impact of diet, caffeine, and physical activity on sleep. Reviews the neurology and metabolism of sleep. Identifies what foods impact sleep and how. Discusses the clinical use of nutraceuticals to improve sleep.

Clinical Physiology of Sleep Ralph Lydic, Julien F. Biebuyck, 2013-05-27 ROBERT WILLIAM McCARLEY Laboratory of Neuroscience Department of Psychiatry Harvard Medical School Boston and Brockton V A Medical Center Brockton Massachusetts The alternation of waking and sleeping the daily course of the advancing and receding tides of consciousness has long been a familiar part of our experience But it is a new idea that autonomic and respiratory physiology are equally and dramatically altered in a parallel fashion and it is this concept that is summarized and developed here The editors have drawn together thematically related chapters written by researchers with direct experience and a high level of expertise in the areas they address The main theme is the relationship of general physiological alterations during sleep to cellular physiology and to the pathology of sleep What is distinctive and especially appealing about this book on sleep is its emphasis on the autonomic and respiratory systems This volume is I believe the first to explore these topics systematically and to blend the nomenclological description with possible cellular mechanisms and ties to clinical pathology As such this book should find an important place in the library of workers in the fields of sleep research autonomic and respiratory physiology and related neuroscience disciplines it also belongs in the library of clinicians concerned with the disorders of sleep This overview of topics and chapters gives an indication of their cath

 problem of present day research workers especially in the life sciences is the plethora of publications of all kinds abstracts
 short communications full papers in journals of varying quality reviews and proceedings of symposia with in addition an
 unprecedented duplication of publications Even for experts working in the field it is almost impossible to keep an up to date
 view of all current research articles The Western grant and career system encourages scientists to publish as much as
 possible The editors and publishers of our new series are convinced that the format of Current Topics in Neuroendocrinology
 leads a way out of this confusion Each volume is conceived as a concise up to date textbook on one well defined and currently
 exciting subject Different from classic textbooks however the speed of publication compares favorably with that of many
 journals this ensures an immediacy which is im possible in textbooks On the other hand topics to be included in this series
 are also sufficiently reliable with enough work being done to treat them from several aspects Each volume will supply four to

six chapters treating such a broad topic as neuroendocrinology from several points of view for example anatomic electrophysiologic endocrine and behavioral views Where clinical data are immediately available they will be included No other 360es treating the nervous or endocrine systems provides such a coordinated set of chapters on an interesting topic in each volume *Neural Mechanism and Effect of Acupuncture for Central Nervous System Diseases* Guanhu Yang, Cunzhi Liu, Xiang-Hong Jing, Weixing Pan, Qinhong Zhang, 2024-05-07 Central nervous system CNS diseases such as stroke Parkinson's disease vascular dementia Alzheimer's disease multiple sclerosis bulbar palsy spinal cord injury traumatic brain injury brain tumor cerebral palsy headache migraine epilepsy depression anxiety etc involve complex neural mechanism and seriously affect quality of life and threaten life safety in patients with these disorders Multiple neural techniques such as functional magnetic resonance imaging positron emission tomography electroencephalography etc provide powerful tools for uncovering complex networks of neural mechanism and exploring key potential biomarkers to reveal the underlying neural feature of those disorders *Biology of Sleep Substances* Shojiro Inoue, 2020-08-11 All aspects of sleep sciences are included in this excellent resource text with special reference to sleep substances and sleep modulators The historical development of the theories of sleep are reviewed in conjunction with the technical problems All candidate substances are overviewed as to their sites of presence chemical nature bioassay techniques physiological and pharmacological effects On the basis of a standardized methodology developed by the author sleep modulatory characteristics of some substances are compared and evaluated in quantitative terms The sleep regulatory mechanisms which are composed of complex neurohumoral subsystems are analyzed from the results of recent neurophysiological and neuroendocrinological experiments Furthermore an evolutionary aspect of sleep substances is taken into consideration Chapters Highlight Techniques for isolation and evaluation Prostaglandins Paradoxical sleep factors Sleep promoting substances and nucleosides
