patterns and compare them with instances of illness scripts of patients the clinician has seen in the past and stored in memory CBCR stimulates the development of early rudimentary illness scripts through elaboration and systematic discussion of the courses of action from the initial presentation of the patient to the final steps of clinical management The book combines general backgrounds of clinical reasoning education and assessment with a detailed elaboration of the CBCR method for application in any medical curriculum either as a mandatory or as an elective course It consists of three parts a general introduction to clinical reasoning education application of the CBCR method and cases that can be used by educators to try out this method

executive brain functioning In the literature this is referred to as the bilingual advantage meaning that people who learn two or more languages seem to outperform monolinguals in executive functioning skills In this Special Issue we first present studies that investigate the bilingual advantage We also go one step further by focusing on factors that modulate the effect of bilingualism on cognitive control In the second smaller part of our Special Issue we focus on the cognitive reserve hypothesis with the aim of addressing the following questions Does the daily use of two or more languages protect the aging individual against cognitive decline Does lifelong bilingualism protect against brain diseases such as dementia later in life
