

A GENERAL DISCUSSION
ON
HOMOGENEOUS CATALYSIS

HELD IN THE PHYSICAL CHEMISTRY LABORATORY OF THE UNIVERSITY
OF CAMBRIDGE, ON FRIDAY AND SATURDAY, 28TH AND 29TH
SEPTEMBER, 1928.

PROFESSOR C. H. DESCH, D.Sc., F.R.S. (PRESIDENT) IN THE CHAIR.

INTRODUCTORY PAPER.

SOME PROBLEMS IN HOMOGENEOUS CATALYSIS.

PROFESSOR T. M. LOWRY.

Received 16th July, 1928.

I have been given this opportunity to explain the purpose of the Cambridge Discussion on Homogeneous Catalysis. This is the 50th discussion that has been arranged by the Faraday Society, and the second that has been held in this laboratory. The related problem of heterogeneous catalysis was discussed in London in 1921, and the special group of changes which are catalysed by the action of light was discussed at Oxford in 1925. We have also organised a discussion on the special problems of gaseous explosions, where both homogeneous and heterogeneous catalysis may play an important part. The present discussion may be expected to have as its mass-centre the problems of catalysis by acids and bases, on which a great deal of experimental work has been done since Ostwald first adopted the too-simple view that catalysis by acids is an exclusive property of the hydrogen ion. We have, however, deliberately given to the discussion a much wider scope than this particular aspect of the chemistry of aqueous solutions, and our first two reports necessarily touch on gaseous reactions.

The first report, by Mr. Hinshelwood, raises the question: Are uncatalysed reactions possible in simple systems? Seven years ago, in a discussion on the radiation hypothesis, I questioned the evidence for the existence of a real unimolecular reaction, in view of the fact that even the migration of a hydrogen atom in a labile compound can be arrested by careful purification. Since that time, however, evidence has been brought forward, mainly by Hinshelwood himself, but also by other workers in the same field, to show that complex molecules can be decomposed by heat alone, without the extraneous aid either of heterogeneous or of homogeneous catalysts, as typified by a glass surface and by water-vapour. Since these thermal decompositions are rather brutal, the current view of this problem may perhaps be summarised by saying that the purest sugar can be charred if you heat it enough, and to this proposition we should most of us instinctively assent; but, equally by instinct, we may wonder whether, in the

Metal-Catalyzed Oxidations of Organic Compounds Roger Sheldon, 2012-12-02 Metal Catalyzed Oxidations of Organic Compounds Mechanistic Principles and Synthetic focuses on the oxidative transformations of functional groups This book explores oxidation as being extensively used in the laboratory synthesis of fine organic chemicals and in the manufacture of large volume petrochemicals Organized into two parts encompassing 13 chapters this book starts with an overview of the mechanistic principles of oxidation reduction in biochemical organic and inorganic systems This text then proceeds with a discussion of the use of molecular oxygen hydrogen peroxide and alkyl hydroperoxides as primary oxidants Other chapters explore stoichiometric oxidations with metal oxidants which include permanganate and chromic acid This book discusses as well the synthetic applications of catalytic oxidations as well as the technology of petrochemical oxidation The final chapter deals with the autoxidations of sulfur phosphorus and nitrogen compounds This book is intended for chemists involved in organic synthesis catalysis and organometallic chemistry both in academic institutions and in industrial laboratories

The Physical Basis for Heterogeneous Catalysis Edmund Drauglis, 2013-11-21

THE PHYSICAL BASIS FOR HETEROGENEOUS CATALYSIS is the proceedings of the ninth Battelle Colloquium in the Materials Sciences held in Gstaad Switzerland September 2-6 1974 It took as its theme the application of modern theoretical and experimental surface physics to heterogeneous catalysis Progress in the field by classical chemical methods seemed to have slowed down at a time when the need for better catalysts was particularly great The Organizing Committee thought it might be possible to accelerate progress by the application of the powerful techniques evolved in recent years for studying atomically clean surfaces However the translation of ideas derived from clean single crystal surfaces with well characterized chemisorbed layers to real catalysts with high ratios of surface to mass on which reactions were taking place and requiring transport of mass and energy is a giant step raising many questions and requiring thorough discussion by surface physicists on the one hand and catalytic chemists on the other The 1974 Battelle Colloquium provided a forum for this exchange As its usual custom the Colloquium started the first day of introductory lectures by three distinguished scientists who have contributed importantly over many years to this field
