Skin Immune System Sis:

Skin Immune System (SIS) Jan D. Bos, 1997-04-10 Immunodermatology is a field covering the majority of skin diseases including the most prevalent ones in the general population. The Second Edition of Skin Immune System SIS discusses immune mediated skin diseases and disease groups in which the SIS plays a role. It covers major findings in immunophysiology and immunopathology that have occurred since the introduction of the First Edition in 1990. As the subtitle indicates, the Second Edition adds a new emphasis on cutaneous immunology and also includes new information on immune based therapeutic interventions and methods such as phototherapy and the immunological therapy of skin cancer. The book contains Part I with introductory chapters, Part II with descriptions of the cellular elements, and Part III which describes the humoral and molecular components of SIS. Part IV follows to integrate the facts described in Parts II and III into concepts of pathophysiology. It contains a number of concepts entitled response patterns that describe how the constitutional elements of SIS work together. New in this edition are the descriptions of immunodermatological diseases individually described in Part V. Part VI is also all new and summarizes principles of immunotherapy.

The Skin in Systemic Autoimmune Diseases Piercarlo Sarzi-Puttini, 2006-01-26 This book represents the state of the art in the field of skin and autoimmune rheumatic diseases. It covers systematically a growing and multifaceted topic which is of great importance.

in the clinical practice It also serves as a sharp educational tool as each chapter provides summaries and specific highlights to key references cited into the text The pathophysiological link between skin involvement and autoimmunity has been explained in detail as well as diagnostic and therapeutic aspects This book yields an impressive body of well ordered information which summarizes the experience of a selected panel of distinguished physicians and scientists actively involved in the field of skin immunology and systemic autoimmunity Written by a respected panel of distinguished physician scientists actively involved in the field of skin immunology and systemic autoimmunity Box summaries at the end of each chapter highlight important topics Up to date basic knowledge as well as modern approach to diagnosis and therapy

Neuroimmunology of the Skin Richard D. Granstein, Thomas A. Luger, 2009-02-08 Much anecdotal information has suggested an influence of psychology and the nervous system on immunity within the skin and the expression of inflammatory skin disorders Recent years have seen an explosion of knowledge providing a scientific basis for important regulatory interactions between the nervous system the endocrine system and the immune system within the skin The results of recent investigations have important implications not only for an understanding of cutaneous immunity but also for the development of novel treatments for diseases involving abnormal inflammation or immune reactivity within the skin This book provides a comprehensive and interdisciplinary review of the molecular biology cell biology biochemistry and clinical aspects of nervous system immune system interactions within the skin It includes contributions from leading world experts in these areas The contents are relevant to both investigators and clinicians interested in the skin its functions and its disorders

Clinical and Basic Immunodermatology Anthony Gaspari, Stephen K. Tying, 2008-11-05 Dermatologists are being asked to understand the pathophysiology of a number of immune mediated skin diseases In addition a number of new products have appeared on the market during the past decade which requires an understanding of the mechanisms of action of these drugs Dermatologists however have no easily understood book to which they can refer to regarding the disease or the drug

Skin Cancer after Organ Transplantation Eggert Stockfleth, Claas Ulrich, 2009-05-05 Organ transplantation has been performed for almost 40 years with steadily increasing success regarding long time survival of the graft as well as quality of life for the patient However graft tolerance only can be achieved via induction and maintenance of an impaired immunological surveillance An increase of skin cancers as a consequence of the lowered cellular immunoresponse seems to parallel the overall increased long time survival rate of organ transplant recipients Against the background of chronic immunosuppression known risk factors like the amount of sun exposure prior and post transplantation oncogenic viruses as well as the genetic background and place of residence latitude are strongly related with the increased skin cancer incidence The increasing incidence of non melanoma skin cancer paralleling a prolonged survival of patients after organ transplantation represents a significant reason for morbidity and long term morbidity in organ transplant recipients worldwide The incidence of non melanoma skin cancer in liver kidney and heart transplant recipients varies from 1.5 to 22 %

2 to 24 % and 6 to 34 % after 5 years post transplant Ultraviolet radiation as well as immunosuppressive therapy are crucial risk factors regarding the induction and progression of skin cancer Ultraviolet radiation is related to the induction of DNA damage as well as interference with Langerhans cell antigen presentation and a Th1 Th2 shift induced via a release of IL 10 Whereas the overall duration of immunosuppression and the cumulative dosage applied are relevant parameters in the evaluation of an increased tumor risk individual differences between specific immunosuppressive agents remain unclear The workup of genetic as well as other unclear phenomenon like the reverse BCC SCC ratio might shed some further light into the genesis and immunology of the non melanoma skin cancer in general
