**Acute and Emergent Events in Sleep Disorders** Sudhansu Chokroverty, Pradeep Sahota, 2011-01-27 America is a 24/7 lifestyle. This makes sleep especially disruptions in sleep a pressing concern for many Americans. According to the National Sleep Foundation (NSF), approximately 40 million Americans suffer from chronic sleep disorders, and an estimated 20-30 million others experience sleep-related problems. Chronic sleep disorders may also lead to psychiatric disorders such as depression and schizophrenia. Moreover, neurological disorders such as seizures, strokes, Parkinson's etc. and medical disorders such as asthma or arrhythmia also affect the quality of sleep. Americans receive Acute and Emergent Events in Sleep Disorders, which creates awareness for the management of disorders that occur during sleep. Chokroverty and Sahota bring greater awareness to the treatment of sleep disorders as well as treatments of neurological, medical, and psychiatric disorders. The book has six different sections covering a wide range of topics dealing with how to treat and manage these events. For example, when to prescribe CPAP (Continuous Positive Airway Pressure) machines for sleep apnea patients whose risks are doubled for stroke or death as compared to those without the disorder. Another segment discusses treatment of Restless Legs Syndrome (RLS), a movement disorder which is amplified when trying to rest. Managing depression which affects patients' sleep cycles is analyzed as well as its relation to sleep deprivation and insomnia. Considerations for sleep disorders in children such as Sudden Infant Death Syndrome (SIDS) are also presented. This book serves as an effective tool for neurologists, clinical neuroscientists, residents, and fellows.

**The Encyclopedia of Neuropsychological Disorders** Chad A. Noggle, Raymond S. Dean, Arthur MacNeill Horton, 2012 I am pleased to include this text in my library and I am confident that it will serve as an excellent resource for years to come. **PsycCRITIQUES** This book serves as an A-Z reference that addresses the neuropsychological aspects of 300 neurological, neuropsychiatric, and neuromedical disorders. Each entry follows a 5-section structure that will cover: 1. essential features of the disorder, 2. physiological basis of the disorder, 3. neuropsychological and other clinical presentation, 4. assessment and diagnostic practices, 5. evidence-based treatments and interventions. This book is written for clinical professionals and students in training to aid in clinical awareness, diagnostic accuracy, and intervention success. The text goes beyond the emotional and behavioral aspects of each disorder and views the broader impacts of the symptoms. This approach emphasizes the importance of looking at the other functional impacts of these manifestations, e.g. cognitive deficits secondary to depression, orthopaedic ambulation issues. The emphasis on neuropsychological sequelae, physiological basis, and means of diagnosing and treating of 300 conditions across the lifespan make this the most comprehensive resource available to professionals in and around neuropsychology, neuropsychiatry, and the behavioral neurosciences. **Key Features:** Presents 300 highly structured entries providing disorder features, pathology, and physiology; clinical representation; assessment and diagnosis; and evidence-based treatments and interventions. Covers neurological, neuropsychiatric, and neuromedical disorders across the lifespan: pediatric, adult, and geriatric populations. Includes interventions and methods of treatment for the outcomes patients may experience.

Tovian,2013-06-29 For two decades I have been responding to questions about the nature of health psychology and how it differs from medical psychology behavioral medicine and clinical psychology From the beginning I have taken the position that any application of psychological theory or practice to problems and issues of the health system is health psychology I have repeatedly used an analogy to Newell and Simon's General Problem Solver program of the late 1950s and early 1960s which had two major functional parts in addition to the executive component One was the problem solving core the procedural competence the other was the representation of the problem environment In

the analogy the concepts knowledge and techniques of psychology constitute the core competence the health system in all its complexity is the problem environment A health psychologist is one whose basic competence in psychology is augmented by a working knowledge of some aspect of the health system Quite apparently there are functionally distinct aspects of health psychology to the degree that there are meaningful subdivisions in psychological competence and significantly different microenvironments within the health system I hesitate to refer to them as areas of specialization as the man who gave health psychology its formal definition Joseph Matarazzo has said that there are no specialties in psychology cited in the editors preface to this book
