Developing Mathematical Proficiency for Elementary Instruction Yeping Li, Roger E. Howe, W. James Lewis, James J. Madden, 2021-04-23 The need to improve the mathematical proficiency of elementary teachers is well recognized and it has long been of interest to educators and researchers in the U S and many other countries. But the specific proficiencies that elementary teachers need and the process of developing and improving them remain only partially conceptualized and not well validated empirically. To improve this situation national workshops were organized at Texas A M University to generate focused discussions about this important topic with participation of mathematicians mathematics educators and teachers. Developing Mathematical Proficiency for Elementary Instruction is a collection of articles that grew out of those exciting cross disciplinary exchanges. Developing Mathematical Proficiency for Elementary Instruction is organized to probe the specifics of mathematical proficiency that are important to elementary teachers during two separate but inter connected professional stages as pre service teachers in a preparation program and as in service teachers teaching mathematics in elementary classrooms. From this rich and inspiring collection readers may better understand and possibly rethink their own practices and research in empowering elementary teachers mathematically and pedagogically as educators or researchers.

Relearning Mathematics Rina Zazkis, 2011-08-01 This book is grounded in the author's experiences of teaching mathematics for prospective elementary school teachers and

conducting research on their understanding of mathematical concepts It is a reflection on practice and an attempt to cope with a double challenge that of a teacher in helping prospective teachers make sense of mathematics and that of a researcher in an attempt to understand and describe the challenges faced by students This work fits within the current community interest on teacher education and provides a novel focus with both theoretical and practical considerations The central claim in this book is that encounters with mathematical content by prospective elementary school teachers constitute relearning rather than learning of mathematics The specific focus is on topics related to elementary number theory e g divisibility prime factorization which is referred to as a forgotten queen following Gauss reference to number theory as a queen of mathematics This is the content area that has not received significant attention in mathematics education research The book can be summarized as an attempt to address the following questions What is relearning of mathematical content and how is it similar to or different from learning What are the examples of specific mathematical topics or concepts that require relearning What pedagogical approaches can support relearning The detailed analysis of research data and pedagogical approaches presented in the book are intertwined with stories of personal experiences of the author which makes the reading not only intellectually stimulating but also enjoyable
