

Teaching Science Through Art

By Sharon Jeffus

We've found the "missing link!" This would make a great "link" between your science text and understanding science through art. Or is it really a great science book with art skillfully incorporated? It's a unique book, from Visual Manna, with more than a little information on each topic covered. The table of contents reads like a science book, with lesson topics divided into Invertebrates, Vertebrates, Plant Kingdom, Earth and Heavens, and Machines. Art and science are a natural combination, as the foundation of both is careful observation. People like Audubon and Da Vinci made a life's work out of thinning the line between these subjects.

Over 70 exciting lessons from cells to tractors provide useful information, points of observation, and multiple activities, both scientific and artistic. You could use this as a great elementary science book, or to begin or complement unit studies.

Sharon Jeffus has a B.S.S.E. in Art Education and has written over twenty books. She heads the internationally known company Visual Manna that promotes a teaching method where art is integrated with art appreciation, techniques, vocabulary and core subjects.
