Olsen,2009-07-01 Will America find enough good teachers to staff its public schools How can we ensure that all our children will be taught by skilled professionals The policies that determine who teaches today are a confusing and often conflicting array that includes tougher licensing requirements higher salaries mandatory master s degrees merit pay and alternative routes to certification Who Will Teach examines these policies and separates those that work from those that backfire The authors present an intriguing portrait of America s teachers and reveal who they are who they have been and who they will be Using innovative statistical methods to track the professional lives of more than 50 000 college graduates the book describes in many cases for the first time just how prospective current and former teachers respond to the incentives and disincentives they face The authors a group of noted educators economists and statisticians find cause for serious concern

Few academically talented college graduates even try teaching and many of those who do leave quickly never to return Current licensing requirements stifle innovation in training and dissuade many potentially talented teachers at the outset But Who Will Teach shows that we can reverse these trends if we get the incentives right Although better salaries are essential especially for new teachers money is not enough Potential teachers should be offered alternative paths into the classroom School districts should improve their recruiting strategies Licensing criteria should assess teaching skills not just academic achievement and number of courses completed The authors offer a promising strategy based on high standards and substantial rewards

Statistical models attempt to describe and quantify relationships between variables In the models presented in this chapter there is a response variable sometimes called dependent variable and at least one predictor variable sometimes called independent or explanatory variable When investigating a possible cause and effect type of relationship the response variable is the putative effect and the predictors are the hypothesized causes Typically there is a main predictor variable of interest other predictors in the model are called covariates Unknown covariates or other independent variables not controlled in an experiment or analysis can affect the dependent or outcome variable and mislead the conclusions made from the inquiry Bock Velleman given the model  $p$  is the probability that a relationship is seen by mere chance The smaller the  $p$  value the more confident we can be that the pattern seen in the data is not random In the type of models examined here the  $R^2$  measures the proportion of the variation in the response variable that is explained by the predictors specified in the model if  $R^2$  is close to 1 then almost all the variation in the response variable has been explained This measure is also known as the multiple correlation coefficient Statistical studies can be grouped into two types experimental and observational

Navigating World History P. Manning, 2003-05-15 World history has expanded dramatically in recent years, primarily as a teaching field and increasingly as a research field. Growing numbers of teachers and Ph.D.s in history are required to teach the subject. They must be current on topics from human evolution to industrial development in Song dynasty China to today's disease patterns and then link these disparate topics into a coherent course. Numerous textbooks in print and in preparation summarize the field of world history at an introductory level. But good teaching also requires advanced training for teachers and access to a stream of new research from scholars trained as world historians. In this book, Patrick Manning provides the first comprehensive overview of the academic field of world history. He reviews patterns of research and debate and proposes guidelines for study by teachers and by researchers in world history.
