Teaching, Learning and Scaffolding in CLIL Science Classrooms Yuen Yi Lo, Angel M.Y. Lin, 2021-05-15 This edited volume presents a collection of empirical studies examining the teaching and learning processes in science classrooms in Content and Language Integrated Learning (CLIL) contexts. It is a timely contribution to the rapidly growing body of CLIL research in response to scholars' consistent calls for more classroom based research on the issues in integration of content and language teaching in lessons. With the dual goal of content and language learning, students in CLIL programmes are also facing double challenges: mastery of abstract cognitively demanding content knowledge and unfamiliar academic language. Focusing on the notion of scaffolding, this edited volume demonstrates how science teachers can provide appropriate and timely scaffolding for their students to overcome the challenges in CLIL science classrooms. With studies from different educational settings: Hong Kong, Mainland China, Singapore and Australia, and epistemological paradigms and adopting a variety of research designs, this volume will provide key insights into CLIL pedagogy and teacher education. **Aspects of Language and Learning** M.A.K. Halliday, 2016-03-22 This book is based on a series of lectures which begin with a look at the history of the language that we use in order to encode our knowledge, particularly our scientific knowledge, i.e. the history of scientific English. Prof. M. A. K. Halliday poses the question of how a growing child comes to master this kind of language and put it to his or her own use as a means of learning. In subsequent chapters, Halliday explores the relationship between language education and culture, again taking the language of science as the focal point for the discussion, and finally he draws these various themes together to construct a linguistic interpretation of how we learn and how we learn how to learn.
