## **Techniques For Nuclear And Particle Physics Experiments:**

**Techniques for Nuclear and Particle Physics Experiments** William R. Leo, 2012-12-06 Not quite six years have passed since the appearance of the first edition of this book. This is not a long period. Yet the rapid pace of scientific and technological development today is such that any book on experimental technique must be wary of becoming obsolete in some way or another even in such a short span of time. Thus when the publisher Springer Verlag informed me of the need for a new printing of this book I decided it was an opportune moment to update some of the chapters as well as to include some new material. The result is this second edition. The most notable changes have been in Chapters 2 and 3. In the latter which concerns radiation protection most of the sections have been rewritten to take into account the new recommendations from the International Commission on Radiation Protection the most important of which are the new dose limits for exposure to ionizing radiation. In addition emphasis has now been put on the use of SI units in dosimetry i.e. the Gray and Sievert which have now become standard.

Leo, 1994-02-25 A treatment of the experimental techniques and instrumentation most often used in nuclear and particle physics experiments as well as in various other experiments providing useful results and formulae technical know how and informative details. This second edition has been revised while sections on Cherenkov radiation and radiation protection have been updated and extended.

**Experimental Techniques in Nuclear and Particle Physics** Stefaan Tavernier, 2010-02-06 I have been teaching courses on experimental techniques in nuclear and particle physics to master students in physics and in engineering for many years. This book grew out of the lecture notes I made for these students. The physics and engineering students have rather different expectations of what such a course should be like. I hope that I have nevertheless managed to write a book that can satisfy the needs of these different target audiences. The lectures themselves of course need to be adapted to the needs of each group of students. An engineering student will not question a statement like the velocity of the electrons in atoms is 1% of the velocity of light. A physics student will. Regarding units I have written factors  $h$  and  $c$  explicitly in all equations throughout the book. For physics students it would be preferable to use the convention that is common in physics and omit these constants in the equations but that would probably be confusing for the engineering students. Physics students tend to be more interested in theoretical physics courses. However physics is an experimental science and physics students should understand how experiments work and be able to make experiments work. This is an open access book.

**Techniques for Nuclear and Particle Physics Experiments** William R. Leo, 1987 This book is an outgrowth of an advanced laboratory course in experimental nuclear of Geneva and particle physics the author gave to physics majors at the University 1978-1983. The course was offered to third

and fourth year students during the years the latter of which had at this point in their studies chosen to specialize in experimental nuclear or particle physics This implied that they would go on to do a diploma thesis with one of the high or intermediate energy research groups in the physics department The format of the course was such that the students were required to concentrate on only one experiment during the trimester rather than perform a series of experiments as is more typical of a traditional course of this type Their tasks thus included planning the experiment learning the relevant techniques setting up and troubleshooting the measuring apparatus calibration data taking and analysis as well as responsibility for maintaining their equipment i e tasks resembling those in a real experiment This more intensive involvement provided the students with a better understanding of the experimental problems encountered in a professional experiment and helped instill a certain independence and confidence which would prepare them for entry into a research group in the department Teaching assistants were present to help the students during the trimester and a series of weekly lectures was also given on various topics in experimental nuclear and particle physics
