## **Teaching Conversation To Children With Autism Scripts And Script Fading:**

*Teaching Conversation to Children with Autism* Lynn E. McClannahan, Patricia J. Krantz, 2005 Scripting is a teaching method designed to help children and adults with autism spectrum disorders ASDs who are nonverbal or who are verbal but don't initiate conversation to initiate conversation. The authors draw on years of experience using scripts in their own clinic and include many case studies that show how scripts have worked. The book defines scripts as an audiotape or written word phrase or sentence that enables young people with autism to use speech to start and continue conversations. At first a child is taught to play the recording of a word for an adult and then get a reaction from the adult e.g. if he plays the script juice the adult will give him a sip of juice or if he plays the script ball the adult will play ball with him. Later on the child is taught to play the script and then say the word himself and get the reward from the adult. As the child becomes better at talking scripts are lengthened to become phrases want juice or play ball and then sentences. And once the child can read scripts are written instead of recorded. As the child masters sets of scripts the adult begins to diminish fade the prompts. If the script was recorded words are gradually deleted from the recording e.g. if the script started out saying Where is mom they will re-record it so it just says Where is and then Where. At this point the child should fill in the blanks.

*Evidence-Based Practices and Treatments for Children with Autism* Brian Reichow, Peter Doehring, Domenic V. Cicchetti, Fred R. Volkmar, 2010-11-25

Autism spectrum disorders (ASDs) have been increasingly diagnosed in recent years and carries with it far reaching social and financial implications. With this in mind, educators, physicians, and parents are searching for the best practices and most effective treatments. But because the symptoms of ASDs span multiple domains (e.g., communication and language, social, behavioral), successfully meeting the needs of a child with autism can be quite challenging.

*Evidence Based Practices and Treatments for Children with Autism* offers an insightful and balanced perspective on topics ranging from the historical underpinnings of autism treatment to the use of psychopharmacology and the implementation of evidence-based practices (EBPs). An evaluation methodology is also offered to reduce the risks and inconsistencies associated with the varying definitions of key autism terminology. This commitment to clearly addressing the complex issues associated with ASDs continues throughout the volume and provides opportunities for further research.

Additional issues addressed include: Behavioral excesses and deficits treatment, Communication treatment, Social awareness and social skills treatment, Dietary, complementary and alternative treatments, Implementation of EBPs in school settings, Interventions for sensory dysfunction.

With its holistic and accessible approach, *Evidence Based Practices and Treatments for Children with Autism* is a vital resource for school psychologists and special education professionals, as well as allied mental health professionals including clinical child and developmental psychologists, psychiatrist, pediatricians, primary care, and community providers.

*A Practical Guide to Autism* Fred R. Volkmar, Lisa A. Wiesner, 2009-05-18

Autism is in the public spotlight now more than ever as new research and information appears almost daily. Although in many ways this is a positive development, it also presents challenges to families and practitioners who want to keep up with the latest developments and are left to sift through new information by themselves to see what is credible and relevant for them. Each of us needs a personal research assistant who can determine which information we need to pay attention to and let us know how it might affect our daily work and the children we are living with or serve.

Since we each don't have our own research assistants on staff, I am delighted to recommend this wonderful book by Fred Volkmar and Lisa Wiesner. Both of these talented professional leaders have combined their scientific skills and understanding of the field with great practical experience and ideas about how research can be translated into clinical practice. The result is a book that provides the best and most comprehensive information about recent scientific developments and a splendid practical guide for how they are being implemented and what we are learning in the process.

The issues are presented in all of their complexity but translated into language that is clear, direct, and easy to follow. The format also lends itself to understanding the complex issues and their implications through excellent charts, question and answer sections, and chapters that vary from describing diagnostic issues to stating very specifically how to expand and evaluate the services one is receiving. The comprehensive references

and lists of additional resources also add greatly to the overall package As a professional dedicated to understanding scientific advances and helping families and teachers to utilize them most effectively I am very pleased to have an ally like this book available I am very grateful to the authors for providing a very credible practical and relevant addition to our field to help the many advocates and family practitioners to better understand the exciting new developments and how they can be implemented in our day to day work Those taking the time to read through this superb volume will find it time well spent that pays back dividends in many different ways
