Teaching Statistics In The Computer Age:

Teaching of statistics in the computer age Lennart Rade,1985

Topics from Australian Conferences on

Teaching Statistics Helen MacGillivray,Brian Phillips,Michael A. Martin,2014-09-01 The first OZCOTS conference in 1998 was inspired by papers contributed by Australians to the 5th International Conference on Teaching Statistics In 2008 as part of the program of one of the first National Senior Teaching Fellowships the 6th OZCOTS was held in conjunction with the Australian Statistical Conference with Fellowship keynotes and contributed papers optional refereeing and proceedings This venture was so successful that the 7th and 8th OZCOTS were similarly run conjoined with Australian Statistical Conferences in 2010 and 2012 Authors of papers from these OZCOTS conferences were invited to develop chapters for refereeing and inclusion in this volume There are sections on keynote topics undergraduate curriculum and learning professional development postgraduate learning and papers from OZCOTS 2012 Because OZCOTS aim to unite statisticians and statistics educators the approaches this volume takes are immediately relevant to all who have a vested interest in good teaching practices Globally statistics as a discipline statistical pedagogy and statistics in academia and industry are all critically important to the modern information society This volume addresses these roles within the wider society as well as questions that are specific to the discipline itself Other chapters share research on learning and teaching statistics in interdisciplinary work and student preparation for futures in academia government and industry *General Statistics* Victor

Aladjev,Vjacheslav Vaganov,2014-10-17 The book is a statistic course for undergraduate students in all fields of social and economic sciences The book presents a manual on a course General Statistics including a series of not quite traditional topics Above all it concerns the mathematical bases of statistics and use of computer technologies in statistic probing At that thematic choice of the chapters and sections of the book is caused not only by interests and tastes of the authors but also by modern tendencies in applied statistics and orientation of the given work The book contains a series of concrete proposals for improvement of statistic practice many of them are based on our experience in practical statistical activity in statistical organs of USSR and Estonia A comparability aspect of the Soviet statistic school inheriting many traditions of the worldwide known Russian school of probability theory and statistics with western statistics can be a rather interesting to the English speaking reader *Selected Works of Terry Speed* Sandrine Dudoit,2012-04-11 The purpose of this volume is to provide an

overview of Terry Speed s contributions to statistics and beyond Each of the fifteen chapters concerns a particular area of research and consists of a commentary by a subject matter expert and selection of representative papers The chapters organized more or less chronologically in terms of Terry s career encompass a wide variety of mathematical and statistical domains along with their application to biology and medicine Accordingly earlier chapters tend to be more theoretical covering some algebra and probability theory while later chapters concern more recent work in genetics and genomics The chapters also span continents and generations as they present research done over four decades while crisscrossing the globe

The commentaries provide insight into Terry's contributions to a particular area of research by summarizing his work and describing its historical and scientific context, motivation and impact. In addition to shedding light on Terry's scientific achievements, the commentaries reveal endearing aspects of his personality such as his intellectual curiosity, energy, humor and generosity.

Chance Encounters: Probability in Education R. Kapadia, M. Borovcnik, 2012-12-06 This book has been written to fill a substantial gap in the current literature in mathematical education. Throughout the world, school mathematical curricula have incorporated probability and statistics as new topics. There have been many research papers written on specific aspects of teaching, presenting novel and unusual approaches to introducing ideas in the classroom; however, there has been no book giving an overview. Here we have decided to focus on probability, making reference to inferential statistics where appropriate; we have deliberately avoided descriptive statistics as it is a separate area and would have made ideas less coherent and the book excessively long. A general lead has been taken from the first book in this series, written by the man who probably more than anyone else has established mathematical education as an academic discipline. However, in his exposition of didactical phenomenology, Freudenthal does not analyze probability. Thus in this book we show how probability is able to organize the world of chance and idealized chance phenomena based on its development and applications. In preparing these chapters, we and our co-authors have reflected on our own acquisition of probabilistic ideas, analyzed textbooks and observed and reflected upon the learning processes involved when children and adults struggle to acquire the relevant concepts.
