Fraser, Lauren Lefty, 2018-10-01 Teacher education in America has changed dramatically in the past thirty years with major implications for how our kids are taught As recently as 1990 if a person wanted to become a public school teacher in the United States he or she needed to attend an accredited university education program Less than three decades later the variety of routes into teaching is staggering In Teaching Teachers education historians James W Fraser and Lauren Lefty look at these alternative programs through the lens of the past Fraser and Lefty explain how beginning in 1986 an extraordinary range of new teaching programs emerged most of which moved teacher education out of universities In some school districts and charter schools superintendents started their own teacher preparation programs sometimes in conjunction with universities sometimes not Other teacher educators designed blended programs creating collaboration between university teacher education programs and other parts of the university linking with school districts and independent providers and creating a range of novel options Fraser and Lefty argue that three factors help explain this dramatic shift in how teachers are trained an ethos that market forces were the solution to social problems long term dissatisfaction with the inadequacies of university based teacher education and the frustration of school superintendents with teachers themselves who can seem both underprepared and too quick to challenge established policy Surveying which programs are effective and which are not this book also examines the impact of for profit teacher training in the classroom Casting light on the historical and social forces that led to the sea change in the ways American teachers are prepared Teaching Teachers is a substantial and unbiased history of a controversial topic *Market Movements* Thomas C. Ball, 2003-08-29 Examines the ways in which the middle classes maintain and improve their social advantages in and through education The Evolution of Teaching Rich Waters, 2014-10-08 The Evolution of Teaching invites teachers to rethink what teachers and schools do The need to rethink the role of teachers is driven by an abundance of data showing that teachers are increasingly unhappy with their work Most critically they feel a loss of control over their work and their profession as they witness teacher voices being marginalized by impersonal authorities outside of schools who dictate more and more of what teachers and schools must do The antidote to this condition is the evolution of teaching Teachers need to take charge and lead change They need to redefine teaching and schooling in such a way that it authentically supports student learning and teacher learning They must redefine it in a way that supports every teacher's desire to have a personal impact on students while having control over their own work stakeholder standing as respected professionals and a full career of professional growth As *A Guidebook to the Advancement of Teaching Teacher Education and Happier Careers* this text will assist teachers in reconceiving the profession of teaching in ways that will make it more personally satisfying while acknowledging that the work of teachers in the twenty first century must necessarily be different from what we have now legacy practices of standardization left over from the industrial age *Mapping Corporate Education Reform* Wayne Au, Joseph J. Ferrare, 2015-04-10 Mapping Corporate Education Reform outlines and analyzes the complex relationships between policy actors that define education reform within the current neoliberal context Using social network analysis and powerful data visualization tools the authors identify the problematic roots of these relationships and describe their effects both in the U S and abroad Through a series of case studies each chapter reveals how powerful actors from billionaire philanthropists to multinational education corporations leverage their resources to implement free market mechanisms within public education By comprehensively connecting the dots of neoliberal education reforms the authors reveal not only the details of the reforms themselves but the relationships that enable actors to amass troubling degrees of political power through network governance A critical analysis of the actors and interests behind education policies Mapping

Changing Politics of Education Michael Fabricant, Michelle Fine, 2015-11-17 The authors persuasively argue that the

present cascade of reforms to public education is a consequence of a larger intention to shrink government. The startling result is that more of public education's assets and resources are moving to the private sector and to the prison industrial complex. Drawing on various forms of evidence, structural economic narrative, and youth-generated participatory research, the authors reveal new structures and circuits of dispossession and privilege that amount to a clear failure of present policy. Policymaking is at war with the interests of the vast majority of citizens and especially with urban youth of color. In the final chapter, the authors explore democratic principles and offer examples essential to mobilizing in solidarity with educators, youth communities, labor, and allied social movements the kind of power necessary to contest the present direction of public education reform.

Resource Management for Colleges and Universities William F. Massy, 2020-06-09 How comprehensive activity-based models can help university leaders and faculty reshape their institutions through better resource management. Resources in higher education steer colleges and universities both strategically and tactically. They drive incentives and accountability for faculty and staff while providing academics with the infrastructure they need in order to perform effectively. But while American colleges and universities remain the gold standard for worldwide higher education, *Resource Management for Colleges and Universities* argues that their decision-making cultures and business models are beset by serious flaws. In this audacious book, William F. Massy writes that resource allocation in colleges and universities needs to become more responsive to academic mission, marketplace realities, and the requirements of financial sustainability. Such improvement is needed, he asserts, because few institutions currently have the evidence, know-how, and cultural capacity to take advantage of modern information systems and models. Luckily, today's academic resourcing models enable academic leaders and faculty to close the gaps and do a significantly better job of controlling costs and improving academic performance. Massy describes three kinds of contemporary comprehensive AR models: internal economic, external economic, and mission market margin. He explains how these models, if used correctly, support mission-critical academic decisions and reveals why they are game-changers for college and university management. Describing how real universities are using these models to understand their teaching and research revenues and costs and to predict changes needed in budget planning, Massy also provides numerous insights about how academic organizations function and how they can be induced to adopt needed changes. Building on *Reengineering the University*, Massy's earlier book, *Resource Management for Colleges and Universities* will provide readers with the wherewithal and the motivation to fundamentally transform their institutions.
