What can simple brains teach us about how vision works Davide Zoccolan, David D. Cox, Andrea Benucci, R. Clay Reid, 2015-11-18 Vision is the process of extracting behaviorally relevant information from patterns of light that fall on retina as the eyes sample the outside world Traditionally nonhuman primates macaque monkeys in particular have been viewed by many as the animal model of choice for investigating the neuronal substrates of visual processing not only because their visual systems closely mirror our own but also because it is often assumed that simpler brains lack advanced visual processing machinery However this narrow view of visual neuroscience ignores the fact that vision is widely distributed throughout the animal kingdom enabling a wide repertoire of complex behaviors in species from insects to birds fish and mammals Recent years have seen a resurgence of interest in alternative animal models for vision research especially rodents This resurgence is partly due to the availability of increasingly powerful experimental approaches e g optogenetics and two photon imaging that are challenging to apply to their full potential in primates Meanwhile even more phylogenetically distant species such as birds fish and insects have long been workhorse animal models for gaining insight into the core computations underlying visual processing In many cases these animal

models are valuable precisely because their visual systems are simpler than the primate visual system. Simpler systems are often easier to understand and studying a diversity of neuronal systems that achieve similar functions can focus attention on those computational principles that are universal and essential. This Research Topic provides a survey of the state of the art in the use of animal models of visual functions that are alternative to macaques. It includes original research methods articles, reviews, and opinions that exploit a variety of animal models including rodents, birds, fishes, and insects, as well as small New World monkey, the marmoset, to investigate visual function. The experimental approaches covered by these studies range from psychophysics and electrophysiology to histology and genetics, testifying to the richness and depth of visual neuroscience in non-macaque species.

Teach Us to Pray Owupele Bamson, Mabel Bamson, 2009-07-27. Teach Us To Pray. Prayer creates a sweet smelling fragrance around God's throne. Every church and every Christian must practice the act of prayer in order to create that fragrance before the throne of God. We pray to instigate war in the heavenlies; we command the fight in the spirit realm. We bring the forces of heaven; the angels to collide with the forces of darkness; satanic princes over nations that resist the angels from delivering God's answers to prayer. The prophet Daniel committed himself to fasting and prayer for twenty-one days. The angel bringing Daniel's answer could not deliver the message because the prince of Persia, a satanic principality, hindered him. The angel had to call for backup from heaven. God sent Archangel Michael to take up the fight. The first angel slipped through the fight and conveyed the message to Daniel. Your prayers can do the same. Owupele and Mabel Bamson. The Bamsons have a combined salvation experience of over 40 years and charismatic experience of the power of the Holy Spirit for over 28 years. They were trained under one of the leading men of faith in Africa, the Presiding Bishop of Living Faith Church Worldwide, Bishop David O. Oyedepo. They are graduates of Word of Faith Bible Institute under the same ministry in the Abuja Campus. The Bamsons were commissioned and ordained in 1996 and 1998 and are sent by God to the United States to raise Intercessors, train them by seminars, and mentor them into dynamic prayer warriors. The Bamsons have ministered to immigrants from Jamaica in Nashville and currently planting a church in Nashville. Chapel of Peace Inc., a non-denominational charismatic church, also known as The House of Prayer. They have seen God move in the miraculous.
