Agent Based Models for Economic Policy Advice Blake LeBaron, Peter Winker, 2016-11-21. This special issue of the Journal of Economics and Statistics is devoted to the use of agent based models for economic policy advice. It presents a collection of research papers in different fields of applications. Special emphasis is laid on discussing the potential and possible limitations of agent based models for economic policy advice. The editorial provides an overview on the role of agent based modeling in economic policy, referring also to the papers presented. Furthermore, it highlights the strength of the approach, i.e. the explicit microfoundation and the modeling of heterogeneous agents. Finally, we also report on current limitations of the method with regard to economic policy advice and point at some areas deserving further research.

Select Topics of Econophysics Amit Sinha,2024-11-04 Economics requires understanding and analyzing forces that bring buyers and sellers to a market place who then negotiate exchanges of goods and services based on a mutually agreeable price Economists have their own method of modeling whereby models are first conceived of some notion of economic and financial thinking before being empirically tested and anomalies are then recognized if the observed data is inconsistent with the hypothetical underpinning This is in inherent contradiction with the modeling approaches of physicists who develop their theories principle and laws after observing empirical data The awareness that physics can enlighten the understanding of human behavior and thus economics and the interest of physicists in applying their training and models to

understanding the complexities of finance and economics led to the creation of a new field of study appropriately termed as Econophysics. Selected Topics on Econophysics is a collection of essays on topics that enhance and enrich our understanding of economic modeling when the same rigor of modelling used by physicists is brought to developing financial and economic theories. These articles include discussions on modeling bitcoins, stock index modeling using geometric Brownian motion, agent based modeling, wealth distribution modeling as well as modeling related to fractal regression and chaotic processes. This interdisciplinary book will interest researchers, graduate students and professionals in the fields of economics, finance as well as physics.
