Introduction to Modeling and Simulation with MATLAB® and Python Steven I. Gordon, Brian Guilfoos, 2017-07-12 Introduction to Modeling and Simulation with MATLAB and Python is intended for students and professionals in science social science and engineering that wish to learn the principles of computer modeling as well as basic programming skills The book content focuses on meeting a set of basic modeling and simulation competencies that were developed as part of several National Science Foundation grants Even though computer science students are much more expert programmers they are not often given the opportunity to see how those skills are being applied to solve complex science and engineering problems and may also not be aware of the libraries used by scientists to create those models The book interleaves chapters on modeling concepts and related exercises with programming concepts and exercises The authors start with an introduction to modeling and its importance to current practices in the sciences and engineering They introduce each of the programming environments and the syntax used to represent variables and compute mathematical equations and

functions As students gain more programming expertise the authors return to modeling concepts providing starting code for a variety of exercises where students add additional code to solve the problem and provide an analysis of the outcomes In this way the book builds both modeling and programming expertise with a just in time approach so that by the end of the book students can take on relatively simple modeling example on their own Each chapter is supplemented with references to additional reading tutorials and exercises that guide students to additional help and allows them to practice both their programming and analytical modeling skills In addition each of the programming related chapters is divided into two parts one for MATLAB and one for Python In these chapters the authors also refer to additional online tutorials that students can use if they are having difficulty with any of the topics The book culminates with a set of final project exercise suggestions that incorporate both the modeling and programming skills provided in the rest of the volume Those projects could be undertaken by individuals or small groups of students The companion website at <http://www.intromodeling.com> provides updates to instructions when there are substantial changes in software versions as well as electronic copies of exercises and the related code The website also offers a space where people can suggest additional projects they are willing to share as well as comments on the existing projects and exercises throughout the book Solutions and lecture notes will also be available for qualifying instructors

Computer Literacy in Human Services Education Richard Reinoehl, B. Jeanne Mueller, 1990 This volume provides a unique and notable contribution to the investigation and exemplification of computer literacy in human services education A significant contribution to the development of the contemporary human services curriculum this helpful guide introduces the computer literate curriculum explores the nature of computer literacy and its ramifications for teaching in the human services and discusses the computer's effect on scholarly thinking Computer Literacy in Human Services Education is divided into two major sections the first dealing with teaching about computers and the second addressing the use of computers in teaching In the first section the authors introduce the topic of computer literacy in human services education and look at some general issues which have broad implications for the educator They also explore program wide curriculum development and the development of individual courses In the second section the authors discuss computers as devices which can facilitate both learning and thinking in human services and suggest that some theories explaining human behavior may also apply to human computer interaction Other topics covered in the section are the use of computers in teaching about human services including Computer Assisted Instruction CAI simulations and interactive video The volume concludes with an examination of the ways computers can affect the thinking of scholars in teaching and in model and theory building in the human services

Mobile Learning and STEM Helen Crompton, John Traxler, 2015-12-07 In recent years there has been a renewed focus on STEM education in the United States fueled by evidence that young learners' competencies in science technology engineering and mathematics are falling behind those of their global peers Scholars and practitioners are beginning to utilize the new pedagogical opportunities offered by mobile

learning to improve the successes of teachers and K 12 students across STEM subjects Mobile Learning and STEM Case Studies in Practice is a comprehensive collection of case studies that explore mobile learning s support of STEM subjects and that utilize mobile technology to facilitate unique and effective K 12 teaching and learning experiences In addition to its focus on STEM achievement for researchers this volume is a resource for teachers working to implement mobile learning initiatives into their classrooms Mobile Learning and STEM also includes research that is applicable to classrooms in nations around the world where few students from underrepresented racial and socioeconomic backgrounds are entering into STEM jobs Concluding with a summary of its research and its implications to future scholarship and practice this book is a springboard for practitioners specialists higher education instructors and researchers who want to establish better practices in schools and raise student achievement in STEM subjects
