Lerner, 2014-01-14 A result of a conference at the University of Trier Germany this volume mirrors its goals to provide an overview of recent advances in research on critical life events and the losses associated with them to collect and stimulate new perspectives for the analysis of these events to compare the psychology of victims experiencing stress and losses with the psychology of observers in their reactions to victims Designed to prevent developmental psychological myths in the area of life crises this collection questions on an empirical basis the adequacy of several widespread generalizations At the same time its contributors attempt to draw paths to conceptualizations and theories in general psychology and social psychology which promise to be helpful in analyzing and interpreting phenomena in the field of life crises Life Events and Illness George William Brown, Tirril O. Harris, 1989-01-01 The role of factors outside the province of the physical and biological sciences in the onset of illness has long been a source of speculation While early efforts in psychosomatic medicine focused on the relationship between mental states and illness the effects of personal status and social circumstances on physical health are only now receiving the attention they merit By integrating current theory methodology and research this ground breaking volume advances the study of life events and disease to a new stage George Brown and Tirril Harris are ideal editors for such an undertaking George Brown has long been known for his path breaking work on intensive clinical assessment and designing measures that capture the real complexity of social situations assigned meanings and personal response to crisis He brought to light the importance of expressed emotion the differential role of life events in schizophrenia and depression and most recently

produced a seminal work on the social etiology of depression with Tirril Harris As David Mechanic notes in his Foreword the defining characteristics of these efforts which are also reflected in this volume are a sensitivity to clinical material and capitalizing on serendipity self consciousness about methods and methodological advances and focus on theory with careful efforts to specify intervening processes and the links between macro events and personal meanings Along with their collaborators these eminent editors bring together an impressive range of theoretical thought and empirical study organized around the Life Events and Difficulties Schedule LEDS Their examination of the origins of life events and difficulties and the notion of conveyor belts to continuing adversity capture the immutable uncertainties of life and help to link concerns with life events and disease to larger issues of human development The authors innovative approach to establishing the relationship between attitudes and psychiatric and physical disorders fully utilizes the wealth of data elicited by the LEDS and demonstrates how the comprehensiveness of this data matches the sophistication and complexity of the theoretical ideas it serves Addressing fundamental questions on the whether the specific nature of life events and vulnerability factors differ in different disorders the authors conclude by providing a perspective on psychodynamic etiology which emphasizes the specificity of crucial links It integrates social psychological and biological factors around the notion that specific types of cognitive affective experience are linked to specific types of illness While significantly advancing our understanding of how individuals define and deal with adversity LIFE EVENTS AND ILLNESS also fosters a greater appreciation of the methodological tools available for examining these processes For all clinicians researchers and students in the behavioral sciences this timely work not only provides a comprehensive review of the literature and a critical examination of current research models but also points the way for future investigations

The Social Context of Coping John

Eckenrode, 2013-12-11 I am very pleased to have been asked to do a brief foreword to this second CRISP volume The Social Context of Coping I know most of the participants and their work and respect them as first rate and influential research scholars whose research is at the cusp of current concerns in the field of stress and coping Psychological stress is central to human adaptation It is difficult to visualize the study of adaptation health illness personal soundness and psychopathology without recognizing their dependence on how well people cope with the stresses of living Since the editor John Eckenrode has portrayed the themes of each of the chapters in his introduction I can limit myself to a few general comments about stress and coping Stress research began as unexplored fields often do with very simple should I say simplistic ideas about how to define the concept Early approaches were unidimensional and input output in outlook modeled implicitly on Hooke's late 17th century engineering analysis in which external load was an environmental stressor stress was the area over which the load acted and strain was the deformation of the structure such as a bridge or building

The Challenge of Cognitive Therapy T. Michael Vallis, Janice L. Howes, Philip C. Miller, 2013-11-21. Cognitive therapy is fast becoming one of the more popular and well respected forms of psychotherapy. In both research and clinical practice several advantages of cognitive therapy have been identified. Cognitive therapy is structured enough to provide a therapeutic framework for clinicians as well as a theoretical framework for clinical researchers yet flexible enough to address an individual's problems in a highly idiosyncratic manner. Accompanying the popularity of cognitive therapy is the expansion of its application beyond the areas in which it was initially developed and validated the traditional areas of depression and anxiety to areas where validation has not yet occurred the nontraditional areas. We strongly believe that such broadening of cognitive therapy should be encouraged but that conceptual models to guide the therapist and researcher in these areas should be explicated. It is the purpose of this text to provide a conceptual framework for dealing with select nontraditional populations. The idea and motivation for this text develops from a cognitive therapy interest group in Toronto. All of the authors contributing to this text are involved in this group. We represent a group of cognitive therapists functioning in a variety of diverse settings including clinical research units general hospital settings private or public rehabilitation centers and private practices. Thus the diversity of referrals for cognitive therapy within our group is great.

A panel of top experts in perinatal psychiatry reviews the many recent studies on the use of psychiatric medications in pregnancy and postpartum and assesses their impact on the diagnosis and treatment of pregnant postpartum women. Interpreting conflicting and inconclusive clinical findings they spell out the lesser known risks of prenatal medication exposure and illuminate a variety of issues that must be taken into account in choosing such treatments as medications psychotherapy parental education and social skills training.

Social Support Alan Vaux, 1988-09-26. Within the last decade social support has become an increasingly popular research topic among professionals in the social sciences. Many empirical studies on social support appeared initially only to be followed by a spate of theoretical articles attempting to make sense of the growing research literature.
