Abstract

Purpose: Transgender and nonbinary (TNB) youth face elevated levels of discrimination, stigma, mental health disorders, and suicidality when compared with their cisgender counterparts. Family and school support may mitigate some of the effects of the stressors facing TNB youth. This study aimed to better understand the impact of each of these sources of support on TNB youths' mental health and wellbeing.

Methods: We used data collected between 2018 and 2019 as part of the Canadian Trans Youth Health Survey, a bilingual online survey to measure social support, physical health, and mental health in a sample of 220 TNB youth aged 14–25 living in Québec, Canada. We examined the relationships among different sources of support, and mental health and wellbeing outcomes using logistic regression. Analyses were conducted on the full sample and according to linguistic groups (French and English).

Results: Participants reported high levels of mental health symptoms, self-harm, and suicidality, and mental health symptoms were higher in the English-speaking group ($p=0.005$). In models controlling for age, family connectedness was associated with good/excellent self-reported mental health (odds ratio [OR]=2.62, $p=0.001$) and lower odds of having considered suicide (OR=0.49, $p=0.003$) or attempted suicide (OR=0.43, $p=0.002$), whereas school connectedness was associated with higher odds of good/very good/excellent general (OR=2.42, $p=0.013$) and good/excellent mental (OR=2.45, $p=0.045$) health.

Conclusion: Family and school support present consistent associations with TNB youths' health and may constitute key areas for intervention for those supporting them.

Introduction

THE LITERATURE ON THE HEALTH and wellbeing of transgender and nonbinary (TNB) youth (i.e., youth whose gender does not align with their sex assigned at birth) is growing fast and it is already well-established that this group faces increased levels of stigma, discrimination, and

barriers in access to health services compared with cisgender youth.^{1–3} It has been suggested that this may at least in part be a reflection of cultural norms around gender, transphobia, and cisnormativity (the assumption of and construction of society around cisgender identities).^{4,5}

These realities are reflected in TNB youth experiencing poorer mental health outcomes such as high rates of suicidal

Social Support Physical Health Unders:

Social Support and Physical Health Bert N. Uchino, 2004-01-01 This book will change the way we understand the future of our planet. It is both alarming and hopeful. James Gustave Speth, renowned as a visionary environmentalist leader, warns that in spite of all the international negotiations and agreements of the past two decades, efforts to protect Earth's environment are not succeeding. Still, he says the challenges are not insurmountable. He offers comprehensive, viable new strategies for dealing with environmental threats around the world. The author explains why current approaches to critical global environmental problems—climate change, biodiversity loss, deterioration of marine environments, deforestation, water shortages, and others—don't work. He offers intriguing insights into why we have been able to address domestic environmental threats with some success while largely failing at the international level. Setting forth eight specific steps to a sustainable future, Speth convincingly argues that dramatically different government and citizen action are now urgent. If ever a book could be described as essential, this is it.

Coping and Emotion in Sport Joanne Thatcher, Marc Jones, David Lavalley, 2011-08-09 The emotional highs and lows of competitive sport, whether experienced as a competitor, spectator, or coach, may be the essential ingredient that gives sport its universal and compelling appeal. Emotion is clearly a pervasive force within competitive sport, and this is reflected in the burgeoning interest over recent decades in athletes' emotions and strategies for coping with these emotions. The interplay between emotion and coping is a critical factor in determining, through its influence on key psychological functions, an athlete's potential success in competitive sport. This fully revised and updated edition of the classic text on coping and emotion in sport goes further than any other book in examining the central role that these two factors play in sports performance. The book explores theory and measurement, current research, and contemporary issues, and special populations, respectively. Each chapter closely integrates cutting-edge research themes with discussion of practical and applied issues, with case studies and reflections from practitioners working in elite sport woven throughout the book. With contributions from leading international scholars and consultant psychologists, this book is vital reading for all students and professionals working in sport psychology.
