Clinical understanding of grief is undergoing a revolution From its Freudian roots it is shifting more and more to a social psychological perspective The phase task orientation of grief has come under serious scrutiny and this book demonstrates some of the problems inherent in that conceptualization in its application to the chronically ill The author attempts to combine the current state of knowledge through an examination of contemporary literature and clinical application He presents a series of comprehensive case studies which together indicate that the key challenge for many patients is loss of self esteem and control The chapters deal with a range of losses such as job loss declining ability to function loss of family and sexual roles old age and its related losses and suicide Through discussion of the trials and tribulations and successes that chronically ill patients encounter in their journey this work will assist clinicians in helping patients come to terms with their new reality and establish a renewed sense of self
