Social Science Information And Public Policy Makin:

Social Science Information and Public Policy Making , Robert Rich reports the results of the Continuous National Survey CNS an administrative experiment with a two year lifespan designed to facilitate the use of research data by public officials in federal agencies

Social Science Information and Public Policy Making Robert F. Rich, 2018-04-24 A survey of federal officials reveals the belief that government should make the fullest possible use of social science information and yet most of the information developed by social scientists winds up in specialized libraries or data banks where it remains unused Why don t public officials make greater use of the information social scientists develop What can social scientists do to ensure that their findings are used To answer these and related questions Robert Rich reports the results of a unique experiment designed to facilitate the use of research data by public officials in federal agencies Rich interviewed both researchers and users of research data over the two year life of a Continous National Survey CNS experiment to discover the extent to which the CNS mechanism was successful and to record the levels and types of use that officials made of the data provided Rich reveals that factors such as the timeliness cost and relevance of data do not guarantee that information will be used He examines patterns in the actual use of survey data by agency officials and explores key organizational factors such as the compatibility of information with various bureaucratic interests He discusses the preoccupation of public officials with bureaucratic issues regarding the ownership and control of information identifies the incentives that prompt bureaucrats to pass along new information and the government officials difficulties in developing policies and programs for meeting national needs Rich notes that studies of knowledge inquiry systems found in the research literature of many social science disciplines have been dominated by a rationalistic bias This bias is expressed in terms of the belief that the act of acquiring information will automatically lead to its use in turn automatically leading to improved policy or decisions He contends that empirical studies of how information is actually used do not support the assumptions of rational choice theory The new chapter also discusses types of information knowledge and use prospects for the development of learning organizations in government and the politics of expertise This book will be of interest to social scientists and public policy makers Robert F Rich is professor of law and political science at the University of Illinois at Urbana Champaign He is also professor in the Institute of Government and Public Affairs and was the director of that Institute from 1986 1997 He is the founding editor of Knowledge Creation Diffusion Utilization now Science Communication

Social Sciences and Modern States Peter Wagner,1991-03-28 Modern social sciences have over the past forty years been committed to the improvement of public policy More recently however doubts have arisen about the possibility and desirability of a policy oriented social science In this book leading specialists in the field analyze both the development and failings of policy oriented social science In contrast to other writings on the subject this volume presents a distinctively historical and comparative approach By looking at earlier periods the contributors demonstrate how policy orientation has been central to the emergence and evolution of the social sciences as a form of professional activity Case studies of rarely examined societies such as Poland Brazil and Japan further demonstrate the various ways in which intellectual developments have been shaped by the societal contexts in which they have emerged and how they have taken part in the shaping of these societies Handbook on Communicating and Disseminating Behavioral Science Melissa K. Welch-Ross,Lauren G.

Fasig,2007-10-03 The Handbook on Communicating and Disseminating Behavioral Science assembles for the first time in a single volume research scholarship and practices from across relevant disciplines and professions to give a coherent picture for both students in the classroom and scholars Designed as both a text and a handbook it provides insights into the main actors contemporary themes and approaches key challenges and the broader conditions that influence whether and how the work occurs Contributors include behavioral scientists journalism and communication scholars mass media reporters editors and producers from print television and radio representatives of think tanks and advocacy organizations and professional communicators from a university a scientific society and a national social issue campaign All bring an accomplished record of sharing behavioral science to inform policy mass media service professions and the public Though scholarly the book brings together leading authorities who are both doers and thinkers to offer insights into how the work is done and to illuminate the underlying conceptual and empirical issues The book also advances the dissemination and communication of behavioral research as an area of scientific inquiry in its own right one that holds vast opportunities for the field of behavioral science Contributors offer recommendations for programs of research that should be at the top of the research agenda As a book of core readings written to be accessible to both professionals and students the book is poised to be a staple of any serious attempt to introduce behavioral scientists to key issues in communicating and disseminating behavioral science and to advance their capacity to understand and conduct the work It is also an unrivaled resource for student and professional science communicators seeking to learn more about the challenges of communicating behavioral research **Higher**

The Ivory Tower of Babel David Demers, 2011 Mainstream social science has come under fierce criticism in recent decades for failing to have more impact on public policy Critics say the social sciences are incapable of generating knowledge that can solve social problems Others contend that partisan politics and university administrations are the problem Politicians are more concerned about special interests than scientific research and administrators care more about scholarly publications than solving social problems Are the social sciences failing to live up to their promises Have they outlived their usefulness Have they become an Ivory Tower of Babel Like the Babylonians who built the infamous Tower of Babel social scientists for the past two centuries have been building a tower of sorts only this time it's composed of knowledge rather than bricks The primary goal of these scholars anthropologists communication scholars economists political scientists sociologists and social psychologists has been to solve problems of social integration The Babylonian tower was designed in part to unite people to one geographical area Similarly social scientists see their tower of knowledge as a means for solving social problems such as poverty crime drug abuse inequality unemployment abuse of power that alienate people and groups from modern society The Babylonians failed because of divine intervention according to the Bible The social scientists aren't finished building their tower But according to critics the results so far look less like a tower of knowledge for solving social problems than an Ivory Tower of Babel one in which social scientists routinely dispute each other's theories and data and even uncontested or well supported findings rarely influence public policy Disputes over the nature of truth and knowledge are so commonplace in the social sciences that many scholars believe a social science which uses methods from the natural sciences is incapable of generating knowledge that can solve social problems This book examines the history and philosophy of the social sciences and theoretical and empirical research on the impact of social science Suggestions are offered at the end for enhancing the impact of the social sciences A number of scientific articles and books have been written about the impact or lack thereof of the social sciences on public policy but none has been written specifically to appeal to both academics and a broader market composed of the general public and students in both undergraduate and graduate level courses The author takes the reader on a journey inside one of the best kept secrets in higher education that much if not most of the research conducted in the social sciences has very little impact on public policy or on solving social problems Are taxpayers getting their money's worth
