Socio Medical Inquiries:

Socio-medical Inquiries Irving Kenneth Zola, 1983 **Sociomedical Perspectives on Patient Care** Jeffrey Michael Clair, Richard M. Allman, 2014-10-17 Social change has placed new demands on the practice of medicine altering almost every aspect of patient care relationships Just as medicine was encouraged to embrace the biological sciences some 100 years ago recent directives indicate the importance of the social sciences in understanding biomedical practice Humanistic challenges call for changes in curative and technological imperatives In this book social scientists contribute to such challenges by using social evidence to indicate appropriate new goals for health care in a changing environment This book was designed to stimulate and challenge all those concerned with the human interactions that constitute medical practice To encompass a wide range of topics the authors include researchers practicing physicians from the specialties of family general geriatric pediatric and oncological medicine social and behavioral scientists and public health representatives Cutting across disciplinary boundaries they explore the ethical economic and social aspects of patient care These essays draw on past studies of the patient doctor relationship and generate new and important questions They address social behavior in patient care as a way to approach theoretical issues pertinent to the social and medical sciences The authors also use social variables to study patient care and suggest new areas of sociomedical inquiry and new approaches to medical practice education and research Its cross disciplinary approach and jargon free writing make this book an important and accessible tool for physician scholar and student

Body Parts E. Richard Gold, 1996 In *Body Parts* E. Richard Gold examines whether the body and materials derived from it such as human organs and DNA should be thought of as market commodities and subject to property law Analyzing a series of court decisions concerning property rights Gold explores whether the language and assumptions of property law can help society determine who has rights to human biological materials Gold observes that the commercial opportunities unleashed by advances in biotechnology present a challenge to the ways that society has traditionally valued the human body and human health In a balanced discussion of both commercial and individual perspectives Gold asserts the need to understand human biological materials within the context of human values rather than economic interests This perceptive book will be welcomed by scholars and other professionals engaged in questions regarding bioethics applied ethics the philosophy of value and property and intellectual property rights Given the international aspects of both intellectual property law and biotechnology this book will be of interest throughout the world and especially valuable in common law most English speaking countries

Bordering Biomedicine Vera Kalitzkus, Peter Twohig, 2006 Biomedicine is the dominant organizing framework of modern medicine but it is not the only lens through which health illness and disease can be understood This interdisciplinary collection of essays brings together scholars from around the world who seek to probe the boundaries of biomedicine This book is the outcome of the third global conference on Making Sense of Health Illness and Disease held at St Catherine s College Oxford in July 2004 The papers selected for this

volume take a variety of theoretical positions but share an interest in the social study of health illness and disease They consider how biomedicine is a cultural system and is imbued with other meanings and that a full exploration of health illness and disease requires a variety of perspectives including those of social scientists humanists and practicing clinicians This volume will be of interest to students researchers and health care providers who wish to gain insight into the many ways through which we can understand health illness and disease **The Lived Experience of Caring** Ashwin Kumar,2005

Menopause Lynnette Leidy Sievert,2006 Menopause is a biological reality for all women in their forties and fifties Yet the way we think about the cessation of menstruation is influenced by a variety of factors Cultural and technological influences combine with biology to transform this universal phenomenon into an experience that varies considerably between cultures and individuals In this concise book Lynnette Leidy Sievert draws on her own case studies from Puebla Mexico and western Massachusetts as well as on comparative data from other studies in places such as Slovenia Paraguay and Hawaii to explore the different ways that women experience menopause around the world Sievert suggests that attempts by medical professionals to define the normal occurrence of menopause including its typical onset and symptoms may not be realistic when considering how lifestyle nutrition and workload can contribute to diverging realities She explores how women feel about hysterectomies chemotherapy and other medical procedures and treatments that stop menstruation prematurely She also considers recent advances in technology including post menopausal birth which have turned what was previously an unavoidable end of fertility into something that can be postponed A unique comparative look at women s experiences this text brings new perspectives to the mainstream literature on the subject and invites readers to consider compelling questions about menopause its meanings and its future The Company Doctor Elaine Draper,2003-01-30 To limit the skyrocketing

costs of their employees health insurance companies such as Dow Chevron and IBM as well as many large HMOs have increasingly hired physicians to supervise the medical care they provide As Elaine Draper argues in The Company Doctor company doctors are bound by two conflicting ideals serving the medical needs of their patients while protecting the company s bottom line Draper analyzes the advent of the corporate physician both as an independent phenomenon and as an index of contemporary culture reaching startling conclusions about the intersection of corporate culture with professional autonomy Drawing on over 100 interviews with company physicians scientists and government and labor officials as well as historical legal and statistical sources and medical trade association data Draper presents an illuminating overview of the social context and meaning of professional work in corporations Draper finds that while medical journals speeches and ethical codes proclaim the independent professional judgment of corporate physicians the company doctors she interviewed often expressed anguish over the tightrope they must walk between their patients health and the corporate oversight they face at every turn Draper dissects the complex position occupied by company doctors to explore broad themes of doctor patient trust employee loyalty privacy issues and the future direction of medicine She addresses such controversial topics as

drug screening and the difficult position of company doctors when employees sue companies for health hazards in the workplace Company doctors are but one example of professionals who have at times ceded their autonomy to corporate management Physicians provide the prototypical professional case for exploring this phenomenon due to their traditional independence extensive training and high levels of prestige But Draper expands the scope of the book tracing parallel developments in the law science and technology to draw insightful conclusions about changing conditions in the professional workplace as corporate cultures everywhere adapt to the new realities of the global economy The Company Doctor provides a compelling examination of the corporatization of American medicine with far reaching implications for professionals in many other fields

The Old Age Challenge to the Biomedical Model Charles F. Longino,2020-11-25 Central to this book is the idea that the United States is in the midst of a health care crisis one that will be exacerbated as the population continues to age Longino and Murphy trace the philosophical and technological development of the biomedical model and show its inadequacy to deal with the massive chronic disease demand of the present and the future They argue that the delivery of health care will meet and survive the old age challenge only if the medical system is thoroughly democratized A more inclusive system must be devised that encourages a more reasonable allocation of resources gives more attention to prevention adopts a wider range of non medical interventions and invites citizens to become more involved in their own health care and the planning of services

Hot and Bothered Judith A HOUCK,Judith A Houck,2009-06-30 How did menopause change from being a natural and often welcome end to a woman s childbearing years to a deficiency disease in need of medical and pharmacological intervention By examining the history of menopause over the course of the twentieth century Houck shows how the experience and representation of menopause has been profoundly influenced by biomedical developments and by changing roles for women and the changing definition of womanhood
