**Social Learning** Thomas R. Zentall, Bennett G. Galef, 1988      *Social Learning In Animals* Cecilia M. Heyes, Bennett G. Galef Jr., 1996-05-23 The increasing realization among behaviorists and psychologists is that many animals learn by observation as members of social systems Such settings contribute to the formation of culture This book combines the knowledge of two groups of scientists with different backgrounds to establish a working consensus for future research The book is divided into two major sections with contributions by a well known international and interdisciplinary team which integrates these growing areas of inquiry Integrates the broad range of scientific approaches being used in the studies of social learning and imitation and society and culture Provides an introduction to this field of study as well as a starting point for the more experienced researcher Chapters are succinct reviews of innovative discoveries and progress made during the past decade Includes statements of varied theoretical perspectives on controversial topics Authoritative contributions by an international team of leading researchers      *Mammalian Social Learning* Hilary O. Box, Kathleen R. Gibson, 1999-10-07 Social learning commonly refers to the social transfer of information and skill among individuals It encompasses a wide range of behaviours that include where and how to obtain food how to interact with members of one's own social group and to identify and respond appropriately to predators The behaviour of experienced individuals provides natural sources of information by which inexperienced individuals may learn about the opportunities and hazards of their environment and develop and modify their own behaviour as a result A wide diversity of species is discussed in this book some of which have never been discussed in this context before and particular reference is made to their natural life strategies Social learning in humans is also considered by comparison with other mammals especially in their technological and craft traditions Moreover a discussion is included of the social learning abilities of prehistoric hominids      Social Learning William Hoppitt, Kevin N. Laland, 2013-07-21 Many animals including humans acquire valuable skills and knowledge by copying others Scientists refer to this as social learning It is one of the most exciting and rapidly developing areas of behavioral research and sits at the interface of many academic disciplines including biology experimental psychology economics and cognitive neuroscience Social Learning provides a comprehensive practical guide to the research methods of this important emerging field William Hoppitt and Kevin N. Lala define the mechanisms thought to underlie social learning and demonstrate how to distinguish them experimentally in the laboratory They present techniques for detecting and quantifying social learning in nature including statistical modeling of the spatial distribution of behavior traits They also describe the latest theory and empirical findings on social learning strategies and introduce readers to mathematical methods and models used in the study of cultural evolution This book is an indispensable tool for researchers and an essential primer for students Provides a comprehensive practical guide to social learning research Combines theoretical and empirical approaches Describes techniques for the laboratory and the field Covers social learning mechanisms and strategies statistical modeling techniques

for field data mathematical modeling of cultural evolution and more

### **Encyclopedia of the Sciences of Learning**

Norbert M. Seel, 2011-10-05 Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i.e. how they acquire, organize and deploy knowledge and skills. The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation, cognition, metacognition etc. and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology. Beyond folk psychology and its naive theories of learning, psychological learning theories can be grouped into some basic categories such as behaviorist learning theories, connectionist learning theories, cognitive learning theories, constructivist learning theories and social learning theories. Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology, education, information science, biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence. As a consequence, machine learning struck a chord in the 1980s and became an important field of the learning sciences in general. As the learning sciences became more specialized and complex, the various fields of interest were widely spread and separated from each other as a consequence; even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely. The Encyclopedia of the Sciences of Learning provides an up-to-date, broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields including relevant areas of instruction, pedagogy, cognitive sciences and especially machine learning and knowledge engineering. This modern compendium will be an indispensable source of information for scientists, educators, engineers and technical staff active in all fields of learning. More specifically, the Encyclopedia provides fast access to the most relevant theoretical terms, provides up-to-date, broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies, supplies clear and precise explanations of the theoretical terms, cross-references to related entries and up-to-date references to important research and publications. The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning; the entries are written by a distinguished panel of researchers in the various fields of the learning sciences.

*Animal Learning and Cognition* N. J. Mackintosh, 2013-10-22 How do animals learn? By what means can animals be conditioned? Shackelford, 2012-01-04 The Oxford Handbook of Comparative Evolutionary Psychology ambitiously brings together an eclectic and provocative body of work from some of the brightest minds in comparative psychology and evolutionary psychology highlighting the strengths and insights of each field Across chapters readers will come to appreciate the new field of comparative evolutionary psychology which successfully combines laboratory and field approaches drawing on diverse methodologies and theoretical viewpoints to elucidate the mysteries of animal behavior and cognition This comprehensive volume includes coverage of Unique specializations in a wide range of taxa from insects cephalopods reptiles corvids canines cetaceans and primates Communication cooperation social learning memory and cognition in different

species Controversial theories about the evolution of sometimes surprising abilities in species both phylogenetically close to and distant from humans Suitable for seasoned researchers and graduate students alike this volume reflects a range of views on human and non human behavior and cognition and advances these topics in a wide range of species     **The Oxford Handbook of Comparative Cognition** Thomas R. Zentall, Edward A. Wasserman, 2012-03-20 This comprehensive volume illustrates why an understanding of animal intelligence is essential in disclosing the nature of minds other than our own making it a fascinating volume for anyone curious about the state of modern comparative cognition     Genes and Behaviour David J. Hosken, John Hunt, Nina Wedell, 2019-01-29 Provides a broad snapshot of recent findings showing how the environment and genes influence behavior The great debate of nature versus nurture rages on but our understanding of the genetic basis of many behaviors has expanded over the last decade and there is now very good evidence showing that seemingly complex behaviours can have relatively simple genetic underpinnings but also that most behaviours have very complicated genetic and environmental architecture Studies have also clearly shown that behaviors and other traits are influenced not just by genes and the environment but also by the statistical interaction between the two This book aims to end the nature versus nurture argument by showing that behaviors are nature and nurture and the interaction between the two and by illustrating how single genes can explain some of the variation in behaviors even when they are seemingly complex Genes and Behaviour Beyond Nature Nurture puts to rest the nature versus nurture dichotomy providing an up to date synopsis of where we are how far we've come and where we are headed It considers the effects of a dual inheritance of genes and culture and genes and social environment and highlights how indirect genetic effects can affect the evolution of behavior It also examines the effect of non self genes on the behavior of hosts shines a light on the nature and nurturing of animal minds and invites us to embrace all the complexity nature and nurture generates and more Explores exciting new findings about behavior and where we go from here Features contributions by top scholars of the subject Seeks to end the nature versus nurture debate forever Genes and Behaviour Beyond Nature Nurture is a unique and eye opening read that will appeal to Ph D Students post doctoral fellows and researchers in evolution and behavior Additionally the book will also be of interest to geneticists sociologists and philosophers     *Culture Evolves* Andrew Whiten, 2012 Culture broadly defined as all we learn from others that endures for long enough to generate customs and traditions shapes vast swathes of our lives and has allowed the human species to dominate the planet in an evolutionarily unique way Culture and cultural evolution are uniquely significant phenomena in evolutionary biology they are products of biological evolution yet they supplement genetic transmission with social transmission thus achieving a certain independence from natural selection However cultural evolution nevertheless expresses key Darwinian processes itself and also interacts with genetic evolution Just how culture fits into the grander framework of evolution is a big issue though yet one that has received relatively little scientific attention compared to for example genetic evolution Our capacity for culture appears so distinctive among animals that it is often

thought to separate we cultural beings from the rest of nature and the Darwinian forces that shape it Culture Evolves presents a different view arising from the recent discoveries of a diverse range of disciplines that focus on evolutionary continuities First recent studies reveal that learning from others and the transmission of traditions are more widespread and significant across the animal kingdom than earlier recognized helping us understand the evolutionary roots of culture Second archaeological discoveries have pushed back the origins of human culture to much more ancient times than traditionally thought These developments together suggest important continuities between animal and human culture A third new array of discoveries concerns the later diversification of human cultures where the operations of Darwinian like cultural evolutionary processes are increasingly identified Finally surprising discoveries have been made about the imprint of cultural evolution in children s predisposition to acquire culture The result of a major interdisciplinary meeting held by the Royal Society and the British Academy this book presents the work of leading experts from the fields of ethology behavioural ecology primatology comparative psychology archaeology anthropology evolutionary biology and developmental psychology

A Behavior Analytic View of Child Development Henry D Schlinger Jr,2013-11-21 Author Henry D Schlinger Jr provides the first text to demonstrate how behavior analysis a natural science approach to human behavior can be used to understand existing research in child development The text presents a behavior analytic interpretation of fundamental research in mainstream developmental psychology offering a unified theoretical understanding of child development Chapters examine mnemonic motor perceptual cognitive language and social development

**The Evolution of Culture** Stefan Linquist,2017-03-02 Recent years have seen a transformation in thinking about the nature of culture Rather than viewing culture in opposition to biology a growing number of researchers now regard culture as subject to evolutionary processes Recent developments in this field have shifted some of the traditional academic fault lines Alliances are forming between researchers trained in anthropology evolutionary biology psychology and philosophy Meanwhile several distinct schools of thought have appeared which differ in their vision of what an evolutionary approach to culture should look like This volume contains some of the most influential publications on these subjects from the past few decades A theoretical background chapter and critical introduction identify the core issues at stake in the new study of cultural evolution These chapters are followed by sections on each of the four dominant approaches the phylogenetic approach memetics dual inheritance theory and niche construction Following these are two chapters on closely related topics the psychological mechanisms of culture and the existence of culture in non human animals Overall this volume provides an up to date overview of some of the most exciting trends in contemporary evolutionary thought

**The Evolution of Cognition** Cecilia M. Heyes,Ludwig Huber,2000 In the last decade evolutionary psychology has come to refer exclusively to research on human mentality and behavior motivated by a nativist interpretation of how evolution operates This book encompasses the behavior and mentality of nonhuman as well as human animals and a full range of evolutionary approaches Rather than a collection by and for the like minded it is a debate

about how evolutionary processes have shaped cognition The debate is divided into five sections Orientations on the phylogenetic ecological and psychological comparative approaches to the evolution of cognition Categorization on how various animals parse their environments how they represent objects and events and the relations among them Causality on whether and in what ways nonhuman animals represent cause and effect relationships Consciousness on whether it makes sense to talk about the evolution of consciousness and whether the phenomenon can be investigated empirically in nonhuman animals and Culture on the cognitive requirements for nongenetic transmission of information and the evolutionary consequences of such cultural exchange Contributors Bernard Balleine Patrick Bateson Michael J Beran M E Bitterman Robert Boyd Nicola Clayton Juan Delius Anthony Dickinson Robin Dunbar D P Griffiths Bernd Heinrich Cecilia Heyes William A Hillix Ludwig Huber Nicholas Humphrey Masako Jitsumori Louis Lefebvre Nicholas Mackintosh Euan M Macphail Peter Richerson Duane M Rumbaugh Sara Shettleworth Martina Siemann Kim Sterelny Michael Tomasello Laura Weiser Alexandra Wells Carolyn Wilczynski David Sloan Wilson

**Playback and Studies of Animal Communication** Peter K.

McGregor, 2013-11-11 Playback is the technique of rebroadcasting natural or synthetic signals to animals and observing their response The ability to present a putative signal in isolation without the potential confounding effects of other activities of the signaller is the main reason for the depth and range of our knowledge of communication systems To date playback of sound signals has predominated but playback of electric signals and even video playback of visual signals suggests that playback will become just as prevalent in studies of communication in other sensory modalities This book is one of the outcomes of a workshop on playback held at Thombridge Hall in the Peak District National Park England during August 1991 There were two reasons for organising the workshop First the considerable and lively debate in the literature about the design and analysis of playback experiments the pseudoreplication debate was in danger of generating more heat than light A workshop forum seemed the obvious place to clarify and if possible resolve the debate Second with the number of new playback and analysis techniques increasing rapidly it seemed an opportune moment to discuss these techniques and to review some rapidly developing areas of interest in sound communication

**Advances in the Study of Behavior**

, 2002-01-21 The aim of Advances in the Study of Behavior remains as it has been since the series began to serve the increasing number of scientists who are engaged in the study of animal behavior by presenting their theoretical ideas and research to their colleagues and to those in neighboring fields We hope that the series will continue its contribution to the development of the field as its intended role was phrased in the Preface to the first volume in 1965 Since that time traditional areas of animal behavior have achieved new vigor by the links they have formed with related fields and by the closer relationship that now exists between those studying animal and human subjects Advances in the Study of Behavior Volume 31 continues to serve scientists across a wide spectrum of disciplines Focusing on new theories and research developments with respect to behavioral ecology evolutionary biology and comparative psychology these volumes foster cooperation and

communications in these dense fields      *The Human Evolutionary Transition* Magnus Enquist, Stefano Ghirlanda, Johan Lind, 2023-02-28 A major new theory of why human intelligence has not evolved in other species The Human Evolutionary Transition offers a unified view of the evolution of intelligence presenting a bold and provocative new account of how animals and humans have followed two powerful yet very different evolutionary paths to intelligence This incisive book shows how animals rely on robust associative mechanisms that are guided by genetic information which enable animals to sidestep complex problems in learning and decision making but ultimately limit what they can learn Humans embody an evolutionary transition to a different kind of intelligence one that relies on behavioral and mental flexibility The book argues that flexibility is useless to most animals because they lack sufficient opportunities to learn new behavioral and mental skills Humans find these opportunities in lengthy childhoods and through culture Blending the latest findings in fields ranging from psychology to evolutionary anthropology The Human Evolutionary Transition draws on computational analyses of the problems organisms face extensive overviews of empirical data on animal and human learning and mathematical modeling and computer simulations of hypotheses about intelligence This compelling book demonstrates that animal and human intelligence evolved from similar selection pressures while identifying bottlenecks in evolution that may explain why human like intelligence is so rare
