Measurements in the Social Sciences Hubert M. Blalock, 1974 Among the frustrations constantly confronting the social scientist are those associated with the general process of measurement The importance of good measurement has long been recognized in principle but it has often been neglected in practice in many of the social sciences Now that the methodological tools of multivariate analysis simultaneous equation estimation and causal modeling are diffused more widely into the social sciences and now that the very serious implications of random and non random measurement errors are being systematically investigated it is all the more important that social scientists give top priority to the quality of their data and the clarity of their theoretical conceptualizations as well as to methods for analyzing fallible data This book deals with selected problems of measurement and is written for graduate students and professional social scientists particularly in the technically less developed fields of sociology political science and anthropology The book is organized so that in general one proceeds from problems of data collection to those of data analysis It is not intended to be a complete work covering all types of measurement problems that have arisen in the social sciences Instead it represents a

series of studies of topics that are deemed to be crucial for the advancement of social science research but which have not received sufficient attention in most of the social sciences The basic purpose is to stimulate further methodological research on measurement and to study the ways in which knowledge that has been accumulated in some fields may be generalized so that it may be applied to others The book is divided into three major parts Part I is concerned with applying scaling approaches developed in psychometrics to problems that arise in other social sciences The focus is on finding better ways to ask questions of respondents so as to raise the level of measurement above that of simple ordinal scales Part II focuses on multiple indicator theory and strategies as applied to relatively complex models and to change data In this section the emphasis shifts to how one analyzes fallible data through the construction of explicit measurement error models Part III deals with the statistical analysis of ordinal data including the interpretation and empirical behaviors of various ordinal measures of association The final chapter written by the editor discusses how ordered metric assumptions may be used to make more powerful predictions than those characterizing much of contemporary social science H M Blalock Jr 1926 1991 was Professor Department of Sociology the University of Washington Seattle He was recipient of the 1973 ASA Samuel Stouffer Prize and was a Fellow of the American Statistical Association and the American Academy of Arts and Sciences and is a member of the National Academy of Sciences He was the 70th president of the American Sociological Association

Methods of Social Research Kenneth D. Bailey, 1994 An introduction for undergraduates to every stage of sociological research showing how to deal effectively with typical problems they might encounter The book is fully updated to include examples from the LA riots and the 1992 presidential elections *Introduction to Structural Equation Models* Otis Dudley Duncan, 2014-06-28 Introduction to Structural Equation Models prepares the reader to understand the recent sociological literature on the use of structural equation models in research and discusses methodological questions pertaining to such models The material in first seven chapters is almost entirely standard with the remaining four introducing progressively more open ended issues seducing the reader into beginning to think for himself about the properties of models or even to suggest problems that may intrigue the advanced student **Cognition, Aging and Self-Reports** Norbert Schwarz, Denise Park, Barbel Knauper, Seymour Sudman, 1998-09-28 First Published in 1998 This book provides a state of the art overview of age related changes in cognitive functioning and explores the implications of these changes for the self report of attitudes and behaviors The contributors are leading researchers in cognitive aging and survey methodology and chapters are written to be accessible to non specialists The first part of the book provides an authoritative review of the current state of cognitive aging research covering topics such as working memory inhibition autobiographical memory metacognition and attention A second section examines the unique issues associated with aging language comprehension and interpersonal communication while the final section reviews researcher into age related differences in survey responding Of particular interest is how age related changes in cognitive and communicative functioning influence the question answering process in research situations

Experimental research illustrates that older and younger respondents are differentially affected by question order question wording and other features of questionnaire design As a result many age related differences in reported attitudes and behaviors may reflect age related differences in the response process rather than differences in respondents actual attitudes or behaviors Implications for research design and psychological theorizing are addressed and practical solutions are offered As such the book will be of interest not only to those in the fields of cognitive aging and gerontology but also to survey methodologists and researchers in public opinion marketing and related fields who rely on respondents answers to questions in their research

Measurement in the Social Sciences Hubert M. Blalock, 2017-09-08 Among the frustrations constantly confronting the social scientist are those associated with the general process of measurement The importance of good measurement has long been recognized in principle but it has often been neglected in practice in many of the social sciences Now that the methodological tools of multivariate analysis simultaneous equation estimation and causal modeling are diffused more widely into the social sciences and now that the very serious implications of random and non random measurement errors are being systematically investigated it is all the more important that social scientists give top priority to the quality of their data and the clarity of their theoretical conceptualizations The book is organized so that one proceeds from problems of data collection to those of data analysis It is not intended to be a complete work covering all types of measurement problems that have arisen in the social sciences Instead it represents a series of studies that are deemed to be crucial for the advancement of social science research but which have not received sufficient attention in most of the social sciences The basic purpose is to stimulate further methodological research on measurement and to study the ways in which knowledge that has been accumulated in some fields may be generalized Part I is concerned with applying scaling approaches developed in psychometrics to problems that arise in other social sciences The focus is on finding better ways to ask questions of respondents so as to raise the level of measurement above that of simple ordinal scales Part II focuses on multiple indicator theory and strategies as applied to relatively complex models and to change data In this section the emphasis shifts to how one analyzes fallible data through the construction of explicit measurement error models Part III deals with the statistical analysis of ordinal data including the interpretation and empirical behaviors of various ordinal measures of association

Margins of Error Duane F. Alwin, 2007-07-30 Enhance the quality of survey results by recognizing and reducing measurement errors *Margins of Error A Study of Reliability in Survey Measurement* demonstrates how and why identifying the presence and extent of measurement errors in survey data is essential for improving the overall collection and analysis of the data The author outlines the consequences of ignoring survey measurement errors and also discusses ways to detect and estimate the impact of these errors This book also provides recommendations of improving the quality of survey data Logically organized and clearly written this book Deconstructs the data gathering process into six main elements of the response process question adequacy comprehension accessibility retrieval motivation and communication

Provides an exhaustive review of valuable reliability estimation techniques that can be applied to survey data Identifies the types of questions and interviewer practices that are essential to the collection of reliable data Addresses hypotheses regarding which survey questions sources of information and questionnaire formats produce the most reliable data In conjunction with research data gathered on nearly 500 survey measures and the application of an empirical approach grounded in classical measurement theory this book discusses the sources of measurement error and provides the tools necessary for improving survey data collection methods Margins of Error enables statisticians and researchers in the fields of public opinion and survey research to design studies that can detect estimate and reduce measurement errors that may have previously gone undetected This book also serves as a supplemental textbook for both undergraduate and graduate survey methodology courses Methods of Social Research, 4th Edition Kenneth Bailey,2008-06-30 An introduction for undergraduates to every stage of sociological research showing how to deal effectively with typical problems they might encounter The book is fully updated to include examples from the LA riots and the 1992 presidential elections Historical Social Psychology (Psychology Revivals) Kenneth Gergen,Mary Gergen,2014-01-27 The vast majority of research in social psychology focuses on momentary events an attitude is changed dissonance is reduced a cognition is primed and so on Little attention is a paid to the unfolding of events over time to social life as an ongoing process in which events are related in various ways as life unfolds Originally published in 1984 Historical Social Psychology opens a space for theory and research in which temporal process is central Contributors to this broad ranging work provide a rich range of perspectives from the theoretical to the methodological from micro sequences to the life span and from contemporary history to the long dur e Together these authors set the stage for a major shift in the focus of social psychological inquiry **Content Analysis** Klaus Krippendorff,2018-05-09 What matters in people s social lives What motivates and inspires our society How do we enact what we know Since the first edition published in 1980 Content Analysis has helped shape and define the field In the highly anticipated Fourth Edition award winning scholar and author Klaus Krippendorff introduces readers to the most current method of analyzing the textual fabric of contemporary society Students and scholars will learn to treat data not as physical events but as communications that are created and disseminated to be seen read interpreted enacted and reflected upon according to the meanings they have for their recipients Interpreting communications as texts in the contexts of their social uses distinguishes content analysis from other empirical methods of inquiry Organized into three parts Content Analysis first examines the conceptual aspects of content analysis then discusses components such as unitizing and sampling and concludes by showing readers how to trace the analytical paths and apply evaluative techniques The Fourth Edition has been completely revised to offer readers the most current techniques and research on content analysis including new information on reliability and social media Readers will also gain practical advice and experience for teaching academic and commercial researchers how to conduct content analysis **Handbook of Survey Research** Peter H. Rossi,James D Wright,Andy B.

Anderson, 2013-10-22 *Handbook of Survey Research* provides an introduction to the theory and practice of sample survey research. It addresses both the student who desires to master these topics and the practicing survey researcher who needs a source that codifies, rationalizes, and presents existing theory and practice. The handbook can be organized into three major parts. Part 1 sets forth the basic theoretical issues involved in sampling, measurement, and management of survey organizations. Part 2 deals mainly with hands-on how to do it issues: how to draw theoretically acceptable samples, how to write questionnaires, how to combine responses into appropriate scales and indices, how to avoid response effects and measurement errors, how actually to go about gathering survey data, how to avoid missing data, and what to do when you cannot, and other topics of a similar nature. Part 3 considers the analysis of survey data with separate chapters for each of the three major multivariate analysis modes and one chapter on the uses of surveys in monitoring overtime trends. This handbook will be valuable both to advanced students and to practicing survey researchers seeking a detailed guide to the major issues in the design and analysis of sample surveys and to current state of the art practices in sample surveys. [LISREL 8](#) Karl G. Jöreskog, Dag Sörbom, 1993. Simple examples, Multi sample examples, Path diagrams, Fitting and testing, Lisrel output, Simplis reference, Computer exercises. *Causal Models in Experimental Designs* H. M. Blalock, 2017-07-12. This is a companion volume to *Causal Models in the Social Sciences*; the majority of articles concern panel designs involving repeated measurements, while a smaller cluster involve discussions of how experimental designs may be improved by more explicit attention to causal models. All of the papers are concerned with complications that may occur in actual research designs as compared with idealized ones that often become the basis of textbook discussions of design issues. [Analysis of Change](#) Uwe Engel, Jost Reinecke, 2012-05-07. No detailed description available for [Analysis of Change](#). [Handbook of Survey Research](#) Peter V. Marsden, James D. Wright, 2010-04-28. With chapters on sampling, measurement, questionnaire construction, and question writing, survey implementation and management, survey data analysis, special types of surveys, and integrating surveys with other data collection methods, this title includes topics such as measurement models, the role of cognitive psychology, and surveying networks. *New Methods in Reading Comprehension Research* David E. Kieras, Marcel A. Just, 2018-04-17. Published in 1984, this volume presents methodologies for studying the ongoing psychological processes that occur as a person reads a text, as well as discussing the major findings that these methodologies have produced to provide a handbook of reading comprehension research techniques. Focusing on the comprehension processes that occur when a person is reading rather than the representation that remains after the text has been read, the methodologies use measures such as reading times that reflect ongoing processes rather than relying exclusively on conventional measures of memory performance such as recall. These methods make use of computer technology for rapid and flexible stimulus representation and data acquisition. This book will allow researchers and students to select appropriate methodologies to investigate a range of fascinating questions about reading comprehension. *On Durkheim's Rules of Sociological Method (Routledge Revivals)*

Mike Gane, 2010-11 This radical appraisal of Durkheim's method first published in 1988 argues that fundamental errors have been made in interpreting Durkheim. Mike Gane argues that to understand *The Rules* it is necessary also to understand the context of the French society in which the book was written. He explores the cultural and philosophical debates which raged in France during the period when Durkheim prepared the book and establishes the real and unsuspected complexity of Durkheim's position, its formal complexity, its epistemological complexity and its historical complexity.
