Terrestrial Eocene Oligocene Transition In North America:

The Terrestrial Eocene-Oligocene Transition in North America Donald R. Prothero, Robert J. Emry, 1996-06-13 The transition from the Eocene to the Oligocene epoch occurring approximately 47 to 30 million years ago was the most dramatic episode of climatic and biotic change since the demise of the dinosaurs The mild tropical climates of the Paleocene and early Eocene were replaced by modern climatic conditions and extremes including glacial ice in Antarctica The first part of this book summarizes the latest information in the dating and correlation of the strata of late middle Eocene through early Oligocene age in North America The second part reviews almost all the important terrestrial reptiles and mammals found near the Eocene Oligocene boundary in the White River Chronofauna from the turtles snakes and lizards to the common rodents carnivores oreodonts and deer of the Badlands This is the first comprehensive treatment of these topics in over sixty years and will be invaluable to vertebrate paleontologists geologists mammalogists and evolutionary biologists **Late**

Cretaceous and Cenozoic Mammals of North America Michael O. Woodburne, 2004-04-21 This book places into modern context the information by which North American mammalian paleontologists recognize divide calibrate and discuss intervals of mammalian evolution known as North American Land Mammal Ages It incorporates new information on the systematic biology of the fossil record and utilizes the many recent advances in geochronologic methods and their results The book describes the increasingly highly resolved stratigraphy into which all available temporally significant data and applications are integrated Extensive temporal coverage includes the Lancia part of the Late Cretaceous and geographical coverage includes information from Mexico an integral part of the North American fauna past and present *The Evolution of North American Rhinoceroses* Donald R. Prothero, 2005-03-07 An essential reference for all researchers working on the evolution of North American mammals **The Beginning of the Age of Mammals** Kenneth D. Rose, 2006-09-26 Publisher description

The White River Badlands Rachel C. Benton, Dennis O. Terry, Emmett Evanoff, H. Gregory McDonald, 2015-05-25 This guide to the South Dakota region that houses the world's richest fossil beds does an excellent job of presenting the current state of knowledge Choice The forbidding Big Badlands in Western South Dakota contain the richest fossil beds in the world Even today these rocks continue to yield new specimens brought to light by snowmelt and rain washing away soft rock deposited on a floodplain long ago The quality and quantity of the fossils are superb most of the species to be found there are known from hundreds of specimens The fossils in the White River Group and similar deposits in the American west preserve the entire late Eocene through the middle Oligocene roughly 35 30 million years ago and more than thirty million years after non avian dinosaurs became extinct The fossils provide a detailed record of a period of abrupt global cooling and what happened to creatures who lived through it This book is a comprehensive reference to the sediments and fossils of the Big Badlands and also touches on National Park Service management policies that help protect such significant fossils Includes photos and illustrations A worthy successor to the work of O Harra *Journal of Vertebrate Paleontology* *Fossil Record 4*

Robert M. Sullivan, Spencer G. Lucas, 2015 *California's Amazing Geology* Donald R. Prothero, 2024-03-21 California has some of the most distinctive and unique geology in the United States It is the only state with all three types of plate boundaries an extraordinary history of earthquakes and volcanoes and many rocks and minerals found nowhere else The Golden State includes both the highest and lowest points in the continental US and practically every conceivable geological feature known This book discusses not only the important geologic features of each region in California but also the complex geologic four dimensional puzzle of how California was assembled beginning over two billion years ago The author provides an up to date and authoritative review of the geology and geomorphology of each geologic province as well as recent revelations of the tectonic history of California s past There are separate chapters on some of California s distinctive geologic resources including gold oil water coastlines and fossils An introductory section describes basic rock and mineral types and fundamental aspects of plate tectonics so that students and other readers can make sense of the bizarre wild and crazy jigsaw puzzle that is California s geological history In this second edition the book has an entirely new final section California s Environmental Hazards and Challenges with new chapters on California s landslides air and water pollution renewable energy and the future of climate change in California Key Features Thoroughly updates the market leading textbook on California s geology Is written by an author with 30 years of teaching geology and leading field trips in California Introduces California s unique geological history Covers fundamentals of geology Characterizes specific geographical regions of California Describes major geological resources of California Summarizes the paleontology of California Reviews the likely impact of climate change on California s environment Related Titles Hollocher K A Pictorial Guide to Metamorphic Rocks in the Field ISBN 978 11380 2630 8 Glavovic B et al Climate Change and the Coast Building Resilient Communities ISBN 978 04154 6487 1 *Depositional Environments, Lithostratigraphy, and Biostratigraphy of the White River and Arikaree Groups (Late Eocene to Early Miocene, North America)* Dennis O. Terry, Hannan E. LaGarry, Robert M. Hunt (Jr.), 1998-01-01

Paleogene Mammals Spencer G. Lucas, Kate E. Zeigler, Peter E. Kondrashov, 2004-01-01 *Horns, Tusks, and Flippers* Donald R. Prothero, Robert M. Schoch, 2002 Since the extinction of the dinosaurs hoofed mammals have been the planet s dominant herbivores Native to all continents except Australia and Antarctica recent paleontological and biological discoveries have deepened understanding of their evolution This text reveals their evolutionary history
