Buchanan,2006 Gunpowder studies are still in their infancy despite the long standing civil and military importance of this explosive since its discovery in China in the mid ninth century AD This volume is the first to develop the implications of the subject not just in the sense of relating it to changing military technologies but in that of seeing the securing of gunpowder supplies as fundamental to the power of the state and imperial pretensions *Dangerous Energy* Wayne D. Cocroft,2014-06-15 This book comprises a national study of the explosives industry and provides a framework for identification of its industrial archaeology and social history Few monuments of gunpowder manufacture survive in Britain from the Middle Ages although its existence is documented Late 17th century water powered works are identifiable but sparse In the later 18th century however the industry was

transformed by state acquisition of key factories notably at Faversham and at Waltham Abbey In the mid 19th century developments in Britain paralleled those in continental Europe and in America namely a shift to production on an industrial scale related to advances in armaments technology The urgency and large scale demands of the two world wars brought state directed or state led solutions to explosives production in the 20th century The book's concluding section looks at planning preservation conservation and presentation in relation to prospective future uses of these sites , Regions and Industries Pat Hudson,1989-10-26 In this book a team of distinguished historians contend that industrialization in Britain and elsewhere occurred first and foremost within regions rather than in the nation as a whole *Mining Industry and Review* ,1899 *Tree-spotting* Nell Bennett,Ros Bennett,2022-09-13 A beautifully illustrated guide to the marvellous and varied world of trees and a fascinating introduction to the hidden secrets of 52 British species Botanist and ecologist Ros Bennett has spent a lifetime helping people understand and identify plants and always hoped her daughter Nell would grow up to share her love of the natural world During Nell's childhood years they spent much time exploring the local woods together Here Nell discovered the visual and tactile beauty of trees In Tree spotting Ros and Nell have combined their backgrounds and talents to show you through Ros's extensive experience and Nell's exquisite illustrations how to identify 52 British trees simply and confidently A beautiful and captivating insight into the wonderful world of trees Tree spotting burrows down into the history and hidden secrets of each species It explores how our relationship with trees can be very personal and will bring you closer to the natural world around you The Boy's Book of Industrial Information Elisha Noyce,2022-06-03 The Boy's Book of Industrial Information by Elisha Noyce gives a clear and brief description of the materials processes and apparatus made use of in the various examples of industry and skill constantly before our eyes so that the reader may acquire a knowledge of such things and an interest in those who by their hard work and patient ingenuity supply them The contents include Natural Products Manufactured Products Products of Skilled Labour Arts and Trade Processes **Idealism and Materialism** Kiyoshi Kobayashi,2021-01-28 Though the series is a coherent unit with the unified purpose each book is designed to be read independently from the others The first three books are preparing for the proposal and the last book is augmenting the proposal His core proposition is in Book Four The Third Prophecy in fact it can be expressed in one simple sentence To love a child is not to make one The Industrial Revolutionaries Gavin Weightman,2010-05-18 Anyone with a passing interest in economic history will thoroughly enjoy this account of how industry transformed the world The Seattle Times In less than one hundred and fifty years an unlikely band of scientists spies entrepreneurs and political refugees took a world made of wood and powered by animals wind and water and made it into something entirely new forged of steel and iron and powered by steam and fossil fuels This entertaining and informative account weaves together the dramatic stories of giants such as Edison Watt Wedgwood and Daimler with lesser known or entirely forgotten characters including a group of Japanese samurai who risked their lives to learn the secrets of the West

The Heirs of Archimedes
Brett D. Steele, Tamera Dorland, 2005 Essays analyze the connections between science and technology and military power in the late medieval Renaissance and Enlightenment periods The integration of scientific knowledge and military power began long before the Manhattan Project In the third century BC Archimedes was renowned for his research in mechanics and mathematics as well as for his design and coordination of defensive siegecraft for Syracuse during the Second Punic War This collection of essays examines the emergence during the early modern era of mathematicians chemists and natural philosophers who along with military engineers navigators and artillery officers followed in the footsteps of Archimedes and synthesized scientific theory and military practice It is the first collaborative scholarly assessment of these early military scientific relationships which have been long neglected by scholars both in the history of science and technology and in military history From a historical perspective this volume investigates the deep connections between two central manifestations of Western power examining the military context of the Scientific Revolution and the scientific context of the Military Revolution Unlike the classic narratives of the Scientific Revolution that focus on the theories of and conflicts between Aristotelian and Platonic worldviews this volume highlights the emergence of the Archimedean ideal in which a symbiosis exists between the supply of mechanistic science and the demand for military capability From a security studies perspective this work presents an in depth study of the central components of military power as well as their dynamic interactions in the political acquisitional operational and tactical domains The essays in this volume reveal the intellectual and cultural struggles to enhance the capabilities of these components an exercise in transforming military power that remains relevant for today's armed forces The volume sets the stage by examining the innovation of gunpowder weaponry in both the Christian and the Islamic states of the late medieval and Renaissance eras It then explores such topics as the cultural resistance to scientific techniques and the relationship between early modern science and naval power particularly the intersecting developments in mathematics and oceanic navigation Other essays address the efforts of early practitioners and theorists of chemistry to increase the power and consistency of gunpowder The final essays analyze the application of advanced scientific knowledge and Enlightenment ideals to the military engineering and artillery organizations of the eighteenth century The volume concludes by noting the global spread of the Archimedean ideal during the nineteenth century as an essential means for resisting Western imperialism
