Bonnie Blair O'Connor, 2010-08-03 The popularity and practice of alternative medicine continues to expand at astonishing rates In *Healing Traditions* Bonnie Blair O Connor considers the conflicts that arise between the values and assumptions of Western scientific medicine and those of unconventional health systems Providing in depth examples of the importance and benefits of alternative health practices including the extraordinarily extensive and sophisticated HIV AIDS alternative therapies movement O Connor identifies ways to integrate alternative strategies with orthodox medical treatments in order to ensure the best possible care for patients In spite of the long standing prediction that as science and medicine progressed and education became more generally available unconventional systems would die out they have persisted with undiminished vitality They have in fact experienced a reinvigoration and expansion during the last fifteen to twenty years In the United States this renewal is fueled by people representing a wide cross section of American society and most of them also use conventional medicine This eclecticism can result in conflicts between the values and assumptions of Western scientific medicine and those of unconventional health systems O Connor demonstrates the importance of understanding how various belief systems interact and how this interaction affects health care She argues that through neutral observation and thorough description of health belief systems it is possible to gain an understanding of those systems to identify likely points of conflict among systems especially conflicts that may occur in conventional care settings and to intervene in ways that ensure the best possible care for patients **Books in Print**, 1991 [Future Survey Annual 1985](#) Michael

Functional Fracture Bracing Augusto Sarmiento,Loren Latta,1995-01-16 At the writing of this book the United States is in the midst of an intense public debate concerning a widely perceived need for reform of the Health Care Delivery System The reform is primarily aimed at the provision of medical insurance to a large segment of the population currently deprived of that coverage and to

the reduction of the escalating costs of medical care Solutions to the existing problems have been elusive because the causes of the dilemma are multifactorial complex and difficult to identify clearly There is however general consensus that the use and abuse of technology has played a major role in the growing costs of medical care The importance of fracture care in the overall financing of the health care reform is significant since injuries to the musculoskeletal system are responsible for a very large percentage of the general expenditures in this area The cost is not limited to hospitalization and professional services but also impacts the economy with temporary or permanent interruption of individual productivity
