Sound Mutations The Morphophonology Of Chaha:

Sound Mutations Degif Petros Banksira,2000-10-20 This monograph which evolved from the first linguistic dissertation to be written on Chaha an Ethiopian Semitic language is also the first book to deal exclusively with the phonology and morphology of the language It is an exhaustive description and analysis by a native speaker of the sound patterns of this often misdescribed language and deserves to be the standard reference on the phonology of Chaha The book presents a vast amount of new data and it unearths some fascinating new generalizations about double linking geminate devoicing nasalization of liquid consonants phonotactic constraints within morphemes and palatalization and labialization triggered by decomposition of a single back high round vowel The book also challenges the categorization of Semitic subject affixes into prefix and suffix sets instead proposing a novel classification in which all prefixes and some suffixes form a set that excludes the remaining suffixes The generalizations and analyses are significant not only for the study of Chaha and Semitic languages but also for phonological theory in general

Language Processing and Acquisition in Languages of Semitic, Root-based, Morphology Joseph Shimron,2003 This book puts together contributions of linguists and psycholinguists whose main interest here is the representation of Semitic words in the mental lexicon of Semitic language speakers The central topic of the book confronts two views about the morphology of Semitic words The point of the argument is Should we see Semitic words morphology as root based or word based The proponents of the root based approach present empirical evidence demonstrating that Semitic language speakers are sensitive to the root and the template as the two basic elements bound morphemes of Semitic words Those supporting the word based approach present arguments to the effect that Semitic word formation is not based on the merging of roots and templates but that Semitic words are comprised of word stems and affixes like we find in Indo European languages The variety of evidence and arguments for each claim should force the interested readers to reconsider their views on Semitic morphology

Morphologies of Asia and Africa Alan S. Kaye,2007-06-23 In 1997 Eisenbrauns published the highly regarded two volume Phonologies of Asia and Africa edited by Alan Kaye with the assistance of Peter T Daniels and the book rapidly became the standard reference for the phonologies of the Afro Asiatic languages Now the concept has been extended and Kaye has assembled nearly 50 scholars to write essays on the morphologies of the same language group The coverage is complete copious and again will likely become the standard work in the field Contributors are an international Who s Who of Afro Asiatic linguistics from Appleyard to Leslau to Voigt It is with great sadness that we report the death of Alan Kaye on May 31 2007 while these volumes were in the final stages of preparation for the press Alan was diagnosed with bone cancer on May 1 while on research leave in the United Arab Emirates and was brought home to Fullerton by his son on May 22

Distributed Morphology Today Ora Matushansky,Alec P. Marantz,2013-07-19 Essays that offer original theoretical contributions in Distributed Morphology and highlight the lasting influence of Morris Halle a founder of the field This collection offers a snapshot of current research in Distributed Morphology highlighting the lasting influence of Morris Halle a pioneer in generative linguistics Distributed Morphology which integrates the morphological with the syntactic originated in Halle s work These essays written to mark his 90th birthday make original theoretical contributions to the field and emphasize Halle s foundational contributions to the study of morphology The authors primarily focus on the issues of locality exploring the tight connection of morphology to phonology syntax and semantics that lies at the core of Distributed Morphology The nature of phases the notion of a morpho syntactic feature allomorphy and exponence the synthetic analytic alternation stress assignment and syntactic agreement are all shown to link to more than one grammatical module Animated

discussion with students has been central to Halle's research and the development of Distributed Morphology has been shaped and continued by his students many of whom have contributed to this volume Halle's support, advice and enthusiasm encouraged the research exemplified here. In the Halleian tradition these papers are sure to inspire all generations of morphologists. Stekauer, 2014-09-25. The Oxford Handbook of Derivational Morphology is intended as a companion volume to The Oxford Handbook of Compounding (OUP 2009). Written by distinguished scholars, its 41 chapters aim to provide a comprehensive and thorough overview of the study of derivational morphology. The handbook begins with an overview and a consideration of definitional matters, distinguishing derivation from inflection on the one hand and compounding on the other. From a formal perspective, the handbook treats affixation, prefixation, suffixation, infixation, circumfixation, etc., conversion, reduplication, root and pattern, and other templatic processes, as well as prosodic and subtractive means of forming new words. From a semantic perspective, it looks at the processes that form various types of adjectives, adverbs, nouns, and verbs, as well as evaluatives and the rarer processes that form function words. The book also surveys derivation in fifteen language families that are widely dispersed in terms of both geographical location and typological characteristics. **The Semitic Languages**, Stefan

Weninger, 2011-12-23. The handbook The Semitic Languages offers a comprehensive reference tool for Semitic Linguistics in its broad sense. It is not restricted to comparative Grammar, although it covers also comparative aspects including classification. By comprising a chapter on typology and sections with sociolinguistic focus and language contact, the conception of the book aims at a rather complete, unbiased description of the state of the art in Semitics. Articles on individual languages and dialects give basic facts, as location, numbers of speakers, scripts, numbers of extant texts, and their nature, attestation, where appropriate, and salient features of the grammar and lexicon of the respective variety. The handbook is the most comprehensive treatment of the Semitic language family since many decades. **Grammatical and Sociolinguistic**

Aspects of Ethiopian Languages, Derib Ado, Almaz Wasse, Gelagay, Janne Bondi Johannessen, 2021-04-23. The focus of this unique publication is on Ethiopian languages and linguistics. Not only major languages such as Amharic and Oromo receive attention, but also lesser studied ones like Sezo and Nuer are dealt with. The Gurage languages, that often present a descriptive and sociolinguistic puzzle to researchers, have received ample coverage. And for the first time in the history of Ethiopian linguistics, two chapters are dedicated to descriptive studies of Ethiopian Sign Language, as well as two studies on acoustic phonetics. Topics range over a wide spectrum of issues, covering the lexicon, sociolinguistics, socio-cultural aspects, and micro-linguistic studies on the phonology, morphology, and syntax of Ethiopian languages. **Phi Theory**, Daniel

Harbour, David Adger, Susana Béjar, 2008-05-01. Phi features such as person, number, and gender present a rare opportunity

for syntacticians morphologists and semanticists to collaborate on a research enterprise in which they all have an equal stake and which they all approach with data and insights from their own fields This volume is the first to attempt to bring together these different strands and styles of research It presents the core questions major results and new directions of this emergent area of linguistic theory and shows how Phi Theory casts light on the nature of interfaces and the structure of the grammar The book will interest scholars and students of all aspects of linguistic theory at graduate level and above The Semitic Languages John Huehnergard, Na'ama Pat-El, 2019-02-18 The Semitic Languages presents a comprehensive survey of the individual languages and language clusters within this language family from their origins in antiquity to their present day forms This second edition has been fully revised with new chapters and a wealth of additional material New features include the following new introductory chapters on Proto Semitic grammar and Semitic linguistic typology an additional chapter on the place of Semitic as a subgroup of Afro Asiatic and several chapters on modern forms of Arabic Aramaic and Ethiopian Semitic text samples of each individual language transcribed into the International Phonetic Alphabet with standard linguistic word by word glossing as well as translation new maps and tables present information visually for easy reference This unique resource is the ideal reference for advanced undergraduate and postgraduate students of linguistics and language It will be of interest to researchers and anyone with an interest in historical linguistics linguistic typology linguistic anthropology and language development *Theory and description in African Linguistics* Emily Clem , Peter Jenks , Hannah Sande , 2019 The papers in this volume were presented at the 47th Annual Conference on African Linguistics at UC Berkeley in 2016 The papers offer new descriptions of African languages and propose novel theoretical analyses of them The contributions span topics in phonetics phonology syntax semantics and pragmatics and reflect the typological and genetic diversity of languages in Africa Four papers in the volume examine Areal Features and Linguistic Reconstruction in Africa and were presented at a special workshop on this topic held alongside the general session of ACAL **Rarities in phonetics and phonology** Natalia Kuznetsova, Cormac Anderson, Shelece Easterday, 2025-05-20 Rare phenomena play a key role in forming and challenging linguistic theory This volume presents multi faceted analyses of rarities in phonetics and phonology from a wide variety of theoretical standpoints Some contributions to the volume analyse language specific rare features placing them in a broader cross linguistic context and looking at a sum of their phonological phonetic and evolutionary properties at times also making connections to sociolinguistic factors Others consider the same or similar phenomena from different analytical angles with extensive cross referencing or take a broad analytical or typological stance towards rare phenomena and discuss what it means to be rare The volume provides a nuanced picture of phonetic and phonological rarities in genealogically diverse languages mostly lesser studied from around the globe Authors were encouraged to attempt to strike a middle ground between radical exoticisation of the rarities at hand describing them in idiosyncratic terms and radical normalisation underplaying the rarity of the phenomena at hand Highly theory specific or

technical terminology is avoided or explained carefully in order to make the book maximally accessible for a wide typologically minded audience

Distributed Reduplication John Frampton, 2009-08-14 An original and comprehensive approach to reduplication with extensive examples and case studies in many languages A convincing account of reduplicative phenomena has been a longstanding problem for rule based theories of morphophonology Many scholars believe that derivational phonology is incapable in principle of analyzing reduplication In *Distributed Reduplication* John Frampton demonstrates the adequacy of rule based theories by providing a general account within that framework and illustrating his proposal with extensive examples of widely varying reduplication schemes from many languages His analysis is based on new proposals about the structure of autosegmental representations Although Frampton offers many new ideas about the computations that are put to use in reduplicative phonology some fairly radical his intent is conservative to provide evidence that the model of the phonological computation developed by Chomsky and Halle in 1968 is fundamentally correct that surface forms are produced by the successive modification of underlying forms Frampton's theory accounts for the surface properties of reduplicative morphemes by operations that are distributed at various points in the morphophonology rather than by a single operation applied at a single point Lexical insertion prosodic adjustment and copying can each make a contribution to the output at different points in the computation of surface form Frampton discusses particular reduplicative processes in many languages as he develops his general theory The final chapter provides an extensive sequence of detailed case studies Appendixes offer additional material on the No Crossing Constraint the autosegmental structure of reduplicative representations linearization and concatenative versus nonconcatenative morphology This volume will play a major role in the main debate of current phonological research what is the nature of the phonological computation

Afroasiatic Studies in Memory of Robert Hetzron Charles G. Häberl, 2009-05-27 Robert Hetzron first organized the North American Conference on Afroasiatic Linguistics NACAL at the University of California Santa Barbara in 1973 and passed away only six months after it had completed a quarter century of annual meetings He would undoubtedly have been

pleased to know that NACAL is still going strong and that ten years after his passing it attracted no fewer than thirty six scholars from the United States Canada and eight other countries who presented on topics near and dear to his heart such as phonology morphology syntax language contact classification subgrouping and the history of scholarship in languages such as Amharic Arabic Aramaic Egyptian Hebrew Omotic and others as well as the groups to which they pertain Since he established it NACAL has served a unique role among the meetings of learned societies in North America Only a handful of organizations worldwide hold annual meetings dedicated to Afroasiatic linguistics and NACAL is one of a very small number of venues where linguists from all sub disciplines and schools of thought meet to share their research NACAL is also an academic nexus a unique node at which graduate students at the beginning of their careers rub shoulders with the native speakers of the languages which they study and with the titans of their fields men and women of an almost legendary stature such as Hetzron himself This volume contains sixteen contributions from these scholars on a broad cross section of topics within the field of Afroasiatic linguistics *The Languages and Linguistics of Africa* Tom Güldemann, 2018-09-10 This innovative handbook takes a fresh look at the currently underestimated linguistic diversity of Africa the continent with the largest number of languages in the world It covers the major domains of linguistics offering both a representative picture of Africa s linguistic landscape as well as new and at times unconventional perspectives The focus is not so much on exhaustiveness as on the fruitful relationship between African and general linguistics and the contributions the two domains can make to each other This volume is thus intended for readers with a specific interest in African languages and also for students and scholars within the greater discipline of linguistics *Impossible Persons* Daniel Harbour, 2016-10-28 A groundbreaking comprehensive formal theory of grammatical person that recasts its empirical foundations and re envisions its theoretical core Impossible Persons Daniel Harbour s comprehensive and groundbreaking formal theory of grammatical person upends understanding of a universal and ubiquitous grammatical category Breaking with much past work Harbour establishes three core theses one empirical one theoretical and one metatheoretical Together these redefine the data subsumed under the rubric of person simplify the feature inventory that a theory of person must posit and restructure the metatheory in which feature theory as a whole resides At its heart Impossible Persons poses a simple question of the possible versus the actual in how many ways could languages configure their person systems in how many do they configure them and what explains the size and shape of the shortfall Harbour s empirical thesis that the primary object of study for persons are partitions not syncretisms transforms a sea of data into a categorical problem of the attested and the absent Positing innovatively that features denote actions not predicates he shows that two features alone generate all and only the attested systems This apparently poor inventory yields rich explanatory dividends covering the morphological composition of person its interaction with number its connection to space and properties of its semantics and linearization Moreover the core properties of this approach are shared with Harbour s earlier work on number features Jointly these results establish an

important metatheoretical corollary concerning the balance between richness of feature semantics and restrictiveness of feature inventories This corollary holds deep implications for how linguists should approach feature theory in future
