Tertiary Basins Of Spain:

Tertiary Basins of Spain Peter F. Friend, 1996-01-26 This is the first book to deal comprehensively with Spain's tectonic and sedimentary history over the past sixty or so million years During Tertiary times Spain had suffered compressional collision between France and Africa and its Atlantic and Mediterranean coasts had been further modified by extensional rifting

Cenozoic Foreland Basins of Western Europe A. Mascle, 1998 The volume provides a modern synthesis of foreland basin stratigraphy and structural geology It covers the foothills and foreland basins of the northwestern Alps the Pyrenees and the Betic thrust belt The multidisciplinary approach includes both sedimentological and structural studies plus numerical modelling as a tool to quantify and integrate the geological data This book results from the Integrated Basin Studies Project which was funded by the European Commission More than 200 researchers from 38 institutions in 15 countries have collaborated in the IBS project Several papers from outside the project have also been included to provide the reader with a more comprehensive overview of Western Europe's Cenozoic foreland basins This volume concentrates on scientific research but many oil companies are actively exploring the foothills of thrust belts throughout the world

Sedimentary Processes, Environments and Basins Gary Nichols, Edward Williams, Chris Paola, 2009-03-05 For several decades Peter Friend has been one of the leading figures in sedimentary geology and throughout that time he has helped scores of other people by supervising doctoral students collaborating with colleagues especially in developing countries and selflessly sharing ideas with fellow geologists This collection of papers is a survey of the research frontier in basin dynamics a field Peter Friend helped initiate and a token of thanks from people who have benefited from an association with Peter during their careers The papers in this book fall into four themes Tectonics and sedimentation Landscape evolution and provenance Depositional systems and Fluvial sedimentation which reflect Peter's research interests and are all important areas of current research in sedimentary geology There are both case studies and review articles on these themes which reflect recent work but the collection can also be considered to be a sampler of sedimentary geology for anyone with broad interests in the Earth sciences

The Geology of Iberia: A Geodynamic Approach Cecilio Quesada, José Tomás Oliveira, 2019-05-28 Pursuing an innovative global approach this unique book provides an updated review of the geology of Iberia and its continental margins from a geodynamic perspective Owing to its location close to successive plate margins Iberia has played a pivotal role in the geodynamic evolution of the Gondwanan Rheic Pangea Tethys and Eurasian plates over the last 600 Ma of Earth's history The geological record starts with the amalgamation of Gondwana in the Neoproterozoic which was succeeded by the rifting and spreading of the Rheic ocean its demise which led to the amalgamation of Pangea in the late Paleozoic the rifting and spreading of several arms of the Neotethys ocean in the Mesozoic Era and their ongoing closure which was responsible for the Alpine orogeny The significant advances in the last 20 years have increasingly attracted international interest in exploring the geology of the Iberian Peninsula This volume focuses on the Cenozoic basins of the Iberian Geology and

consequently the most recent sedimentary features in the Iberian Geology apart of the active ones In this book you will find a detailed explanation of the alpine foreland basins the extension of the west Mediterranean as well as the latest magmatism in Iberia Geology and Landscapes of the Eastern Pyrenees Marc Calvet, Magali Delmas, Yanni Gunnell, Bernard

Laumonier, 2022-06-04 This book provides a synthesis of the physiography and geodynamics of the entire Pyrenean orogen and its foreland basins providing the big picture structure of the orogen and chronology of its formation overview of its post orogenic evolution and Quaternary and recent landscape history One part of the book proposes a 6 7 day itinerary across the eastern and east central Pyrenees two areas that currently provide the richest best documented and most carefully curated database on the post orogenic evolution of the mountain belt The book deals with three complementary topics i geodynamics i e the long term post orogenic evolution of the Pyrenees since the declining stages of tectonic collision ca 30 million years ago and within the wider reference frame of Iberia the Western Mediterranean and the Atlantic margin ii geomorphological processes and landforms that have conspired to shape the eastern part of the French and Spanish Pyrenees in response to base level and climate related changes over than same time period iii geoheritage i e educational vignettes of the flagship landscape units and typical geological sections of the study area Written as a field guide it is designed to help readers to construct discovery based itineraries through the region with options and variants depending on time and physical ability allowing them to appreciate the key landscape and geoheritage features over the course of 1 week with potential for much more This GeoGuide is primarily aimed at confirmed geoscientists from most disciplines in Earth science at postgraduate students engaged in field studies and at curiosity driven educated amateurs keen to enhance their understanding of spectacular or enigmatic features encountered on their travels

Passive Margins, Cratonic Basins and Global Tectonic Maps David G. Roberts, 2012-05-29 Expert petroleum geologists David Roberts and Albert Bally bring you Regional Geology and Tectonics Phanerozoic Passive Margins Cratonic Basins and Global Tectonic Maps volume three in a three volume series covering Phanerozoic regional geology and tectonics Its key focus is on both volcanic and non volcanic passive margins and the importance of salt and shale driven by sedimentary tectonics to their evolution Recent innovative research on such critical locations as Iberia Newfoundland China and the North Sea are incorporated to provide practical real world case studies in regional geology and tectonics The vast amount of volcanic data now available to form accurate hydrocarbon assessments and analysis at passive margin locations is also included into this thorough yet accessible reference Named a 2013 Outstanding Academic Title by the American Library Association s Choice publication A how to practical reference that discusses the impact of the development of passive margins and cratonic basins on the structural evolution of the Earth in regional geology and tectonic applications Incorporates the increased availability of industry data to present regional seismic lines and cross sections leading to more accurate analysis and assessment of targeted hydrocarbon systems Analyses of passive margins and cratonic basins in East

Africa China Siberia the Gulf of Suez and the Laptev Sea in the Russian Arctic provide immediately implementable petroleum exploration applications Summaries of analogue and theoretical models are provided as an essential backdrop to the structure and stratigraphy of various geological settings *Sediment Flux to Basins* Stuart J. Carbonates in Continental Settings, 2009-10-05 This book provides an up to date compilation of the latest research on the petrography facies paleoenvironmental significance and economic aspects of continental carbonates The overall organization of the book first emphasizes the descriptive aspects and processes operating on carbonate deposits in greatly varied settings and then considers applications for basin analysis as well as economic and historical aspects This volume will be a valuable tool for graduate and postgraduate students as well as for experienced researchers The second part volume 62 in this series will deal with the geochemistry diagenesis and applications of carbonates in continental settings Covering the greatly varied aspects of carbonate deposits from continental settings deposits Clear and easy to follow organization Up to date information so readers can find references from the classic literature to the most recent research *Field trip guidebook* Ana Rosa Soria, 1998 **Modeling The Earth For Oil Exploration** Klaus Helbig, 2015-07-14 This volume presents an overview of the results of a European Union integrated program in which approximately two hundred earth scientists participated drawn from all fields related to exploration Two classes of modeling were addressed geological modeling the relationship between the conditions of sedimentation and the resulting reservoir conditions and wave propagation modeling the investigation of wave propagation through media of various degrees of complexity Wave propagation modeling was carried out either mathematically or physically with the most modern tools An important aspect of the project was the inversion of seismic data that is the determination of the parameters of the medium from observations This problem is closely related to modeling since it is based on the inversion of the mathematical steps and often uses modeling for verification and updating The geological data presents novel concepts with a coverage that is both broad in area and in discipline The geophysical investigations are at the leading edge of current research Although detailed results have been published separately by investigators this volume is the only source of reference which summarises the results but incorporating sufficient detail to enable the reader to follow the scientific reasoning
