The Night Sky Companion Tammy Plotner, 2009-02-28 T Plotner The Night Sky Companion DOI 10.1007.978.0.387.79509.6_1.1 Springer Science Business Media LLC 2009 2 TheNightSkyCompanion Welcome fellow traveler to the stars For the next year we will take a journey together across the night sky In these pages you will find lunar features planets meteor showers single and multiple stars open and globular clusters as well as distant galaxies There will be astronomy history to explore famous astronomers to meet and science to learn You will find things here for those who enjoy stargazing with just their eyes binoculars or even the largest of telescopes Although these observing tips are designed with all readers in mind not everyone lives in the same time zone or the same hemisphere and certainly no one has clear skies every night But no matter where you live or who you are it is my hope that somewhere here you find something of interest to keep you looking up Learning the Night Sky If you are new to astronomy it might seem difficult to learn all those stars Relax It's much easier than you think Just like moving to a new city everything will seem unfamiliar at first but with a little help from some maps you will soon be finding your way around like a pro Once you become familiar with the constellations and how they appear to move across the night sky the rest is easy If you do not have maps of your own try visiting your local library or one of many online sites that can generate them They give object positions in great detail

and most have a key of Greek letters to help you understand star hop instructions *Spectroscopy: The Key to the Stars* Keith Robinson, 2007-08-15 While most amateur astronomers know about the red shift have a general idea of the way that the emission and absorption lines in stellar spectra provide an insight into the atomic processes of the star it is unusual to find someone who has any kind of detailed knowledge The reason isn't lack of interest far from it but is because all the books currently available are pitched at professional astronomers and degree students and are to say the least difficult to read This is the first non technical book on this subject written specifically for practical amateur astronomers It includes all the science necessary for a qualitative understanding of stellar spectra but avoids a mathematical treatment which would alienate many of its intended readers Any amateur astronomer who carries out or who is interested in observational spectroscopy and who wants a non technical account of the physical processes which determine the intensity and profile morphology of lines in stellar spectra will find this is the only book written specially for him And of course armchair astronomers who simply want to understand the physical processes which shape lines in stellar spectra will find this book equally fascinating

LXD75 Telescopes Martin Peston, 2010-04-28 I have owned telescopes for over 25 years since I was a young lad I purchased an LXD55 AR 6 Refractor in 2002 and was one of the first to own one in the UK I am also a proud owner of an LXD75 SC 8 Armed with these two very different telescopes I have spent many hours searching the skies for interesting objects using Meade's Autostar Goto facility My motivation to write a book about the LXD Goto telescope series first came from comments about an LXD55 AR 6 Refractor review that was published on the LXD55 com website From then on I have had regular emails from people asking technical questions about the telescope and which model is best suited for them Whilst attending Star parties in the UK I found that many LXD owners would struggle to use them even at a basic level especially if they have

never owned or used an equatorially mounted Goto telescope before Since the first LXD55 models came out in early 2002 owners have struggled to find useful information to help them use the telescopes to the best advantage There have been mixed reactions about its quality and performance Hence this book is directed towards those who are new to Goto and the LXD telescope **The Observer's Guide to Astronomy: Volume 2** Patrick Martinez,1994-09-22 How can you find new minor planets comets and novae How can you use photoelectric detectors to derive the temperatures of stars And how can you predict future eclipses and occultations of stars by minor planets The questions asked by serious amateur astronomers are answered in this authoritative and wide ranging guide first published in 1994 For each topic sound practical methods of observation and the scientific background are given to lead you to better observations Guidelines also show you how to record and catalogue your observations using the recognised professional terminology and classification schemes From the simplest pencil drawings of the moon to observations of the most distant galaxies with state of the art CCD cameras and photoelectric photometers this guide is packed with practical tips for all types of amateur observations It will develop the observational skills of the keen novice and satisfy the more demanding needs of the experienced amateur astronomer
