There are very few concepts that fascinate equally a theoretical physicist studying black holes and a patient undergoing serious mental psychosis. Time undoubtedly can well be ranked among them. For the measure of time inside a black hole is no less bizarre than the perception of time by a schizophrenic who may perceive it as completely suspended, standing still or even reversing its direction. The nature of time is certainly shrouded in profound mystery. This perhaps since the concept entails multifarious and occasionally incongruous facets. No wonder the subject attracts the serious attention of scholars on the one hand and of the lay public on the other. Our Advanced Research Workshop is an excellent illustration of this point as the reader will soon discover. It turned out to be a unique professional forum for an unusually lively, effective and fruitful exchange of ideas and beliefs among 48 participants from 20 countries worldwide selected out of more than a hundred applicants. The present book is based on the select talks presented at the meeting and aims to provide the interested layperson and specialist alike with a multidisciplinary sampling of the most up to date scholarly research on the nature of time. It represents a coherent state of the art volume showing that research relevant to this topic is necessarily interdisciplinary and does not ignore such delicate issues as altered states of consciousness, religion and metaphysics.
