The past three years have witnessed the birth and propagation of a provocative idea in the plant sciences. Its proponents have suggested that higher plants have nerves, synapses, the equivalent of a brain localized

somewhere in the roots, and an intelligence. The idea has attracted a number of adherents, to the extent that meetings have now been held in different host countries to address the topic, and an international society devoted to ‘plant neurobiology’ has been founded. We are concerned with the rationale behind this concept. We maintain that plant neurobiology does not add to our
