Peptide Growth Factors and Their Receptors I Michael B. Sporn, Anita B. Roberts, 2012-12-06 This two volume treatise the collected effort of more than 50 authors represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors the entire field has never been covered in a single treatise It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone person to stay informed on this subject by reading the primary literature At the same time it is becoming increasingly apparent that these substances are of universal importance in biology and medicine and that

the original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artifactual they are in fact the basis of a common language for intercellular communication As a set they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research This treatise is divided into four main sections After three introductory chapters its principal focus is the detailed description of each of the major peptide growth factors in 26 individual chapters

Bonucci, P. Motta, 2012-12-06 The calcified tissues have fundamental functions in the biology of organisms not only because their strength solidity and elasticity permit movement and mechanical activities and protect soft tissues against traumatic forces but also on account of their role in mineral homeostasis For this reason extensive investigation in the last 30 years has provided much to explain the complex chemical and physical processes occurring in cells and matrices composing the skeleton and their alterations in pathological conditions The use of ultrastructural methods such as immunocytochemistry scanning and transmission electron microscopy

cytoautoradiography freeze fracture etching high voltage etc has proven to be of great value when applied to cells and matrix components of bone and cartilage in spite of the technical difficulties due to the hardness of these tissues However available information on this subject is disseminated in a variety of scientific and medical articles This volume is an attempt to collect together the most significant data on the ultrastructure of cartilage and bone in normalcy and pathology Obviously it cannot be a complete report of all these data its principal aim being that of a giving a comprehensive statement of the results concerning the basic structures common to these tissues especially collagen fibrils noncollagenous proteins and proteoglycans and their relationships with the mineral substance for which another volume of this series can also be consulted see Ruggeri A Motta P M eds Principles and Practice of Endocrinology and Metabolism Kenneth L.
