Terrestrial Ecoregions Of The Indopacific:

Terrestrial Ecoregions of the Indo-Pacific Eric D. Wikramanayake, 2002 Terrestrial Ecoregions of the Indo Pacific offers a comprehensive examination of the state of the Indo Pacific s biodiversity and habitats moving beyond endangered or charismatic species to quantify for the first time the number of mammal and bird species including endemics in each ecoregion

Terrestrial Ecoregions of North America Taylor H. Ricketts, 1999 Lauded in the New York Times science section as a sweeping analysis of the ecosystems of the United States and Canada this volume represents an unparalleled source of information and data for scientists and conservationists working in North America Using a rigorous ecoregion based approach rather than the more common state by state analysis a team of scientists from World Wildlife Fund has produced a stunning and comprehensive assessment of the current status of biodiversity in North America north of Mexico Terrestrial Ecoregions of North America begins with six chapters that present the rationale for the ecoregion approach describe the biological distinctiveness of North American ecoregions assess the level of threats facing each present a conservation agenda for the next decade and set forth recommendations for preserving and restoring biodiversity In addition nineteen essays by leading scientists address specific topics such as the effect of cattle on riparian areas and the problem of invasive exotic plant species Following the main text are substantial appendixes that describe each ecoregion in detail including information on unique features of the ecoregion that set it apart from the others its biological distinctiveness threats to habitats and wildlife and important sites for conservation activities that enhance biodiversity conservation in the ecoregion conservation partners working in the ecoregion including addresses and other contact information the relationship of the ecoregion to other classification schemes literature cited for that ecoregion One of the most useful and unique features of the book is the series of thirty full color maps that present essential information about the ecoregions and the biodiversity they contain in a compelling and easily understood graphical format The ecoregion based approach has been adopted by many conservation groups as the most effective way to ward off massive losses of biodiversity and this volume provides a road map to that important new strategy With a significant number of previously unpublished data sets and new analytic approaches Terrestrial Ecoregions of North America is both a guidebook for describing the biological wealth of the continent and a handbook for restoring and conserving it It will be an essential reference for anyone concerned with biodiversity conservation in North America

Dipterocarp Biology, Ecology, and Conservation Jaboury Ghazoul, 2016-09-22 Asian tropical forests are amongst the most diverse on the planet a richness that belies the fact that they are dominated by a single family of trees the Dipterocarpaceae Many other families contribute to Asia s natural diversity but few compare to the dipterocarps in terms of the number and variety of species that occupy the forest canopy Understanding the ecology and dynamics of Asian forests is therefore to a large extent a study of the Dipterocarpaceae This book synthesises our current knowledge concerning dipterocarps exploring the family through taxonomic evolutionary and biogeographic perspectives

Dipterocarp Biology Ecology and Conservation describes the rich variety of dipterocarp forest formations in both the ever wet and seasonal tropics including the less well known African and South American species Detailed coverage of dipterocarp reproductive ecology and population genetics reflects the considerable research devoted to this subject and its particular importance in shaping the ecology of Asian lowland rain forests Ecophysiological responses to light water and nutrients which underlie mechanisms that maintain dipterocarp species richness are also addressed At broader scales dipterocarp responses to variation in soil topography climate and natural disturbance regimes are explored from both population and community perspectives The book concludes with a consideration of the crucial economic values of dipterocarps and their extensive exploitation discussing future opportunities for conservation and restoration This will be a useful resource for senior undergraduate and graduate courses in tropical forest ecology and management as well as professional researchers in tropical plant ecology forestry geography and conservation biology Encyclopedia of the World's Biomes ,2020-06-26

Encyclopedia of the World s Biomes is a unique five volume reference that provides a global synthesis of biomes including the latest science All of the book s chapters follow a common thematic order that spans biodiversity importance principal anthropogenic stressors and trends changing climatic conditions and conservation strategies for maintaining biomes in an increasingly human dominated world This work is a one stop shop that gives users access to up to date informative articles that go deeper in content than any currently available publication Offers students and researchers a one stop shop for information currently only available in scattered or non technical sources Authored and edited by top scientists in the field Concisely written to guide the reader though the topic Includes meaningful illustrations and suggests further reading for those needing more specific information **The National Parks of Indonesia** Jatna Supriatna,Chris Margules,2025-08-30

This book contains information on geographic location and park size climate topography history of each park and biodiversity and ecosystems It also contains information on local communities adjacent to each park or in some cases within the parks and their culture tourism opportunities access tourist facilities nearby and how to find the park office to get a visitor s permit The 55 parks currently declared span the length and breadth of the country They provided the last remaining refuges for many of Indonesia s charismatic species such as tigers elephants rhinoceros and orangutans Terrestrial Ecoregions of

Africa and Madagascar ,2004 As part of a global effort to identify those areas where conservation measures are needed most urgently World Wildlife Fund has assembled teams of scientists to conduct ecological assessments of all five continents Terrestrial Ecoregions of Africa and Madagascar is the latest contribution presenting in a single volume the first comprehensive assessment of biodiversity patterns threats to biodiversity and resulting conservation priorities across the African continent and its islands Looking at biodiversity and threats in terms of biological units rather than political units the book offers a comprehensive examination of African biodiversity across all biomes and multiple taxonomic groups In addition to the seven main chapters the book includes twenty essays by regional experts that provide more depth on key issues as well

as nine detailed appendixes that present summary data used in the analyses specific analytical methodologies and a thorough text description for each of Africa's 119 terrestrial ecoregions. *Terrestrial Ecoregions of Africa and Madagascar* provides a blueprint for conservation action and represents an unparalleled guide for investments and activities of conservation agencies and donor organizations. **Ecology of Indonesian Papua Part Two** Andrew J. Marshall, Bruce M.

Beehler, 2012-06-26 *The Ecology of Papua* provides a comprehensive review of current scientific knowledge on all aspects of the natural history of western Indonesian New Guinea. Designed for students of conservation, environmental workers, and academic researchers, it is a richly detailed text dense with biogeographical data, historical reference, and fresh insight on this complicated and marvelous region. We hope it will serve to raise awareness of Papua on a global as well as local scale and to catalyze effective conservation of its most precious natural assets. New Guinea is the largest and highest tropical island and one of the last great wilderness areas remaining on Earth. Papua, the western half of New Guinea, is noteworthy for its equatorial glaciers, its vast forested floodplains, its imposing central mountain range, its Raja Ampat Archipelago, and its several hundred traditional forest-dwelling societies. One of the wildest places left in the world, Papua possesses extraordinary biological and cultural diversity. Today Papua's environment is under threat from growing outside pressures to exploit its expansive forests and to develop large plantations of oil palm and biofuels. It is important that Papua's leadership balance economic development with good resource management to ensure the long-term well-being of its culturally diverse populace.

Anthropogenic Tropical Forests Noboru Ishikawa, Ryoji Soda, 2019-11-06 The studies in this volume provide an ethnography of a plantation frontier in central Sarawak, Malaysian Borneo. Drawing on the expertise of both natural scientists and social scientists, the key focus is the process of commodification of nature that has turned the local landscape into anthropogenic tropical forests. Analysing the transformation of the space of mixed landscapes and multiethnic communities driven by trade in forest products, logging, and the cultivation of oil palm, the contributors explore the changing nature of the environment, multispecies interactions, and the metabolism between capitalism and nature. The project involved the collaboration of researchers specialising in anthropology, geography, Southeast Asian history, global history, area studies, political ecology, environmental economics, plant ecology, animal ecology, forest ecology, hydrology, ichthyology, geomorphology, and life cycle assessment. Collectively, the transdisciplinary research addresses a number of vital questions: How are material cycles and food webs altered as a result of large-scale land use change? How have new commodity chains emerged while older ones have disappeared? What changes are associated with such shifts? What are the relationships among these three elements: commodity chains, material cycles, and food webs? Attempts to answer these questions led the team to go beyond the dichotomy of society and nature as well as human and non-human. Rather, the research highlights complex relational entanglements of the two worlds abruptly and forcibly connected by human-induced changes in an emergent and compelling resource frontier in maritime Southeast Asia. Endemism in Vascular Plants Carsten Hobohm, 2013-08-23 The book is the first comprehensive analysis of the macroecology and geobotany of endemic vascular plants with case studies and analyses from different regions in the world. Endemism is a pre-extinction phenomenon. Endemics are threatened with extinction. Due to international nature conservation policies and due to the perception of the public, the concept's importance is increasing. Endemism can result from different biological and environmental processes. Depending on the process, conservation measures should be adapted. Endemic vascular plant taxa in the setting of their species composition and vegetation types are important features of landscapes and indicators of the quality of relating habitats. The book is an important basis for biologists, ecologists, geographers, planners, and managers of nature reserves and national parks and people generally interested in nature conservation and biogeography of vascular plants.

Biodiversity Kevin J. Gaston, John I. Spicer, 2013-04-22 This concise introductory text provides a complete overview of biodiversity: what it is, how it arose, its distribution, why it is important, human impact upon it, and what should be done to maintain it. Timely overview of the serious attempts made to quantify and describe biodiversity in a scientific way. Acts as an easy entry point into the primary literature. Provides real-world examples of key issues, including illustrations of major temporal and spatial patterns in biodiversity. Designed primarily with undergraduate students and course lecturers in mind, it will also be of interest to anyone who requires an overview of and entry to the vast literature on these topics.
