

Test Taking Strategies

It is normal to feel a little bit nervous or stressed before a test. Almost everyone does! These proven test-taking strategies can help you feel less stressed and do better on your tests.

#1 Do the Word Problem Questions First

Before you look at any of the other questions, find the word problems, and do these questions first. Word problems take a lot of brain power, more time than simple calculations or multiple choice. So it's best to tackle them when your brain is fresh at the beginning of the test.

#2 Take your time

Don't be this guy! Remember to take your time and double-check your answers. Checking your answers means going back and making sure that your solutions make sense. First, check your multiplication and other operations to be sure you read the question correctly. Then, plug your answer back into the equation if you have solved anything algebraically and see if it works.

#3 Manage your time

Be sure you know how much time is left. For example, if you have 60 minutes to answer 30 multiple choice questions, you have about two minutes for each question. So check the clock and make sure you have enough time to complete every question. Just remember - Do not rush through the test!

#4 Read all questions thoroughly

Always read the question thoroughly and carefully. Make sure you know and understand what the question is asking you. If you don't, raise your hand and ask your teacher for assistance.

#5 Eliminate Answers

Most multiple-choice tests have 2 similar answers and 2 answers that do not make any sense. Eliminate the choices that make no sense by marking a line through them. Then you will only have 2 answer choices to choose from. Solve the problem and choose the best one. Remember that you can also use the answers to help you solve the problem if you are stuck and unsure of what to do.

Berkman,Steven P. Reise,2011-04-12 Bridging an understanding of Statistics and SPSS The text is written in a user friendly language and illustrates concepts that would otherwise be confusing to beginning students and those with limited computer skills Justice Mbizo University of West Florida This unique text helps students develop a conceptual understanding of a variety of statistical tests by linking the ideas learned in a statistics class from a traditional statistics textbook with the

computational steps and output from SPSS Each chapter begins with a student friendly explanation of the concept behind each statistical test and how the test relates to that concept The authors then walk through the steps to compute the test in SPSS and the output clearly linking how the SPSS procedure and output connect back to the conceptual underpinnings of the test By drawing clear connections between the theoretical and computational aspects of statistics this engaging text aids students understanding of theoretical concepts by teaching them in a practical context Please note unfortunately the student resource website for this title is no longer active or available
