# Aechmea

One or two more commonly cultivated *Aechmea*, *A. fasciata*, an epiphyte from Brazil, is extremely colorful. The grey-green, strap-shaped leaves can be up to 40cm (24in) long and are somewhat rounded with short and form a stiff, somewhat upright and open rosette. 30-50cm (12-17in) tall, from which a dense, in common name, the rose plant. From the center of this rosette the flowering stem emerges when the plant is fully mature - usually about two to three years old. It carries a bright pink head of bracts about 10cm (4in) long which remains colorful for many weeks. When it finally dies, the parent plant dies too, but by then offsets will have been produced from the base. These can be detached once they have acquired roots, usually when they are about 10cm (4in) tall. They can be potted up, to flower approximately 18 months later.

There are two variegated forms of *Aechmea*, *A. f. 'Albomarginata'*, which has cream-colored borders to each leaf and *A. f. 'Variegata'* in which the cream stripes run vertically up the leaves.

**Light** Good

**Temperature** Minimum 10°C (50°F), preferably higher; 16-30°C (60-85°F) is optimum

**Moisture** Normal humidity; keep excess of moisture (usually) off of water from spring to summer, quarter full in winter, use soft water at all temperatures.

**Feeding** Liquid feed occasionally via the funnel.

**Propagation** By offsets in 2-3cm (1in) pots of compost. These should be potted up once they have grown to their final size of 12-15cm (5-6in). Try to keep them as warm as possible in summer - for example, around 21-30°C (70-85°F), to ensure successful flowering.

**Problems** Cold conditions cause discolored leaves with brown markings, occasionally susceptible to scale insects.

**Special needs** Not general household cultivation, p. 164
