Peter Pluschke, 2004-09-27 Indoor Air Pollution has become a major topic in environmental research and health Most people spend more than 80% of their time in buildings and are exposed to a broad range of pollutants from indoor sources such as building materials furniture carpets and textiles heating and cooking household and consumer products etc The volume provides a comprehensive review of the major indoor air pollutants volatile organic compounds biocides indoor particles and fibres combustion products and micro organisms and their metabolites Sources and sinks of air pollutants in indoor environments and their chemistry are distinctly different from ambient air pollution even though the latter may influence indoor air quality Adsorption and desorption processes the pollutant source dynamics gas phase reactions and kinetics including the fate and final chemical destiny of chemically unstable intermediate compounds are topics of scientific research as well as the evaluation of their sensory impact and irritation potential Guidelines for assessing indoor pollution and a broad range of analytical methods have been recently developed and are reviewed by internationally renowned scientists The specific characteristics of indoor air pollution in developing countries due to the widespread use of open fires for cooking heating and lighting are analysed as well as the Chinese strategies to address the growing pollution problems by air pollution in its modern building stock

Air Quality in Airplane Cabins and Similar Enclosed Spaces Martin B. Hocking, Diana Hocking, 2005-09-16 The issue of aircraft air quality is attracting considerable attention of late as access to public air travel has expanded exponentially Aircrew and passengers are increasingly concerned about operating and service decisions that could affect their health comfort and safety The editor of this volume invited a wide range of experts to provide an in depth treatment of virtually all aspects of aircraft cabin air quality The topics are covered at a level comprehensible to all who fly as well as being of sufficient depth to be informative to decision makers concerned with purchase design operation and

servicing of passenger aircraft Topics are grouped under Control of Aircraft Cabin Air Quality Possible Effects of Low Humidity Decreased Outside Air Flows and Effects of Some Aircraft Malfunctions on Cabin Air Quality The volume concludes with Air Quality Systems for Related Enclosed Spaces in which chapters cover air quality in buildings ships submarines and spacecraft which provide novel approaches potentially applicable to aircraft *Toxicological Profile for Trichloroethylene*, 1997

Chemical Exchange Between the Atmosphere and Polar Snow Eric W. Wolff, Roger C. Bales, 2013-06-29 Polar ice cores have provided tremendous advances in our knowledge of past climate change They also contain an archive of geochemical data which can certainly delineate some of the forcing factors that govern climate change However our ability to interpret these data is severely curtailed by lack of knowledge of the processes governing the transfer of chemical species from the air to the snow This book outlines the potential and problems of ice core chemistry and discusses the processes involved in air snow transfer It gives the state of current knowledge and an agenda for future research Marine Organic Matter: Biomarkers, Isotopes and DNA J. K. Volkman, 2006-02-09 The oceans contain a great biodiversity of marine organisms They include a rich variety of unusual genes and biochemistries and hence a diverse array of organic compounds ranging from colourful carotenoids and chlorophylls to lipids with structures ranging from the simple to the complex This volume brings together ten chapters on the occurrence and identification of the lipid biomarkers and of pigments in marine waters It describes how they can be used in conjunction with stable isotopes and molecular biology to ascertain the sources and fate of organic matter both natural and pollutant in the sea and underlying sediments The authors are each experts in their field and the chapters provide both an overview of the state of the art and knowledge gaps together with abundant detail to satisfy the needs of specialists and non specialists alike Contaminated Sediments Tarek A. Intercontinental Transport of Air Pollution Andreas Stohl, 2004-06-08 Transboundary transport of air pollution has been a topic of scientific research for several decades and has also been addressed already by environmental policies However the importance of air pollution transport on the largest intercontinental scales has been recognized only recently It was soon found that the meteorological and chemical processes involved in intercontinental pollution transport are distinctly different from those occurring during regional scale transport and thus new scientific methodologies are required for their study In this book leading scientists review the current state of knowledge in this emerging field of research providing the reader with a process understanding of global scale transport and its influence on the atmosphere s chemical composition Long range transport of anthropogenic pollution is contrasted with that of pollution produced by natural processes such as dust storms or forest fires Furthermore

the prospects for international management of intercontinental transport of anthropogenic pollution are discussed Waste Gas Treatment for Resource Recovery Piet Lens, C. Kennes, P. le Cloirec, M. Deshusses, 2006-07-31 The prevention of over exploitation and the efficient use of natural resources are key goals of environmental management in Industry Waste Gas Treatment for Resource Recovery presents the reader with technical ecological and economical aspects of gaseous effluent treatment and resource recovery Practical experience from industry and agriculture is presented the role of newly developed advanced technology in future recycling of gas streams discussed and attention given to criteria for sustainability in gas treatment Detailed analysis of material flows novel process applications and bioreactor designs odour quantification and removal process techniques and European legislations for waste gas discharge and recovery are highlights of the extensive and comprehensive coverage of this book Waste Gas Treatment for Resource Recovery will enable production process and environmental engineers and managers to evaluate internal recycling possibilities which contribute to an economically and environmentally friendly manufacturing processes with reduced pollution loads and waste gas volumes Analysis of material flows e.g. the development of methodologies and techniques to monitor the use and flow of materials on a life cycle basis Novel process applications and bioreactor designs for resource recovery from waste gases Odour quantification techniques and novel odour removal processes European dimension of polluted gas streams and the European legislation for waste gas discharges and recovery **The Atmospheric Chemist's Companion** Peter Warneck, Jonathan Williams, 2012-02-17 This companion provides a collection of frequently needed numerical data as a convenient desk top or pocket reference for atmospheric scientists as well as a concise source of information for others interested in this matter The material contained in this book was extracted from the recent and the past scientific literature it covers essentially all aspects of atmospheric chemistry The data are presented primarily in the form of annotated tables while any explanatory text is kept to a minimum In this condensed form of presentation the volume may serve also as a supplement to many textbooks used in teaching the subject at various universities Global Atmospheric Change and its Impact on Regional Air Quality Ian Barnes, 2012-12-06 The NATO ARW in Irkutsk was an excellent occasion for the coming together of Eastern and Western scientists who are involved in tropospheric science the workshop has greatly contributed to the scientific and social understanding among the participants from the many different countries Many new personal contacts were made which will help to strengthen future collaborations In particular the Lake Baikal area and the Limnological Institute offer splendid opportunities for environmental research which in part is already on going For most participants it was the first time to see the impressive nature of the Lake Baikal region Hopefully there will be a chance for a follow up event in Siberia where researchers from the East and West can again meet and engage in fruitful scientific dialogue The book contains extended abstracts of the lectures and the poster presentations presented at the NATO ARW Global Atmospheric Change and its Impact on Regional Air Quality Irkutsk Lake Baikal Russian Federation August 21-27 2001 The ARW was composed of 22 oral presentations by key lecturers

and 6 additional shorter oral presentations from participants In a special poster session the 36 poster contributions were presented and discussed Unfortunately not all contributors submitted extended abstracts however to compensate two contributions have been added from 2 participants who were originally invited but were unable to attend
