Textures Peace And Security Series 4:

Fundamental and Applied Nano-Electromagnetics Antonio Maffucci, Sergey A. Maksimenko, 2016-04-08 This book presents the most relevant and recent results in the study of Nanoelectromagnetics a recently born fascinating research discipline whose popularity is fast arising with the intensive penetration of nanotechnology in the world of electronics applications Studying nanoelectromagnetics means describing the interaction between electromagnetic radiation and quantum mechanical low dimensional systems this requires a full interdisciplinary approach the reason why this book hosts contributions from the fields of fundamental and applied electromagnetics of chemistry and technology of nanostructures and nanocomposites of physics of nano structures systems etc The book is aimed at providing the reader with the state of the art in Nanoelectromagnetics from theoretical modelling to experimental characterization from design to synthesis from DC to microwave and terahertz applications from the study of fundamental material properties to the analysis of complex systems and devices from commercial thin film coatings to metamaterials to circuit components and nanodevices The book is intended as a reference in advanced courses for graduate students and as a guide for researchers and industrial professionals involved in nanoelectronics and nanophotonics applications

Remote Sensing Boris Escalante, 2012-06-13 This dual conception of remote sensing brought us to the idea of preparing two different books in addition to the first book which displays recent advances in remote sensing applications this book is devoted to new techniques for data processing sensors and platforms We do not intend this book to cover all aspects of remote sensing techniques and platforms since it would be an impossible task for a single volume Instead we have collected a number of high quality original and representative contributions in those areas

The Middle Ages in Texts and Texture Jason Glenn, 2011-08-02 The Middle Ages in Texts and Texture is an introduction to medieval Europe unlike any other These 26 essays written by accomplished scholars all trained at the University of California Berkeley reflect on medieval texts and the opportunities they present for exploration of the Middle Ages Introduced in a foreword by Thomas N Bisson Harvard University these essays present a textured picture of the medieval world and offer models for how to reflect fruitfully on medieval sources To help orient the reader three maps the editor's introduction and an index are provided

Degradation Assessment and Failure Prevention of Pipeline Systems Gabriella Bolzon, Giovanna Gabetta, Hryhoriy Nykyforchyn, 2020-09-10 This book presents the results of the research project G5055 Development of novel methods for the prevention of pipeline failures with security implications carried out in the framework of the NATO Science for Peace and Security program and explores the lifecycle assessment of gas infrastructures Throughout their service lives pipelines transporting hydrocarbons are exposed to demanding working conditions and aggressive media In long term service material aging increases the risk of damage and failure which can be accompanied by significant economic losses and severe environmental consequences This book presents a selection of complementary contributions written by experts operating in the wider fields of pipeline integrity taken together they offer a

comprehensive portrait of the latest developments in this technological area Atomic Pair Distribution Function Analysis Simon Billinge, Kirsten Jensen, 2023-11-08 Since the early 1990s the atomic pair distribution function PDF analysis of powder diffraction data has undergone something of a revolution in its ability to do just that yield important structural information beyond the average crystal structure of a material With the advent of advanced sources computing and algorithms it is now useful for studying the structure of nanocrystals clusters and molecules in solution or otherwise disordered in space nanoporous materials and things intercalated into them and to look for local distortions and defects in crystals It can be used in a time resolved way to study structural changes taking place during synthesis and in operating devices and to map heterogeneous systems Although the experiments are somewhat straightforward there can be a gap in knowledge when trying to use PDF to extract structural information by modelling This book addresses this gap and guides the reader through a series of real life worked examples that gradually increase in complexity so the reader can have the independence and confidence to apply PDF methods to their own research and answer their own scientific questions The book is intended for graduate students and other research scientists who are new to PDF and want to use the methods but are unsure how to take the next steps to get started **Uniting Electron Crystallography and Powder Diffraction** Ute Kolb, Kenneth Shankland, Louisa Meshi, Anatoly Avilov, William I.F David, 2012-12-20 The polycrystalline and nanocrystalline states play an increasingly important role in exploiting the properties of materials encompassing applications as diverse as pharmaceuticals catalysts solar cells and energy storage A knowledge of the three dimensional atomic and molecular structure of materials is essential for understanding and controlling their properties yet traditional single crystal X ray diffraction methods lose their power when only polycrystalline and nanocrystalline samples are available It is here that powder diffraction and single crystal electron diffraction techniques take over substantially extending the range of applicability of the crystallographic principles of structure determination This volume a collection of teaching contributions presented at the Crystallographic Course in Erice in 2011 clearly describes the fundamentals and the state of the art of powder diffraction and electron diffraction methods in materials characterisation encompassing a diverse range of disciplines and materials stretching from archeometry to zeolites As such it is a comprehensive and valuable resource for those wishing to gain an understanding of the broad applicability of these two rapidly developing fields **Advances in Visual Computing** George Bebis, Richard Boyle, Bahram Parvin, Darko Koracin, Daniela Ushizima, Sek Chai, Shinjiro Sueda, Xin Lin, Aidong Lu, Daniel Thalmann, Chaoli Wang, Panpan Xu, 2019-10-25 This book constitutes the refereed proceedings of the 14th International Symposium on Visual Computing ISVC 2019 held in Lake Tahoe NV USA in October 2019 The 100 papers presented in this double volume were carefully reviewed and selected from 163 submissions The papers are organized into the following topical sections Deep Learning I Computer Graphics I Segmentation Recognition Video Analysis and Event Recognition Visualization ST Computational Vision AI and Mathematical methods for Biomedical and Biological Image Analysis Biometrics Virtual Reality I

Applications I ST Vision for Remote Sensing and Infrastructure Inspection Computer Graphics II Applications II Deep Learning II Virtual Reality II Object Recognition Detection Categorization and Poster **East Asian and Pacific Series**,1967 *Nano-Structures for Optics and Photonics* Baldassare Di Bartolo,John Collins,Luciano Silvestri,2014-10-06 The contributions in this volume were presented at a NATO Advanced Study Institute held in Erice Italy 4 19 July 2013 Many aspects of important research into nanophotonics plasmonics semiconductor materials and devices instrumentation for bio sensing to name just a few are covered in depth in this volume The growing connection between optics and electronics due to the increasing important role plaid by semiconductor materials and devices find their expression in the term photonics which also reflects the importance of the photon aspect of light in the description of the performance of several optical systems Nano structures have unique capabilities that allow the enhanced performance of processes of interest in optical and photonic devices In particular these structures permit the nanoscale manipulation of photons electrons and atoms they represent a very hot topic of research and are relevant to many devices and applications The various subjects bridge over the disciplines of physics biology and chemistry making this volume of interest to people working in these fields The emphasis is on the principles behind each technique and on examining the full potential of each technique *Environmental and Food Safety and Security for South-East Europe and Ukraine* Ksenija Vitale,2012-02-07 This book covers important aspects of the field of food security and safety ranging from fundamental production through advanced water treatment technologies and detection of novel pollutants to management and policy making The discussion strives to develop an integrated approach to solving the associated problems by simultaneously considering sociological ecological and economic aspects Special focus is on the environmental management systems that should be integrated in the processes of environmental risk assessment Also addressed are other technologies applied in the service of detecting preventing and monitoring possible threats to food security and safety With its variety of subjects this volume can serve both as a textbook for advanced studies and as a useful reference source for professionals
