

## **THE REVISED DIAGNOSTIC INTERVIEW FOR BORDERLINES: DISCRIMINATING BPD FROM OTHER AXIS II DISORDERS**

Mary C. Zanarini, EdD, John G. Gunderson, MD,  
Frances R. Frankenburg, MD, and Deborah L. Chauncey, AB

The Diagnostic Interview for Borderlines (DIB) was revised to sharpen its ability to discriminate between clinically diagnosed borderline patients and patients with other types of Axis II clinical diagnoses. The discriminant power of both the revised DIB (DIB-R) and the DIB itself was then tested in a sample of 237 inpatients and outpatients given an Axis II diagnosis by their therapists. The DIB-R was administered blind to clinical diagnosis, while a DIB score was independently derived from DIB-R and other data using a predetermined scoring algorithm. At a cutoff of 8, the DIB-R had a sensitivity of .82, a specificity of .80, a positive predictive power of .74, and a negative predictive power of .87. Overall, these conditional probabilities compare favorably to those obtained for the DIB at its standard cutoff of 7: sensitivity = .97, specificity = .27, positive predictive power = .47, and negative predictive power = .93. They also compare favorably with those obtained in studies that used semistructured or self-report instruments based on DSM-III or DSM-III-R criteria for BPD.

There are currently five diagnostic instruments designed solely to identify patients with borderline personality disorder (BPD): the Diagnostic Interview for Borderlines (DIB) (Gunderson, Kolb, & Austin, 1981), the Borderline Personality Scale (BPS) (Perry & Cooper, 1985), the Schedule for Borderline Personalities (SBP) (which is the second half of the Schedule for Interviewing Borderlines, or SIB) (Baron & Gruen, 1980), the Borderline Syndrome Index (BSI) (Conte, Plutchik, Karasu, & Jerrett, 1980), and the Combined Criteria Instrument (CCI) (Nurnberg, Huri, Feldman, & Suh, 1987). Although each of these instruments attempts to identify clinically diagnosed borderline patients using criteria sets that are somewhat different than that of DSM-III, four different formats are used. The DIB is a semistructured interview, the BPS and the SBP are structured interviews, the BSI is a self-report questionnaire, and the CCI is a checklist that is rated after an unstructured clinical interview.

From the Psychosocial Research Program, McLean Hospital, Belmont, Massachusetts; and the Department of Psychiatry, Harvard Medical School, Boston, Massachusetts. Address reprint requests to Dr. M. C. Zanarini, McLean Hospital, 115 Mill Street, Belmont, Massachusetts 02178.
