Sky Atlas :

The Sky Atlas Edward Brooke-Hitching, 2019-10-17 After the enormous international success of *The Phantom Atlas* and *The Golden Atlas* Edward Brooke Hitching's stunning new book unveils some of the most beautiful maps and charts ever created during mankind's quest to map the skies above us. This richly illustrated treasury showcases the finest examples of celestial cartography, a glorious genre of map making often overlooked by modern map books as well as medieval manuscripts, masterpiece paintings, ancient star catalogues, antique instruments and other appealing curiosities. This is the sky as it has never been presented before: the realm of stars and planets but also of gods, devils, weather wizards, flying sailors, medieval aliens, mythological animals and rampaging spirits. The reader is taken on a tour of star-obsessed cultures around the world, learning about Tibetan sky burials, star-covered Inuit dancing coats, Mongolian astral prophets and Sir William Herschel's 1781 discovery of Uranus, the first planet to be found since antiquity. Even stranger are the forgotten stories from European history like the English belief of the Middle Ages in ships that sailed a sea above the clouds, 16th century German UFO sightings and the Edwardian aristocrat who mistakenly mapped alien-made canals on the surface of Mars. As the intricacies of our universe are today being revealed with unprecedented clarity, there has never been a better time for a highly readable book as beautiful as the night sky to contextualise the scale of these achievements for the general reader.

Atlas of Science Katy Börner, 2010-09-17 Science maps that can help us understand and navigate the immense amount of results generated by today's science and technology. Cartographic maps have guided our explorations for centuries, allowing us to navigate the world. Science maps have the potential to guide our search for knowledge in the same way, allowing us to visualize scientific results. Science maps help us navigate, understand and communicate the dynamic and changing structure of science and technology, help us make sense of the avalanche of data generated by scientific research. Today's *Atlas of Science* featuring more than thirty full-page science maps, fifty data charts, a timeline of science mapping milestones and 500 color images serves as a sumptuous visual index to the evolution of modern science and as an introduction to the science of science, charting the trajectory from scientific concept to published results. *Atlas of Science* based on the popular exhibit *Places*, a guide to a PhD thesis that resembles a subway map, the structure of science as revealed in a map of citation relationships in papers published in 2002, a visual periodic table, a history flow visualization of the Wikipedia article on abortion, a globe showing the worldwide distribution of patents, a forecast of earthquake risk, hands-on science maps for kids and many more. Each entry includes the story behind the map and biographies of its makers. Not even the most brilliant minds can keep up with today's deluge of scientific results. Science maps show us the landscape of what we know.

A. C. Perryman,2009 The Hipparcos satellite developed and launched by the European Space Agency ESA in 1989 was the first space mission dedicated to astrometry the accurate measurement of positions distances and proper motions of stars Amongst the key achievements of its measurements are refining the cosmic distance scale characterizing the large scale kinematic motions in the Solar neighborhood providing precise luminosities for stellar modelling and confirming Einstein's prediction of the effect of gravity on starlight This authoritative account of the Hipparcos contributions over the last decade is an outstanding reference for astronomers astrophysicists and cosmologists It reviews the applications of the data in different areas describing the subject and the state of the art before Hipparcos and summarizing all major contributions to the topic made by Hipparcos It contains a detailed overview of the Hipparcos and Tycho Catalogues their annexes and their updates Each chapter ends with comprehensive references to relevant literature *The Making of History's Greatest Star Map* Michael Perryman,2010-03-20 From prehistoric times mankind has looked up at the night sky and puzzled at the changing positions of the stars How far away they are is a question that has confounded scientists for centuries Over the last few hundred years

many scientific careers and considerable resources have been devoted to measuring their positions and motions with ever increasing accuracy And in the last two decades of the 20th century the European Space Agency developed and launched the Hipparcos satellite around which this account revolves to carry out these exacting measurements from space What has prompted these remarkable developments Why have governments been persuaded to fund them What are scientists learning from astronomy s equivalent of the Human Genome Project This book traces the subject s history explains why such enormous efforts are considered worthwhile and interweaves these with a first hand insight into the Hipparcos project and how big science is conducted at an international level The involvement of amateur astronomers and the Hipparcos contributions to climate research death stars passing close to the Sun and the search for extra solar planets and even intelligent life itself are some of the surprising facets of this unusual space mission First Light and Beyond D. Jenkins,2015-07-28 Amateur astronomers who have been disappointed by the results of an observing session can take comfort in the guidance of this book which advises how to still gain useful experience in seemingly failed nights at the telescope In a world with imperfect seeing conditions incredible observing sessions are often mixed with less inspiring ones discouraging the amateur observer This book is designed to minimize subsequent disappointment for astronomers who encounter a few bad observing sessions helping novice observers take something worthwhile away each and every time they go out under the night sky regardless of the observations that were originally planned Almost every observer remembers his first sight of ringed Saturn hanging in the blackness of space Practitioners agree that there is something special about visual observing Real time observations at the eyepiece can provide fleeting yet intense feelings that connect us with the universe in unique ways But when expectations aren t met at the eyepiece there are other ways to profit from the practice of astronomy These rewards though less showy are well worth cultivating This is a book that will help the reader see what constitutes a successful visual observing session It explains the nature of the objects that the observer is seeing and advises how best to use their equipment There are many hints and tips about how best to locate recall and record observations including suggestions for trips to areas where there are dark skies and to public observatories Amateur astronomy is a journey from the urban backyard all the way to dark rural skies and with this guide the journey can be smooth **Galaxies**
