The Human Connectome Kostas N. Fountoulakis, 2022-12-08 This book constitutes the end result of 20 years long effort that goes beyond a Psychiatrist s standard clinical training and education even that of a Psychiatrist that follows an academic career Trying to explain how the human mind works is hard and the heterogeneity of the audience make the attempt even more difficult There is a conceptual difference between the words brain and mind and this makes the effort even more difficult since the present book tries to preserve the strict scientific approach concerning all the topics discussed The work elaborates and tries to answer questions frequently phrased by audiences in teaching classes and in conferences and does not avoid any question In order to achieve this goal it is structured in chapters all the way from the molecule and the cell to consciousness and free will The book targets mainly the mental health care professionals as an audience and to a lesser extend the other health professionals It is written according to the author s view concerning the training and educational needs of Psychiatrists and Psychologists and to a lesser degree of Neurologists and Neuroscientists in general

Exploring the Landscape of the Mind Stephen S. Clark, 2017-04-19 This book is based on the premise that humankind is first and foremost the outcome of the process of biological evolution Recognition of this is fundamental to our understanding of who we are and how we behave All living things have evolved the physical and mental attributes that promote their prospects for survival they are good at doing the things that enable them to pass on their genes to succeeding

generations and we are no exception Of course through the development of culture we have gained some freedom from our biological origins Nevertheless evolution has constructed the foundation upon which culture is built The first part of the book *Ourselves Interacting with the World* presents an overview of the main capabilities that evolution has endowed us with and that enable us to interact with the environment in advantageous ways This includes our senses which act as windows on the world and also of great importance our emotions and ability to remember Our ability to think is perhaps the crowning achievement of our evolutionary journey and of course we must be able to act in a timely and effective manner The second part of the book *Living Together* traces the history of how we became social creatures To be truly human we had to be capable of sharing and cooperation We also needed to be able to control our aggressiveness and talent for deception We settled down making the transition from hunter gatherers to urban dwellers and agreed upon values and norms of behavior that enhanced our ability to get along Ultimately we came to see good and bad as a morality of right and wrong further augmenting group cohesiveness In the final part of the book *Challenges and Opportunities* attention turns to a consideration of the constraints and possibilities that must be considered in looking to the future These realities can be seen to play out in four social arenas the pursuit of fairness the seeking of justice the interplay of political beliefs and good government and ultimately a united society that is at the same time a true community Our quest for these things will be greatly aided by a deep knowledge and appreciation of our evolutionary past and the indelible imprint it has left upon us It may even lead us to that most elusive of all things happiness

Body and Time Bianca Maria Pirani, Thomas S. Smith, 2014-10-02 *Body and Time* is an innovative and concise survey of penetrating essays conceptualizing the body as a physiological system embedded in a social network In its complex and multilayered structure it is aligned to and overlaps with other related functions Contributors to this publication are members of the International Sociological Association Research Committee 54 *The Body in the Social Sciences* and their contributions specifically refer to the RC54 Mid Term Conference *The Mobile Interface and Social Change* held at Sapienza University of Rome 6 December 2012 What distinguishes the architecture of the book is that collectively it constitutes a challenge to the digital media paradigm in which the body is treated simply as a two dimensional icon of space and time a relatively free form with all kinds of narratives generated by the multimedia Order in sequence should indeed be the key phrase incorporating four incisive problems dealt with in the thirteen chapters forming the body of the book identity temporality hierarchy and territoriality In short the volume demonstrates how fundamentally different ways of experiencing time are also determined by the differing cultural use of bodily rhythms a two sided narration namely of space and time Central to the understanding of this interdependence is the study of interpersonal synchronization increasing knowledge through the investigation of how rhythm music chants dance prayer and other harmonizing practices support social integration This book will attract wide interest especially from students researchers and academics in the social sciences neurosociology digital studies and further afield
