Some Birds And Mammals Of Africa:

Some Birds and Mammals of Africa Axel Amuchástegui, Hilary Hook, 1979

Mammals of Africa: Volume I Jonathan Kingdon, 2014-11-20 Mammals of Africa MoA is a series of six volumes which describes in detail every currently recognized species of African land mammal. This is the first time that such extensive coverage has ever been attempted and the volumes incorporate the very latest information and detailed discussion of the morphology, distribution, biology and evolution, including reference to fossil and molecular data of Africa's mammals. With more than 1 160 species and 16 18 orders, Africa has the greatest diversity and abundance of mammals in the world. The reasons for this and the mechanisms behind their evolution are given special attention in the series. Each volume follows the same format with detailed profiles of every species and higher taxa. The series includes hundreds of colour illustrations and pencil drawings by Jonathan Kingdon highlighting the morphology and behaviour of the species concerned, as well as line drawings of skulls and jaws by Jonathan Kingdon and Meredith Happold. Every species also includes a detailed distribution map. Edited by Jonathan Kingdon, David Happold, Tom Butynski, Mike Hoffmann, Meredith Happold and Jan Kalina and written by more than 350 authors, all experts in their fields, Mammals of Africa is as comprehensive a compendium of current knowledge as is possible. Extensive references alert readers to more detailed information. This first volume in the series comprises eight introductory chapters covering topics such as evolution, geography and geology, biotic zones, classification, behaviour and morphology. The rest of the book is devoted to the Afrotheria, a grouping that comprises six orders and 49 species: these are the hyraxes, elephants, manatees, otter shrews, golden moles, sengis, elephant shrews and Aardvark.

Mammals of Africa Jonathan Kingdon, David Happold, Thomas Butynski, Michael Hoffmann, Meredith Happold, Jan Kalina, 2013-05-23 WINNER OF THE 2014 DARTMOUTH MEDAL AWARDED BY THE AMERICAN LIBRARY ASSOCIATION. Mammals of Africa represents a high water mark not just in mammalogy but in scientific publishing overall. Magnificent. Tim Flannery, Macquarie University, Sydney. The Rainforests of West Africa MARTIN, 2013-11-11 Nowhere else in the world did industrialized countries leave such early marks in the rainforest as in West Africa Past and present developments here are in one way or the other significant for rainforests on other continents as well West Africa is a pioneer in both a good and a bad sense This is reason enough to take a closer look at the history of moist tropical West Africa Until recently no one really seemed to be interested in the rainforests except for a few specialists The world's scientific community neglected to study the incalculable riches of tropical forests to make the public aware of them and their due importance Although interdisciplinary research has been a popular topic for some decades now it was not applied to just the most complex habitat on earth Scientists from all fields studied only that which was easiest to record seemingly blind to a myriad of details awaiting closer examination Botanists went about establishing their herbariums and paid much too little attention to the vegetation as a whole or to the significance of useful plants for local populations Zoologists too busied themselves with collecting and describing species Anthropologists on the other hand tended to overlook faunal details in their ignorance of the animal world they wrote of tigers and deer in Africa And finally foresters saw neither the forest nor the trees for the timber and even confused rainforests with monocultures of fir trees

The Hunters Or the Hunted? C. K. Brain, 1983-08 Amongst scientists involved in taphonomy C K Brain stands out as the pioneer this impressive book is a statement of his investigations The Hunters or the Hunted is a very important book for paleoanthropology It presents the first thorough analysis of the Sterkfontein Valley assemblages contributes significantly to the resolution of lingering controversies and by placing the old information in a fresh perspective enables new and more sophisticated questions to be asked not only of the South African material but of similar assemblages elsewhere Another contribution is that it reinforces the recent change in feelings as to what constitutes data for the value of looking at fossil and contemporary bones as closely as this is clear Brain urges the necessity of recovering fossils with a high regard for subtle detail I hope excavators of any vertebrate fossil site will be persuaded to follow his advice and pay more attention to these features of bone accumulations that have been previously neglected for taphonomy can be a powerful tool in elucidating the problems of fossil assemblages especially when handled with the care and caution that Brain brings to the subject Andrew Hill Nature
