Some Truer Method Frank Durham, Robert D. Purrington, 1990 Through the lens of Chinese food the authors address recent theories in social science concerning cultural identity ethnicity boundary formation consumerism and globalization and the invention of local cuisine in the context of rapid culture change in East and Southeast Asia *A Chaos of Delight* Geoffrey Dobson, 2016-06-16 Humans throughout history have sought ways of understanding their place within the world Religion science and myth have been at the forefront of this quest for meaning *A Chaos of Delight* examines how various cultures from the early Sumerians Egyptians and Greeks to contemporary Western society have looked at the same phenomena and devised totally different world views The rise of modern science is examined alongside questions of evolution and the origins of life This comprehensive volume is an essential read for students and scholars interested in the history of ideas and the role of religion science and myth in the development of Western thought **The Cambridge Companion to Galileo** Peter Machamer, 1998-08-13 Not only a hero of the scientific revolution but after his conflict with the church a hero of science Galileo is today rivalled in the popular imagination only by Newton and Einstein But what did Galileo actually do and what are the sources of the popular image we have of him This 1998 collection of specially commissioned essays is unparalleled in the depth of its coverage of all facets of Galileo's work A particular feature of the volume is the treatment of Galileo's relationship with the church It will be of interest to philosophers historians of science cultural historians and those in religious studies *Physics and Speculative Philosophy* Timothy E. Eastman, Michael Epperson, David Ray Griffin, 2016-02-22 Through both an historical and philosophical analysis of the concept of possibility we show how including both potentiality and actuality as part of the real is both compatible with experience and contributes to solving key problems of fundamental process and emergence The book is organized into four main sections that incorporate our routes to potentiality 1 potentiality in modern science history and philosophy quantum physics and complexity 2 Relational Realism ontological interpretation of quantum physics philosophy and logic 3 Process Physics ontological interpretation of relativity theory physics and philosophy 4 on speculative philosophy and physics limitations and approximations process philosophy We conclude that certain fundamental problems in modern physics require complementary analyses of certain philosophical and metaphysical issues and that such scholarship reveals intrinsic features and limits of determinism potentiality and emergence that enable among others important progress on the quantum theory of measurement problem and new understandings of emergence Geometry and Experimental Method in Locke, Newton and Kant Mary Domski, 2003 **The Cambridge Companion to Newton** Rob Iliffe, George E. Grotesque Visions Thomas O. Haakenson, 2021-05-06 Grotesque Visions focuses on the radical avant garde interventions of Salomo Friedl nder aka Mynona Til Brugman and Hannah Hoch as they challenged the questionable practices and evidentiary claims of late 19th and early 20th century science Demonstrating the often excessive measures that pathologists anthropologists sexologists and medical professionals went to present their research in a seemingly unambiguous way this volume shows how Friedl nder Mynona Brugman Hoch and other Berlin based artists used the artistic grotesque to criticize satirize and subvert a variety of forms of supposed scientific objectivity The volume concludes by examining the exhibition Grotesk 130 Jahre Kunst der Frechheit Comic Grotesque Wit and Mockery in German Arts 1870 1940 In contrast to the ahistorical and amorphous concept informing the exhibition Thomas O Haakenson reveals a unique deployment of the artistic grotesque that targeted specific established and emerging scientific discourses at the turn of the last fin de si cle

Speculative Truth Russell McCormmach, 2004-03-18 With a never before published paper by Lord Henry Cavendish as well as a biography on him this book offers a fascinating discourse on the rise of scientific

attitudes and ways of knowing A pioneering British physicist in the late 18th and early 19th centuries Cavendish was widely considered to be the first full time scientist in the modern sense Through the lens of this unique thinker and writer this book is about the birth of modern science **Critical Rationalism, the Social Sciences and the Humanities** I.C. Jarvie,N. Laor,2013-06-29 An outstanding feature of this book is the broad range of the contributors drawn from Europe the Middle East and North America testifying both to the range of Professor Agassi s interests and the geographical spread of his influence Most contributors use Agassi s ideas as a springboard to engage in debate on issues or offer a contribution in an area that interests him In this volume contributors consider such questions as Agassi s philosophy of education in practice as well as in theory the impact of psychologism in philosophy the origins of critical rationalism in the Bible the debates in economics stimulated by the work of Popper and Agassi and many other topics Besides the special topics the reader gains some sense of the fruitfulness of critical rationalism in the hands of Agassi s friends and colleagues **Accident** Ross Hamilton,2010-10 An accidental glance at a newspaper notice causes Rousseau to collapse under the force of a vision A car accidentally hits Giacometti and he experiences an epiphany Darwin introduces accident to the basic process of life and Freud looks to accident as the expression of unconscious desire Accident Ross Hamilton claims is the force that mak **The Pendulum** Michael Matthews,Colin F. Gauld,Arthur Stinner,2006-01-19 The pendulum is a universal topic in primary and secondary schools but its full potential for learning about physics the nature of science and the relationships between science mathematics technology society and culture is seldom realised Contributions to this 32 chapter anthology deal with the science history methodology and pedagogy of pendulum motion There is ample material for the richer and more cross disciplinary treatment of the pendulum from elementary school to high school and through to advanced university classes Scientists will value the studies on the physics of the pendulum historians will appreciate the detailed treatment of Galileo Huygens Newton and Foucault s pendulum investigations psychologists and educators will learn from the papers on Piaget teachers will welcome the many contributions to pendulum pedagogy All readers will come away with a new awareness of the importance of the pendulum in the foundation and development of modern science and for its centrality in so many facets of society and culture Literature After Euclid Matthew Wickman,2016-02-16 Literature After Euclid tells the story of the creative adaptation of geometry in Scotland during and after the long eighteenth century Analyzing the work of Scottish literati Matthew Wickman challenges how we perceive the Scottish Enlightenment and the modernist ethos that relegated classical Enlightenment to the dustbin of history **A Companion to the Philosophy of Biology** Sahotra Sarkar,Any Plutynski,2010-11-08 A COMPANION TO THE PHILOSOPHY OF BIOLOGY Sarkar is to be congratulated for assembling this talented team of philosophers who are themselves to be congratulated for writing these interesting essays on so many fascinating areas in philosophy of biology This book will be a wonderful resource for future work Elliot Sober University of Wisconsin Madison Many of the discussions here start with a definition of terms and a historical context of the subject before

delving into the deeper philosophical issues making it a useful reference for students of biology as well as philosophy
Northeastern Naturalist The topics that are addressed are done so well This book will appeal to the advanced student and knowledgeable amateur and may prove useful catalyst for discussion among research teams or those engaged in cross disciplinary studies Reference Reviews A Companion to the Philosophy of Biology offers concise overviews of philosophical issues raised by all areas of biology Addressing both traditional and emerging areas of philosophical interest the volume focuses on the philosophical implications of evolutionary theory as well as key topics such as molecular biology immunology and ecology Comprising essays by top scholars in the field this volume is an authoritative guide for professional philosophers historians sociologists and biologists as well as an accessible reference work for students seeking to learn about this rapidly changing field Revisiting the Origin of Species Thierry Hoquet, 2018-08-06 Contemporary interest in Darwin rises from a general ideal of what Darwin's books ought to contain a theory of transformation of species by natural selection However a reader opening Darwin's masterpiece *On the Origin of Species* today may be struck by the fact that this selectionist view does not deliver the key to many aspects of the book Without contesting the importance of natural selection to Darwinism much less supposing that a fully formed Darwinism stepped out of Darwin's head in 1859 this innovative volume aims to return to the text of the *Origin* itself *Revisiting the Origin of Species* focuses on Darwin as theorising on the origin of variations showing that Darwin himself was never a pan selectionist in contrast to some of his followers but was concerned with other means of modification which makes him an evolutionary pluralist Furthermore in contrast to common textbook presentations of Darwinism Hoquet stresses the fact that *On the Origin of Species* can lend itself to several contradictory interpretations Thus this volume identifies where rival interpretations have taken root to unearth the ambiguities readers of Darwin have latched onto as they have produced a myriad of Darwinian legacies each more or less faithful enough to the originator's thought Emphasising the historical features complexities and intricacies of Darwin's argument *Revisiting the Origin of Species* can be used by any lay readers opening Darwin's *On the Origin of Species* This volume will also appeal to students and researchers interested in areas such as Evolution Natural Selection Scientific Translations and Origins of Life

Instruments and the Imagination Thomas L. Hankins, Robert J. Silverman, 2014-07-14 Thomas Hankins and Robert Silverman investigate an array of instruments from the seventeenth through the nineteenth century that seem at first to be marginal to science magnetic clocks that were said to operate by the movements of sunflower seeds magic lanterns ocular harpsichords machines that played different colored lights in harmonious mixtures Aeolian harps a form of wind chime and other instruments of natural magic designed to produce wondrous effects By looking at these and the first recording instruments the stereoscope and speaking machines the authors show that scientific instruments first made their appearance as devices used to evoke wonder in the beholder as in works of magic and the theater The authors also demonstrate that these instruments even though they were often tricks were seen by their inventors as more than trickery In the view of

Athanasius Kircher for instance the sunflower clock was not merely a hoax but an effort to demonstrate however fraudulently his truly held belief that the ability of a flower to follow the sun was due to the same cosmic magnetic influence as that which moved the planets and caused the rotation of the earth The marvels revealed in this work raise and answer questions about the connections between natural science and natural magic the meaning of demonstration the role of language and the senses in science and the connections among art music literature and natural science Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

The Language of Nature Geoffrey Gorham, Benjamin Hill, Edward Slowik, C. Kenneth Waters, 2016-06-15 Galileo's dictum that the book of nature is written in the language of mathematics is emblematic of the accepted view that the scientific revolution hinged on the conceptual and methodological integration of mathematics and natural philosophy Although the mathematization of nature is a distinctive and crucial feature of the emergence of modern science in the seventeenth century this volume shows that it was a far more complex contested and context dependent phenomenon than the received historiography has indicated and that philosophical controversies about the implications of mathematization cannot be understood in isolation from broader social developments related to the status and practice of mathematics in various commercial political and academic institutions Contributors Roger Ariew U of South Florida Richard T W Arthur McMaster U Lesley B Cormack U of Alberta Daniel Garber Princeton U Ursula Goldenbaum Emory U Dana Jalobeanu U of Bucharest Douglas Jesseph U of South Florida Carla Rita Palmerino Radboud U Nijmegen and Open U of the Netherlands Eileen Reeves Princeton U Christopher Smeenk Western U Justin E H Smith U of Paris 7 Kurt Smith Bloomsburg U of Pennsylvania
