The Dinosaurs A New Discovery:

The Dinosaurs Janet Stewart, Chris Walker, Norman Shrive, 1989
Andrew Norman, 2025-01-16 Explores the captivating history of dinosaurs their reign extinction and presents a new theory on how certain species survived their cataclysmic end The dinosaurs are a source of endless fascination and each new generation is inspired and enchanted by images of these wondrous and awe inspiring creatures that dominated the Earth eons of time ago The smallest was the size of a chicken the largest on record the titanosaur *Argentinosaurus huinculensis* weighed about 95 tons fifteen times as much as an African bull elephant today s largest terrestrial creature Dinosaurs ruled the Earth for no less than 181 million years about 600 times longer than *Homo sapiens* have existed on the planet *Homo sapiens* is defined as the primate species to which modern humans belong the first modern humans having evolved in Africa about 300 000 years ago Today the consensus is that the dinosaurs became extinct when a meteorite impacted with the Earth 66 million years ago covering it with a thick layer of soot and throwing up enormous quantities of dust which caused the sky to darken and photosynthesis on which all terrestrial animals ultimately depend for their survival to cease The unanswered question however is how did mammals reptiles and birds which are the only species of dinosaur to survive escape this holocaust An entirely new theory is put forward for the first time to explain this mysterious and intriguing phenomenon
