remain committed over nearly a decade When planning for such commitments investment managers and researchers are faced with practical questions such as How to measure and control the real exposure to private assets How to forecast cash flows for commitments to private capital funds What ranges for their returns and lifetime are realistic and how can the investor's skill be factored in Over which dimensions should a portfolio be diversified and how much diversification is enough How can the impact of co investments or secondaries be modelled How to design pacing plans that lead to resilient and efficient portfolios What stress scenarios should be considered and how can they be applied These are just examples of the many questions for which answers are provided The Art of Commitment Pacing describes established and new methodologies for building up and controlling allocations to such investments This book offers a systematic approach for building up and controlling allocations to such investments The Art of Commitment Pacing is a valuable addition to the libraries of investment managers as well as portfolio and risk managers involved in institutional investment The book will also be of interest to advanced students of finance researchers and other practitioners who require a detailed understanding of forecasting and portfolio management methodologies
